2 GE MPI HT UHF crystal radios
2 channel radios on different frequencies. 2 batteries, 2 antennas
and one standard rate charge unit for 1 radio and one battery.

Good condition.

$50 + COD from Boston.
Thanks for reading this!!

2. Comet CFX-324 Tri-plexer - $60

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-01 00:00:00 UTC
From: Steven Ross <stevenross@mail.earthlink.net>
Message-ID: <34830B97.14D5@mail.earthlink.net>

Comet CFX-324

connector 1 1.3-150mhz
connector 2 200-320 mhz
connector 3 390-500 mhz

Excellent condition. Was used with Kenwood 742 in base configuration.

$60+COD.

Steve Ross

3. Re: FT-847 (again!)

Colin,

If the rumors are true, the FT847 effectively ruins the
price/performance ratio across the HF/VHF lines! We'll have to see
what develops, but unless the price is above $2000, <all> new
radios will be expected to have these features.

73,
Don Rasmussen WB8YQJ/6

Go to the Kenwood site, and then to the FTP section, they have a
bulletin on this very problem. It describes the complete fix.

4-motorola radios.

3-MX 360's Model #H35AAU515OAN 800mhz radios/receive frequencies of 860.88750,859.88750,858.88750FS,857.88750,856.88750. Radios are cosmetically ok but etched ID on faceplates. Condition of transmitters is unknown.

1-mx310 model #H24AAB3110A uhf 1 channel unit
with tx frequency of 465.775 and receive of 460.775. PL tone 2A. This radio is in good condition although has ID etched on front panel. Transmit and receive is fine.

1-fair battery. Antennas for the UHF and 2 for the 800 mhz.
1 mx speaker mike. 3 plastic holsters. $75 for all + COD shipping.

>The small usage of CTCSS does not make us "very backward", in my opinion.

Having read the above, you have confirmed that I am correct in regarding
the UK as very backward. Your attitude is sadly typical of UK amateurs
:-(

CTCSS offers a safety advantage to mobile operators who do not have to
fumble for the tone burst button.

In addition, under lift conditions, it helps prevent a tone bringing up
more than one repeater.

In some situations where there is interference on the repeater input
(from pager tx, etc), CTCSS only access does prevent the repeater being
kept open by the interference (as happens on GB3WL).

Unlike that weird modern liberal commie pinko digital radio stuff
you despise - which actually does work better than the old analogue
stuff - HDTV and all that goes with it has always sounded more like
a marketing ploy to me, a way of getting people to buy more electronic
goodies.

People just don't buy picture quality (look at the slow sales of
laserdiscs and their paraphernalia, also the slow sales of 16:9
tv sets), which largely negates the allure of HDTV. Modern tv sets
last too long. So key people have been persuaded that HDTV is the
Next Big Thing, to separate consumers from their money. It's not
the first planned technological obsolescence, nor will it be the
last, I'm sure.

Whether or not hams adopt digital technology is irrelevant; the
real heresy is the way a supposedly technical hobby has its head
so firmly buried in the sands of technology.

I don't intend to break the law, so, please discuss FM transmitters within legal limit only. Transmitting without permit is very illegal. Don't take your chance.

Thank you all of you. It really helps.

James,

If you wait until 1st Quarter of next year, ICOM is coming out with a triband HT (6/2/440). I believe its the T8 and should come in under $400. You can see it on the ICOM Japan home page (sorry, don't have the URL but someone else on the newsgroup might have it).

Not anymore. Most are able to vote, some even to bear arms again.
Federal prison is usually pretty good. The standards are higher, and
the food is better. Most federal prisons now have family visits
with time for sex and a haircut.

The one you want to stay away from, is the Oklahoma City holding
facility. Senator Nichols is here this week trying to figure out
how a prisoner was beaten, head slit open, and blood smeared all
over the walls, was pronounced dead of suicide. The guy was a
petty criminal.

Since more laws are being created every day (mostly contraband laws,
such as Freon, Video Tape Rentals, listening to prohibited frequencies,
etc) most of us will spend time in prison before we die.

Just look at all the crooks in Washington. Most never even were
disbarred.

FYI

Steve

16. Icom 735 problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-01 00:00:00 UTC
From: John Dinkel <jdinkel@mum.edu>
Message-ID: <34838448.ACD@mum.edu>
Source record: 160405

I have a problem with my IC-735. When I touch the agc button or certain other buttons or even the display panel, the S-meter goes dead. Touching again may bring it back. ICOM said it was probably due to static electriciy or just human voltage and the dry weather but they had no solution. And it is anoying. Can you help? Otherwise, the radio works great.

>additional features, is the FT-1000MP worth the $1000 additional price tag as compared
>to the FT-920. It's a question that I'm asking myself as I look for a new rig.

These are rigs of an entirely different class, so comparisons just
won't work. It depends on your requirements. If you don't require a
serious amount of selectivity and close signal rejection, don't waste
your money on the MP. The MP gives you filter options in each of
2 IF's, you can really do the job this way. The 920 just has one
IF filter option, and the DSP, while it is very nice, is not inside
the AGC loop so you get pumping when other signals show up closeby.
The 920 is a fine little rig, it appears to be an upgrade of the
FT 890 and the 900 as there is the mere single optional filter in
the IF chain. The 1000 series allows optional filters in two
IF's, as well as other serious bells and whistles.

Good luck in any case. I have used both, but own neither!

Source record: 160409

Tom,

I have had mine for about a year now. I use it mainly on 6 meters, but I recently installed a 10/15/20 meter antenna and have had a chance to use it on HF for a couple of weeks.

It is quite a nice rig in comparison with my Icom 735. The noise blanker is not as good as the Icom and I could have wished fro steeper filters, but the narrow filter *does* improve both CW and SSB reception.

It is an easy rig to use. I have only glanced at the manual (mainly to see if there were non-intuitive features and there were a few that I had not discovered), so it would make a good mobile rig. Note, however, that the buttons do not have built-in lights, so you'd need an external light source when operating it - until you know all the buttons in the dark.

What more can I say? The rest works as advertised. Oh yes, as in all small rigs the internal speaker is insufficient for frequent use. I also hooked a good DSP up to mine. It makes it possible to listen to 6 meters during all the long days when the band is closed :-)

I have for sale in very good condition a Startek ATH-15 frequency
counter. Counts up to 1.5 GHz with auto trigger & hold.
Used only a few times.

Will sell with power supply, manual and "leather" case. No telescoping
antenna. For more info and photo refer to AES Winter 1997 catalog.

Sell $150 or trade for 70cm mobile tranceiver.

Thanks.

I found it myself. I opened the top of the radio and looked for Zero Ohm resistors or Jumpers. I Found a Zero Ohm resistor in the front left corner looking down on the radio. Just above it and slightly to the left is an empty resestor position.

Removing the resistor will OPEN - TX
Adding a jumper to the top pads will CLOSE - RX to just the ham bands.
I could not find any way to open the cellular block

Just takes a little GUTS to find these things.
I also posted the mods for the new TH-G71 a few days ago.

I just bought a Kenwood TH-22AT and its seems to work real well for what I know about Ham Radio. I bought it to listen to the Ham traffic until I get my license. I am studying for my Tech. test right now and will take the test in January.

I was wondering if anyone out there has one of these radios and what they think of them. I was also wondering if there were any mods that anyone knows of. I can't wait to get my license and start talking on the radio and hope to get some feedback. Thanks in advance.

Hello,

I just picked up at a German Hamfest this weekend a Spectrum
set made of a Mainframe 7603, a Spectrum Plugin 7L12 and a
tracking Generator TR502.
What I would like to know is how to connect the Tracking to
the Spectrum :-) Is connecting the 2 LOs enough or do I need
to connect something else ?
Also, I am looking for the Manuals for all this equipment's.
I will pay what ever and return the original via FedEx or DHL.

If you can help, please reply directly via eMail.

73 Qro, Daniel.

> --
> Yves Remedios
> When replying by e-mail, please correct my address using the word demon.

Hmm Yves,
Interesting definition you seem to have for "very backward". Tell me, does the 1750hz tone access procedure function correctly with our repeater system? Is it reliable? - Yes? Thought so - therefore, if it aint broken..... The ENHANCEMENT to our system with CTCSS is progressing. For most Amateurs, CTCSS on their repeater has no value add. We found that when we put it onto our local 2 metre (oops meter!) repeater most weren't interested - beacuse most people did not have a rig with the feature fitted and were not going to spend money on the upgrade module when it did not give them (in their circumstances) any benefit over 1750Hz.

The small usage of CTCSS does not make us "very backward", in my opinion.

Alan Glashan

That's all, it's just a couple of 50 ohm SMC terminated coax jumper leads. And I guess you know that you will need a TM502 to power the TR502, or a wider one such as TM503,4,etc if you also want to link in a counter and possible prescaler.

There may also be a provision for a control lead between the analyser and the tracking generator with LEMO connectors. This allows a bright spot to be put on the screen at a point where the sweep is paused to gate a counter, such as a DC509, through the TM backplane, but this lead is not a requirement to get the generator to track.

Regards,

There are 23JS6 and 31JS6 versions, too-- there were designed for
controlled-current heater strings. In a pinch, you could use these
versions (Which oughta cost less) and an external filament transformer
or two (series-connected as appropriate).

40. VX-1R Squelch Problems & Yaesu Service

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-01 00:00:00 UTC
From: dew@gray.cb.att.com
Message-ID: <65ugqi$p7@nntpb.cb.lucent.com>
Source record: 160452

I wanted to report to the net a very
satisfactory result with Yaesu service
on my VX-1R. As reported a few weeks
ago I had the squelch fail after using
the ADMS software to program the radio
for the first time.

I sent my radio in for warranty service.
It took exactly 2 weeks from when I
shipped it (normal UPS ground) until
I received it back (UPS 3 day) repaired.
I consider this excellent service response.

They reported to have replace the CPU in
the radio and the sequelch problem is
now fixed with no re-occurence. This also
fixed the other problem I reported of the
radio refusing to transmit when programmed
for cross band operation.

The only complaint I have now is the
method I used previously of getting the
firmware version (holding down the AR
button when powering on) no longer works.
So I cannot report to the net what firmware
version was in the replacement CPU.

> Apparently the problem is related to the characteristics of the filters, and
> cannot be adjusted out.

Seems to me, for what its worth (not much), that you've been given the
old cop out and runaround. If the filters are so far out of spec on
center frequency or passband shape that its causing this kind of
problem, then Icom ought to replace the filters. And if the filters are
ok, then there is something else broken -- whether the Icom tech can
"tweak it out" or not.. and Icom should do whatever is required to fix
the thing. There's no excuse for this kind of bullsh*t .....

4-GE MPD/MPA Public Safety Mikes

Part #198801586P2 New in box. List price is $195. Here only $40 + COD shipping or MO in advance and save the COD charge.

Have 4 pcs. all in box.

With this mike you move the antenna from the radio to the top of the speaker mike. You attach the plug to the radio and you can transmit with the radio on your belt.

1-GE MPD/MPA Surveillance mike/earphone

Surveillance mike/earphone combo like the Secret Service uses. Mike and switch clip to your shirt. GE lists for $165, here $50. New.

1-GE MPD/MPA Starndard Charger

Part #19B801506P11 Standard Charger. Excellent Condition. $25 + Fedex COD shipping from Boston.

---

2 GE MPI HT UHF crystal radios
2 channel radios on different frequencies. 2 batteries, 2 antennas and one standard rate charge unit for 1 radio and one battery.

Good condition.

$60 + COD from Boston.
Thanks for reading this!!

3-Aerotron radios in VHF-Hi Range. There are 2-2 channel radios and 1-one channel radio. They all talk to each other on 154.xxx. The two freq. radios have only the one channel in them. They were working fine when taken out of service this year. They have the plugs for power and come with the microphones. $175 + COD shipping for all 3.

Kustom X band radar unit. Good condition. Does stationary and moving car detection. Has 1 large antenna/window mount for inside or outside detecting. Dash unit has one or two small cracks in the leather case and one segment of 1 eight segment speed digit does not work. However it is obvious what the speed is. Comes with tuning fork and Calibration certificate from Kustom. $200 + COd shipping.

4-motorola radios.

3-MX 360's Model #H35AAU515OAN 800mhz radios/receive frequencies of 860.88750,859.88750,858.88750FS,857.88750,856.88750. Radios are cosmetically ok but etched ID on faceplates. Condition of transmitters is unknown.

1-mx310 model #H24AAB3110A uhf 1 channel unit
with tx frequency of 465.775 and receive of 460.775. PL tone 2A. This radio is in good condition although has ID etched on front panel. Transmit and receive is fine.

5-batteries although 4 are shot and 5th isn't very good. Antennas for the UHF and 2 for the 800 mhz. 1 mx speaker mike. 3 plastic holsters. $75 for all + COD shipping.

1-Kenwood UT-50 6 meter module for Kenwood 742 radio - $275 + COD shipping

---

1-Kenwood UT-220 220mhz module for Kenwood 742 radio - $275 + COD shipping

---

1-Astron RS-20 amp. 1 year old. Used to power Kenwood 742@11 amps. VG condition - $90 + COD shipping.

I'll stay out of any debate over backwardness, but I will say that CTCSS
offers several very valuable benefits to the user. It is generally much better
than carrier squelch for tracking a user through fades. And if used on the
repeater *output*, it can be of great value by allowing the user to avoid having
to listen to pager crud and other intermod while monitoring the repeater
channel for calls. The latter use has come to be the more important one
in many cases here in the US. Once you've lived with a CTCSS system
for a while in a high RF area, you don't want to go back to anything else.

(Many of our "open" repeaters use CTCSS for these reasons, and not
just as a way to control access. Locally, most of us have agreed to use
a common 100 Hz CTCSS tone on open machines. This means that
even for those whose radios don't come equipped with CTCSS encoders
and decoders, the simplest and cheapest retrofit kits can be used.)

I've operated my machine with an OR system for a number of years.
That allows stations without CTCSS capability to still access the machine
via direct carrier access if their signals are strong enough (I set carrier
squelch very tight), or use CTCSS and operate under more marginal
conditions. CTCSS is transmitted on the repeater output at all times.
This has worked very well.

I understand that UK regulations are somewhat different from ours,
but a system which ORed tone burst and CTCSS could give you most
of the benefits we enjoy. (And most rigs have a monitor button which
lets you open squelch to listen before transmitting even if CTCSS
decode is operating, so that should satisfy your requirements too.)

I will answer your question:
The Radio Shack Power Amp requires more drive than your FM-10 can supply. Check out MYCAL's web page for a more suitable one that will boost the FM-10 to something of your liking. Try this one...
http://fov1.fov.uni-mb.si/~ufopra374a/index.html
or this one...
http://www.paranoia.com/~filipg/HTML/LINK/F_FM10.html

friend,
Lute

I think that the latest wideband rigs frenzy has pretty much sentence the
222MHz band to death. Not only the manufacturers are not making them,
even the HAM buyers are not even considering it as a factor for complete
wideband coverage anymore.

Steve,

The irony of the converter box solution is that it will just convert the
HDTV signals to a format which can be displayed on the standard 525 line
TV screen.
There are some people who think that the $300 - $700 converter box will
somehow transform their present TV into a HDTV display. Also, you
mentioned your VCR. Add to that your camcorder and any taping you have
done with that. There is no doubt that all of this conversion will cost,
and cost big. I am assuming that the public demand for this service must
be overwhelming the FCC.

In looking at the chatter on the newsgroup about this rig, I was wondering if anyone had any comments/answers on the following:

- Removeable faceplate: It looks like this is not going to be an option, but I didn't see an "official" stance.

- Dual-band receive (i.e., monitor 2m and 6m call frequencies simultaneously): Again, nothing "official" that I can find in the newsgroup.

- 222/1296 capable: Is it possible that either/both of these bands could be included in the US model as add-ons (or just plain built in)?

- Will this rig do Mode A and Mode K satellite functions (2m up/10m down or 15m up/10m down)?

- Is the FT-736 being discontinued due to this radio?

Thanks in advance!

As Bill notes, there will be *at least* a 10 year phase in of DTV broadcasting.
Originally, the FCC had set a hard and fast 10 year deadline, but that didn't
last long. The plan now is to maintain NTSC transmission until DTV receivers
reach saturation in the marketplace. (What constitutes saturation is still
somewhat obscure, numbers ranging from 80% to 90% market penetration
seem to be the target point.) My personal opinion is that it will likely take
15 to 20 years to reach that saturation level. But if DTV gains the same
sort of rapid acceptance that CDs did in music, the 10 year target could
be met.

Note well I didn't say HDTV. The industry now prefers to just call it DTV.
Several definition levels can be used ranging from NTSC equivalent to
full HDTV. This gives the market more flexibility which will be needed
until inventories of HDTV programming become sufficient to supply
demand.

The transmission standard will allow up to 4 simultaneous NTSC quality program streams. And it is likely that the broadcaster will take advantage of this in certain time periods. For example, it is very unlikely that news programming will ever be in HDTV, nor is it likely that infotainment programming or older syndicated product will ever be in HDTV. For news, the origination equipment is too expensive to procure in the quantities needed, and the higher performance is generally unwarranted. And older product was shot in low res standards so you'd have a garbage in, garbage out effect if you tried to convert it to HDTV.

HDTV will appear first in sporting event coverage and in first run prime time network programming. One network has privately committed to its affiliates that it will guarantee 5 hours of prime time HDTV a week by October 1998. That will expand as market saturation increases. But outside prime time, it is likely that the broadcasters will supply multiple program streams at lower definition for a long time to come simply because there isn't enough HDTV product to fill the hours, and won't be for many years.

The inability of NTSC viewers to access these additional program streams may serve as an incentive for them to upgrade their equipment to DTV. That would give them access to much more free programming for a one time equipment cost rather than an ongoing monthly cable fee.

And thats not the only benefit. Even at NTSC resolution, pictures will be much higher quality to the average viewer with DTV because of freedom from ghosting, noise, and interference. Most viewers will be able to discontinue cable service and still get high quality reception.

DTV will allow the free over the air broadcaster to regain some ground against cable. And local content will continue to hold ground against DSS. This will mean lower costs and more choice for the viewer.

Broadcasters are taking an enormous gamble on DTV. It will cost about $50,000,000 per station to convert to DTV. If DTV doesn't pay off in terms of increased viewership (and hence higher ad revenues), there are going to be a lot of bankruptcies in the broadcast business over the next decade.

Bill,

As I understand it, this ten year period is already in effect. Am I wrong in thinking that as of the year 2007 the present television frequency allocation will be deleated, or does this extend out to the year 2017? If the first is true, than it means that about 100,000,000 HDTV sets must be produced and purchased within the next 10 years to get to the 90% penetration area. If my math is correct, this means that there needs to be an expenditure of about 150 billion dollars by consumers in this 10 year period (average $1,500 per set). This does not include VCR and camcorder upgrades. IMHO I do not believe that the average consumer realizes the expense they are facing. Personally, I plan to get a HDTV set, but probably only one. Presently my family uses 3 televisions in the house. If converter boxes reach the sub $100 level, I may purchase them for the other TVs. The person I feel sorry for is the uninformed consumer who purchases that big 50 inch analog home theater system 4 or 5 years from now :)

Seems that to make a HF/6m/2m/70 cm rig and NOT have it do 222 is pretty
cruel, EXCEPT when you realize that 222 is apparently NOT a ham band
in Japan, or in many parts of the world for that matter.

So we ask again, who's building what for whom???

To extend the receiver and open up 800 MHz receive (cellular blocked):

-- Turn off the radio

-- Press and hold the band and squelch buttons.

-- Turn on the radio while holding these buttons,
wait for 5 seconds before you release the band
and squelch buttons.

-- Now the receiver should be opened up as far as it will go.

To enable Crossband Repeat:

-- Set the VHF and UHF frequencies you want to use.

-- "Lock" the radio by holding down the CALL/LOCK button
for two seconds.

-- Turn off the radio.

-- Hold down the SQUELCH button (above the PTT button),
the MAIN button and the BAND button.

-- Turn the radio on while holding these buttons. The "LOCK"
indicator (a key icon in the upper right side of the display)
will be flashing, and the radio will be in crossband repeat.

To disable Crossband Repeat:

-- Hold the CALL/LOCK botton down for two seconds. The "LOCK"
indicator will stop flashing, unless...

-- if the crossband repeater is in use, holding the LOCK button
won't turn it off. If you must shut it off in that condition,
press and hold the SQUELCH button, then hold the LOCK button
for two seconds, and the "LOCK" indicator will stop flashing.

From jones1@alltel.net Sun Jul 20 09:43:46 1997

The mod for out of band transmiting is as follows:

Remove the four screws on the back of the radio and the
two screws under where the battery is.

Lift off front of radio(keypad). This is the logic unit.

There is a chip diode at the back of the logic unit.
The number is D523. Remove that diode and it will allow
transmit out of band on both 2 meters and 440.

(Sorry, I can't tell you where these parts are located on the board).

>
>Barry KA1BOY

Hi, Barry

I've had a 5900 since last March. Bottom line: it's complex, but I like
it.

On the plus side:

-200 memory channels per "side," 400 total. (option)

- Excellent intermod rejection.

- Wide receive coverage - 44 MHz to over 1.2 GHz, with reasonable
sensitivity over most of that range (excellent in the ham bands and
adjacent public service bands). 220 MHz happens to be in the "poor" zone.
800 is good. Though cellular is blocked, the "image rejection" there is
actually +6 dB, so you can hear cellular just fine by tuning above 916 MHz.
I have a mod for the transmitter I copied off the internet, but never
tried.

- Very flexible programming. You can almost think of it as two radios.
The memories are completly independent on each side of the radio. You can
program 50, 144 and 440 frequencies on the left side, and 144, 440 and 800
(receive) on the right side.

- 8 "hyper memories" - basically full-radio snapshots you can load into
descrete front-panel buttons. For example, set the left side scanning
memory channels, and the right side scanning between band limits. Load
that into a hyper memory, and whenever you push that button, the radio
starts that scanning routine. Or, set it up for crossband repeat, and load
that into a hyper-memory. Push the button for instant crossband repeat.

- great heat-sinking. The whole case is the heat sink. The radio gets
quite warm in operation, but that's normal. The thermal-controlled fan
doesn't come on for a long time.

- good remote operation. The front panel snaps off and mounts remotly
easily.

On the minus side:

- complex programming and manual operation. That much flexibility requires fairly complex programming. If you're used to Icom, Kenwood or Yaesu, prepare to learn a somewhat new way of thinking. You probably don't want to be changing a PL tone while driving. Keep the operator manual close by.

Any particular questions? reply by e-mail (remove the no.spam in the return address).

73,
Gary KN4AQ

Don, Had you thought it out a little more you could have sold just the radio and kept all the knobs to sell separate with the manual. I have seen R4-B lines (complete stations) at hamfests for as little as $300.00. And they included all the manuals. Oh Well what ever the market will bear....

CQ CQ DE KC8EEY;

I have a problem with my FT901dm. It transmits Double side band. The filter is suppose to take out the unwanted side band, but it dosn't. Filter works fine in the receive mode. There are some switching diodes that switch the filter in and out, they seem to check good on board. Question (1) Has anyone had this problem and how did you fix it. Question (2) one of the switching diodes must be switched on from the tx circuit, which diode and what should I look for?

My electronic ability is limited only by experience so make your answers simple. Your help is appreciated!

Ya got that right. NTSC works just fine. I'm just a little surprised the
FCC didn't say "let the market decide" like they did with quad stereo, then
let the whole issue die a natural death. One thing is for sure, HDTV will
create a lot of jobs - offshore.

I think it's time to renew my library card.

69. Yaesu FT-50RD TV audio

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-01 00:00:00 UTC
From: abtownes@hotmail.com
Message-ID: <881001741.26659@dejanews.com>
Source record: 160481

It is not widely known, but commercial TV
channels are often assigned by the FCC on
carrier frequencies 10 KHz above or below
the nominal frequency. The audio can be heard
on the FT-50R for many TV channels in its
wide tuning range, and it is accurate enough
to show which are offset up on down the 10 KHz.
Indeed, if you want to listen to the TV audio,
you should program it with the needed offset.
TV tuners generally use AFT and do not deal
with this offset digitally.

A separate matter with the FT-50R is the Scan
Resume option. (Function-11, "RESM").
This was not what I thought. You choose between
5-seconds and something called CRrr. The 5-seconds
means it stays on one carrier for 5 seconds and then
scans to the next one, even though the first is
still on. This mode should be called Search and
Sample, and is popular on car radios, but why here?
The CRrr makes it wait until the carrier drops,
and then scans more. It actually waits 2 seconds more.
This is normal scanner action. You might think
the choice is about how long to wait for the
carrier to resume, but it is not. CRrr is the
mode you should program.

>SB220.
Dear Len,

You have two separate problems - one of which you obviously know
about, and another of which you may not know about.

The relay problem is easily satisfied by any of several circuits which
isolate the low rated circuit in a Kenwood Xcvr from the hellacious
load of the relay in many linears.

I use a small 12 v relay that is operated by my Kenwood Xcvr (TS-450)
and I use this small auxilliary relay to fire the Linear, which in my
case is an old Henry 2K with a real hunk of a T/R relay. It does the
job very well. I use 12v because I have a 12v rail in my shack from
an auto battery which floats across the Astron 12v power supply at all
times.

I designed my little relay Bud box with RCA phono connectors and
brought the control lines out of the back of the TS-450 via the
"Remote" connector per Kenwood recommendations. I also included an
On/Off switch and an LED in the relay box in order to turn it on and
off and to be able to see when it was powered. A "snubbing" diode in
the circuit (to dissipate the energy stored in the Linear's relay
coil when turning off the linear) will prolong the life of the relay
contacts.

The problem that you may not know about is the most digital Kenwood
Xcvr's require that you go into the Power On Function Selects and
program the Linear Key Relay to the "Enabled" state - otherwise, you
may find that the control line to the linear doesn't come on when you
key the Xcvr.

How many members of the public have you heard even mention HDTV or even less likely, understand its implications and have suggested that they are willing to pay for the small added clarity of picture? (beyond what is now available on DSS). In my experience--exactly none. This is another issue forced onto us just **because it is possible to do it technically**--we don't need it, we don't want it and I don't think the public will be willing to foot the bill. Few people have any idea what it is that Reed Hundt, until lately chairman of the FCC, has foisted upon us. Who convinced him-What faction was it that *sold* Hundt on the idea that this was good for America? What group of leading edge engineers convinced him that this was "Must Have" technology for all of us? More to the point, WHO NEEDS IT?

This whole HDTV scenario plays strikingly like some of the "code in ham radio" issue--Just because better technology is out there, we are led to believe that we all 'must' adopt it ASAP, since not to do so is some kind of technical sacrilege at best, and downright heresy at worst. Our wants and true needs, and certainly what we can, or are willing to pay for, are not even a consideration in the both these issues.

Message-ID: <19971201015300.UAA04908@ladder01.news.aol.com>
Source record: 160529

The December update of "The Antique Radio Collector" has been posted!

This month has many new ads for "Radios for Sale". Please don't forget to browse the "Wanted" ads if you have items for sale, as there are lots of ads from collectors needing those hard to find parts and radios.

We've cleaned off ads older than 3 months (Sept and earlier). If you want to add an ad to this months issue, we'll be glad to do so, as we intend to begin updating ads on a weekly basis, posting them each Sat. evening for viewing on Sun. (whenever possible). Ads will expire in 12 weeks - or earlier by request. You can run you ad longer if you just let us know when placing it.

As usual, we've added several new websites to the "Website Index". Seems new ones just keep on appearing almost every month!

We'll be a little late posting new "Old" radio programs for your listening pleasure in "The Listening Room". Stop back around Dec. 3 to hear the new selections.

If you've never visited our Website, stop over and browse one of the Nets best collector sites.

"The Antique Radio Collector"

The HDTV transmissions will not be at the cost of elimination
of regular TV channels. There will be a period of time (10
years) when both types of signals will be available. In that
time, it is very unlikly that most (not all, but most) people will
have migrated to HDTV by purchasing at least one HDTV set.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and

feature priority scan and a separate trimmer capacitor for
each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Source record: 160536

I have the following ICOM radios for sale:

IC-730 transceiver: $375 including UPS shipping
-- 10 - 80 meters w/WARC, 100 watts, VOX, digital readout, IF shift
-- HM-7 preamp hand mic
-- FL-54 narrow CW filter (270 Hz)
-- Power cord
-- Homemade mobile bracket
-- Original owner's manual
-- Copy of service manual
-- Case has some scratches on it from being mobile but unit is excellent
electrical condition.

IC-740 transceiver: $425 including UPS shipping
-- 10 - 160 meters w/WARC, 100 watts, VOX, digital readout, IF shift, PBT, RIT
-- HM-7 preamp hand mic
-- FL-45 narrow CW filter (500 Hz)
-- Power cord
-- Original owner's manual
-- Original factory box
-- Case is in excellent condition and rig is in excellent electrical condition.
I am second owner and both of us only used rig as back up.

The cable is the same. It is not necessary to purchase a complete new package. You can order the "software only" upgrade for a very reasonable price - $14.95 I think, from RT Systems. (800)723-6922.

Hi All,

I have gotten new ch elements for my micor uhf 100 W widespaced xcvr,
and I plug them in ,,,and no transmit.. I tried to tune...and no
good...I put the other (old) elements back in,,,no xmit! It worked
when I originally took it apart...any clues? I tried to follow the
tune up procedure from the manual as best as I could...Is there some
"quirk" with this radio...any easier way to tune up...I am pretty sure
I didn't fiddle with the offset oscillator adjustment...
any ideas would be appreciated!
thanks!

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

Colin R. Wright wrote:

In looking at the chatter on the newsgroup about
this rig, I was

wondering if anyone had any comments/answers on the following:

- Removeable faceplate: It looks like this is not going to be
an

option, but I didn't see an "official" stance.

- Dual-band receive (i.e., monitor 2m and 6m call frequencies

simultaneously): Again, nothing "official" that I can find in
the

newsgroup.

- 222/1296 capable: Is it possible that either/both of these bands

could be included in the US model as add-ons (or just plain built in)?

- Will this rig do Mode A and Mode K satellite functions (2m up/10m

down or 15m up/10m down)?

- Is the FT-736 being discontinued due to this radio?

Thanks in advance!

Colin, K4SSO

And so you're going to recommend that nothing be said about this to him,
because by doing so, it might destroy his 'spirit' to pursue pirate
radio? In other words, by your silence, you will cause others to become
victims of the legal system?

I think you're the one that should go away. Permanantly.

I have a Drake dream station for sale. TR-7 with NB,Fan,CW and SSB filters,PS-7,SP-75 speech processor,MS-7 speaker,7077 Mic,R-7 receiver that will xcv with TR-7. R-7 has NB,CW,SSB,AM filters, all cables. I also have service kit with extender boards, tuning tools, and service manuals on all. Everything is like new and works great. I really don't need all this, but hate to break up. Will sell all for $1650 plus shipping. This is a rare and complete station. Also have a MN-7 tuner to match for another $150. 505-437-8658 or email.

105. FT-50R ARS Probs Fix!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-02 00:00:00 UTC
From: Ron Castro <ronc@sonic.net>
Message-ID: <34850AF5.4352@sonic.net>
Source record: 160305
Body handling: HTML body converted to readable text

Like many who hardware-modified their Yeasu FT-50R's for MARS/CAP xmit, I noticed that my Automatic Repeater Shift (ARS) function had defaulted to the European band plan, rendering it useless for US repeater operations. I use the ADMS 1C programmer (v 1.04), but neglected to save a template of the origional USA configuration. Even if I had, I understand that making the hardware mod makes the file unusable.

Good news! Despite reports that the ARS function is "hosed" after the mod, it CAN be restored! To find out how, check out the FT-50R homepage at:
www.members.aol.com/aeimn/ft50/articles.txt
Look near the end for the Ingra-Beton article. The article shows how to use a hex-editor to change the .TPL file (although it works on .RDF files as well) to restore the functions, while retaining MARS/CAP xmit capability. I found that only ONE BYTE needed to be changed in my file to fix the problem, and although I have never edited a hex file before, it worked right away! Any hex editor can be used...I used XTREE Gold, but there are dozens of others out there, including the unfreindly DOS debug. Please read the disclaimers in the article.

One tip...read the article VERY carefully, make sure you FULLY understand it before proceeding, and if you are squemish about hex editing, talk to someone who knows about it to make sure you find the right addresses in your file the article refers to. Save a file that you know works with your radio as a back-up!

Three cheers for "Indi" for solving a problem that has stumped FT-50R users for a long time!

<kevin4321@email.msn.com> writes
>I found it myself. I opened the top of the radio and looked for Zero Ohm
>resistors or Jumpers. I Found a Zero Ohm resistor in the front left corner
>looking down on the radio. Just above it and slightly to the left is an
>empty resestor position.
>
>Removing the resistor will OPEN - TX
>Adding a jumper to the top pads will CLOSE - RX to just the ham bands.
>I could not find any way to open the cellular block

Expanded TX

To change from C2>C3 or B2>B3
Remove R3028 and reset radio

To change from C1>C2 or B1>B2
Remove r3029 & R3031 and reset radio

To reset radio hold [VFO/MR] + [REV] then turn power on

Don't know about the cellular block - I'm not interested in listening to
cellular traffic!

Mine came today! A nice radio for the price but first opinions are
have a few things I would like improved, mainly the squelch appears to be
preset, you can open it by holding in a button but from what I can figure
out it can't be changed from the preset sensitivity. Also there is no way
to use an antenna other than the one attached to it. If you look at it
from the point that this RADIO costs less than some MICROPHONES I have
purchased I think it is a great value.

If anyone out there does know of a way to change the squelch settings I'd
appreciate hearing from them. I am also looking for the CAP mod for it,
Alinco hasn't replied to my e-mail yet. For those of you that are
interested it rx only extends to 147.995 which for my uses other than
Civil Air Patrol is fine.

It's not that they don't feel it is worthwhile, it is the problem that their police force uses to 222 band for enforcement, and no one there can own one, so
they are making the units for the North American market only.

From: Meegan and Jim Wilson <wilson@afn.org>
Subject: Alodine aluminum treatment

Loek,

I dunno where to by Alodine powder, but I bought the PPG equivalent, "DX503" SOLUTION at my local industrial/automotive paint supplier. I live in Gainesville, FL, population ~ 100,000, and there were two suppliers that had it in stock here.

Alodine (alodyne?) is a Dupont trademark for a "chromate conversion coating". DX503 is the equivalent stuff which leaves a golden finish on the aluminum; there is also a "clear" version. Both are primarily used as a paint prep, but I used it for its electrical properties.

Date: Tue, 02 Dec 1997 20:03:28 -0600
From: KB4UTZ@yahoo.com
Subject: HELP!! I need some advice on my first radio (HT) purchase!

I need some help from those of you with handy-talkie (HT) experience.

I just passed my Tech Plus exam and am now in the process of choosing my first radio. I enjoy hiking, camping, and backpacking so I am currently leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I do plan on listening/using the radio during my daily commute of about 25 miles into metro Atlanta (Georgia) also though.

My specific questions are:

1. What radio would you recommend for a 2m/70cm beginner like me? Mobile or handheld? Why?

2. Depending upon the answer to #1, what radio(s) would you recommend and why?

3. As I stated before, I am leaning toward a handheld... in particular possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both have the MIL-STD 810 rating. Would either of these two radios be a good choice? Would one be preferable over the other? Why? What are the pros and cons of each radio? Or... should I forget these two radios and consider something else altogether?

4. Are there certain radio manufacturers that I should stick with (or conversely avoid) in consideration of radio quality, frequency of repairs needed, etc.?

Thank you in advance for any assistance you can provide.

Kirby Davis (KB4UTZ)
Douglasville, GA

>allocation.

I attended an HDTV seminar given by Hap Griffin, WA4UMU, at the Sumter, SC hamfest this year. Hap is a great engineer with SC ETV. The modes TV will be using VARY, at the whim of the broadcaster. HDTV, wide screen 16X9 aspect ratio will occupy the entire spectrum of a channel. However other, more profitable modes, will obviously be used. 4 "standard resolution" TV channels may be broadcast. Or, one or more of the standard resolution channels may be used for data broadcasts (internet, for instance) that could be more profitably sold to a third party. I really doubt US viewers will ever see a wide screen HDTV signal broadcast over the air that would hog the whole channel. There's just TOO much money to be made renting out the other services.

During the question period, I asked Hap who would control my television...me locally or my broadcaster. I preconceived the answer...THE BROADCASTER will control all new television sets. He may allow you to watch the infomercial channel on your serialized receiver, just like he does now with DSS. If you wish to purchase a movie from Channel 5's HBO channel, you may wish to subscribe by calling Channel 5's local order line whereby they will turn on HBO so you can watch it, as long as you pay the bill...or...you may wish to watch one of our subscription channel movies, one movie, charged to your credit card by our friendly operators. If you think TV service is going to improve with digital TV, you must have slept through this presentation. Television is going to be a BROADCAST SUBSCRIPTION service and the FCC is going to give it to them. Your converter box will, of course, be COMPLETELY CONTROLLED by the broadcast station, just like your DSS box is now. Of course, we'll need the model and serial number from your box's program card inserted in the front of it before you can subscribe to CHANNEL 5! We'll charge basic TV service to your Mastercard...Then, well advertise the hell out of you like cable channels do now. Bon Appetit!

The picture and sound at the converter's output will look exactly like DSS does now. It's the same technology. HDTV will never be transmitted because the broadcaster will be allowed to have 4 "standard mode" channels which is more profitable as they can SELL YOU SERVICE. They will be in full control of your converter box, just like DSS is....right over the UHF TV spectrum.

I haven't seen any posting about the FCC selling off 1/2 of the VHF TV spectrum after 2006. The decision has not been made which side of the FM band will be sold, but the FCC will either sell off Chs 2-6 or 7-13 (something like that) at auction to the same speculators who bought up the 220 ham band spectrum. This was also part of the ETV presentation I viewed. Selling off this spectrum will have two great benefits to ham radio, however. It will take a lot of the heat off selling the 2 meter ham band to the highest bidder. With so much other spectrum available, we may still be allowed our little 4mhz slice of heaven. It may save 440, also! It will get their greedy little lawyer minds off ham radio's bandspreads for a while, at least...if we don't die of old age clutching our morse code in the process.

Please have your Mastercard, Visa or Discover card number and expiration date handy when calling the Channel 47 Order Line. Did you want to buy The Young and The Useless today?

As the broadcaster will be in control of what you see, this HDTV
sporting event will be, as with DTV's sports channels, a PAY TV
option. Unpaying viewers will be watching other infomercials from
other broadcasters during this period. The FCC will not stop them,
either! It was part of the deal....(c; Broadcasters, I'd bet you,
will stay as much time as possible on the 4-channel NTSC
mode...letting you watch free one channel of infomercials or BUYING
the other 2 or 3 by calling the station's order line with your
mastercard in hand. WAnna bet?

There will be very little "free" commercial television. They may let
you watch old reruns of Mr Ed on the free channel. The ONLY reason
they are so positive about this new digital system is it leaves the
BROADCASTER in control of YOUR television set for PROFIT. FCC is
turning over-the-air broadcast TV into your DSS system. Non-paying
subscribers will probably get 3 or 4 free channels of old reruns and
stupidity like they do now. We'll sell the rest over the phone
downloading the turnon codes at will to your "converter box" or
digital receiver. ALL receivers will be programmed like DSS is now.
>

>Broadcasters are taking an enormous gamble on

There will be many new billionaires in the TV biz. Your perception
that they are going to give it away like they are forced to do now by
the current technology is wrong....all wrong. Business does
everything to increase profits...Digital Television is one of those.
Just watch it!

Virtually all HF rigs with CTCSS are dip switch programmable. I agree,
its a nusciance. The Mfgs. are not getting the hint.
There is a simple mod that can be done that will allow wider RX coverage
and transmit on all bands. (Works on my non-H version - should be the
same for the H) The mod is out here on the Internet and fairly easy.
I've had mine in my truck for 2 years and love it. I use it mainly on
40 M.
Good luck -

I don't want to be a wet blanket, but .... I seem to be missing
something. It doesn't look like there is anything new, revolutionary,
or even slightly evolutionary about this radio....

It is not that much better than the existing competitors radios...
What would be really exciting would be if it was easily adaptable
to digital speeds greater than 9600 baud... after all P3D, is coming.

Well, Randy, if you did learn code and did upgrade, you'd obviously fit right in with the people you're whining about. So, AMF, have a good life, and by all means do ask your physician about Prozac, it's the perfect solution for the attitude adjustment you're in dire need of.

I am seriously looking for a Drake TR4Cw (RIT model preferred but will take a standard TR4Cw). The TR4Cw was nothing more than a TR4C souped up for serious CW operation with a nice filter. At one time, Drake also sold upgrade kits to convert straight TR4C's to Cw's. I want an original TR4Cw, not an upgraded TR4C.

I would also be willing to consider mint condition TR4C's however.

From: Eric Trowbridge <jbart@bigsky.net>
Message-ID: <34842e08.0@news.bigsky.net>
Source record: 160350

I am so happy that code is a requirement for the best portions of the Amateur radio spectrum that I wish that there would be more testing that required code. GO CODE, GO CODE

Onward and most of all upward learn it or stay on the frequencies that are more appropriate for you so that you can't propagate bad and poorly referenced information about code.

Fortunately anyone that has done the code and is on the H.F. frequencies never complains about learning it, they may not use it but they don't complain.

Notice the people who complain about it have to do it on the internet because the frequencies that they use won't get the job done otherwise, as for
their belly-aching complaining mentality so what, learn code or stay off H.F. simple isn't it.
GO CODE !!! GO CODE !!!

Eric KC7YGH Code knowledge and proud of it!!!

I've only had my DX-70TH for a short time and so far have found it an
excellent rig. I have a couple of niggles however; (a) to change the
CTCSS tone frequency you have to turn it upside down and change the bank
of dip switch settings, referring to the table which is also on the
underside of the radio (it really should be in the manual as well, the
label underneath could get scratched or rubbed). This is really not
good enough on a modern sophisticated radio, CTCSS tone should be
programmable. (b) The DX-70 will not allow you to transmit outside the
amateur bands, which is annoying if you are both a ham and a CB'er.

Gary:

I am assuming that this is a worldwide standard. Therefore I can take my new TV anywhere (it is such a pain to deal in Europe). How are the other countries implementing this standard?

If this is worldwide, it will really help us. We generate most of the worlds programming. Lots of Marks, Francs, Pounds coming back here (or at least the West Coast). It will also be nice when I am in Germany, to use the same set and DSS system as I use here. Digital TV (DTV) to me is a blessing.

129. Hot Low Pass Filter

Newsgroup: rec.radio.amateur.equipment

I had a chance to try 10 meter cw during the CQWW contest and noticed something strange. While tuning up, my swr slowly crept up from 1:1 TO 2:1 -- then started coming back down. I thought it was the antenna or feedline, but saw the same thing on a dummy load. The only thing remaining in the short feedline was an Oak Bay Technologies LP-11p Low pass filter which I noticed was getting warm. The filter is rated at 1KW and I'm running about 500 watts. The filter is assembled with many rivets and not easily opened. The rig is an TS-830 /Ameritron AL80B. The filter is as cold as stone on all other bands. If any of you fellows have an idea what's going on, I'd sure like to hear from you.

That's true. 222 MHz as an amateur band is primarily a North
American abberation. Since the VHF+ amateur equipment makers
are basically all East Asians, and build for a world market, it doesn't
make economic sense to include a band most of their customers
can't use.

>Nah, the 1.25 meter band is alive and well!
>You guys must work for Bill Gates and his little leo program.
>73 Al

Gates and McCaw's Teledisc is a *big LEO* and operates at Ka band.
They have already been allocated the spectrum which they requested,
and aren't looking for any VHF spectrum for their system. The real
little LEOs got rebuffed in their quest for amateur VHF spectrum at
the recently concluded WRC, but be sure that like the Terminator,
they'll be back in 99.

I have had the V7A for about 8 months. I replaced a TM 733 that was

stolen from my car with it and all in all it is an okay radio, however the 733 in my opinion was and still is a better radio. I have been lucky enough to find a 733 on packet and will be putting it in the car and using the V7A for packet shortly. The V7A is hard to read in direct sunlight. The display also is rather bright at night unless you dim it down. The display also does not like the cold as on the first couple cold mornings I have noticed it take a minute to be readable. When using autopatch or autodial the radio will move up or down one frequency that is in memory and can be annoying. None of these quirks make it a bad radio just annoying. There are alot worse rigs out that I could be stuck with. Would I buy anotherone, yes because I personally like Kenwood and feel they make a good product, I just wish they would not screw with a good thing.

Thank you for overwhelming responses for Masa's Web Site,
RadioTelephone.Net, Amateur Radio and Scanner Division.

http://www.radiotelephone.net/amateur/

There are new things on the web site (effective today):

- World Wide Call Sign Directory (Search everything from one
page !!)

- New PDF formatted (previously .doc formatted) Study Guide
for Canadian Amateur Radio Basic License

- Cordless Phone and PCS Phone Scanning Guide (frequencies)

- What's new ? (IC Canada Update etc., link to IC Canada's
web site)

- Montreal Area Repeater Directory (including hidden illegal
repeaters.) There is also a link to a page where you see all VE2 and
VA2 (the province of Quebec) repeaters.

- Amateur Radio Basic Qualification Study Guide (online full
version)

- General Information Sheet for Amateurs and Pros

- Amateur Radio Freqs and Countries concerned

- US Amateur Radio Exam Page

- Ham frequencies and British Columbia Frequencies

- Ham calling frequencies

- Ham license structure worldwide (Canada, US, Japan,
Australia, New Zealand... and there are links that help you to
obtain the Australian and New Zealanders license while you stay there
!!)

- US Frequency Band Allocations (for each license)

- Amateur Radio Satellite Frequencies

- Space Station MIR Information Centre

- Amateur Radio Station Prefixes

- Royal Canadian Mounted POLICE 10 codes & International Q
code list

- International Morse Code

- CB Information Desk

- International Air & Marine Frequencies

- Propagation General Information Centre

- HF Propagation PREDICTION online

- RS Scanner Info

- ADI's AT-600 Dual Band Information

- Cellular Phone Listening Centre (Cordless Phone will be
added soon !!)

- Radio Modification Centre

- VE7JPN & VA2QRU Station Equipments

I am looking for the mods to get my Dentron clipperton L amp. running on 10m. I saw one mod that removed the FL1 filter board, this will not work as it causes a very high VSWR between the radio and amp.

Is there anyone out there with the original mod info from Dentron ?

Thanks in advance. Ernie KE3VC

So Yaesu is making the wacky new 847, covering 160m thru 440 MHz
but NOT including 222 MHz...

Seems to me someone in the US could fill this niche as the
Asian companies don't feel it worthwhile.

I've seen 'em priced all over the place, and have found 'em retail at $1244.95. There are too many for sale within $100 of this price, and I'd just as soon buy new and get the warranty and free remote-mount kit. If you have a used one for sale, in as-new condition, and aren't trying to get retail price, please e-mail me with price/details. Not interested in package deals with power supplies, antennas, duplexers, etc., just need the radio. Of course, internal filters would be welcome options! I'm not interested in the older non-MK II model. 73 all, -Web KR4WM in Myrtle Beach, SC

Kenwood will fix the hot mike problem for you for free. Call them and return the mike. It deactivates the hot mike. The radio is a pleasure to use once that is done.

You can control almost all the functions right from the mike. You will rarely have to reach for the radio.

Get the remote cross band instructions from the Kenwood FTP site. It explains how to control the radio remotely with a hand held. Including turning on and off cross band repeat & one way repeat. A useful function.

You're off base there, N5WRX.

Don is a fine, fair and reputable fellow, and if he says that the rig is in top shape, then it's in top shape.

I seriously doubt that you could buy a B line in *that* good a condition at a hamfest for $300. I know I've never seen one that good for that price.

I've seen some stuff advertised at absurd prices around here too, but this is not one of those times.

Dunno if this will help, but if you just want Alodine (don't
necessarily want to mix it yourself), most auto-body
supply shops will carry the stuff. PPG makes both
an Aluminum etch and Alodine that you can buy by
the gallon.

Check with your local plating shop. I got some from one several years ago - at a MUCH lower price than buying the pre-mixed stuff. I twa ssomething like $7.00 per lb.

Source record: 160372

Just wondered if someone can tell me how much power do aircrafts and ground stations transmit.

It just dawned on me when I was monitoring the airband, and I received the aircrafts much much stronger than the air-traffic control at my location. That was when the Greater Cincinnati Int'l Airport, KY, was only about 15 miles away and one of those airplane had just left the O'Hare Int'l Airport, IL.

Thank you very much for your time. Best 73!

I have a Mercury Model 1000 Mutual Conductance Tube Tester in outstanding working condition. The case has seen better days, but it is sturdy. The case is designed to have a lid that closes to make the tester easily carried about, but I do not have the lid. The size is about 14"x14"x4", not too big. I have a complete reprint of the manual. I bought this as part of a package deal, it didn't have a manual, so I bought one for it. My price, which is very reasonable, is $40.00 plus UPS shipping for about 10 lb. from Northern Virginia ZIP CODE 22701.

Virtually all HF rigs with CTCSS are dip switch programmable. I agree,
its a nusciance. The Mfgs. are not getting the hint.
There is a simple mod that can be done that will allow wider RX coverage
and transmit on all bands. (Works on my non-H version - should be the
same for the H) The mod is out here on the Internet and fairly easy.
I've had mine in my truck for 2 years and love it. I use it mainly on
40 M.
Good luck -

Loek,

I dunno where to by Alodine powder, but I bought the PPG equivalent, "DX503" SOLUTION at my local industrial/automotive paint supplier. I live in Gainesville, FL, population ~ 100,000, and there were two suppliers that had it in stock here.

Alodine (alodyne?) is a Dupont trademark for a "chromate conversion coating". DX503 is the equivalent stuff which leaves a golden finish on the aluminum; there is also a "clear" version. Both are primarily used as a paint prep, but I used it for its electrical properties.

I don't want to be a wet blanket, but .... I seem to be missing
something. It doesn't look like there is anything new, revolutionary,
or even slightly evolutionary about this radio....

It is not that much better than the existing competitors radios...
What would be really exciting would be if it was easily adaptable
to digital speeds greater than 9600 baud... after all P3D, is coming.

162. HELP!! I need some advice on my first radio (HT) purchase!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-02 00:00:00 UTC
From: KB4UTZ@yahoo.com
Message-ID: <881113670.16426@dejanews.com>
Source record: 160388

I need some help from those of you with handy-talkie (HT) experience.

I just passed my Tech Plus exam and am now in the process of choosing my first radio. I enjoy hiking, camping, and backpacking so I am currently leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I do plan on listening/using the radio during my daily commute of about 25 miles into metro Atlanta (Georgia) also though.

My specific questions are:

1. What radio would you recommend for a 2m/70cm beginner like me? Mobile or handheld? Why?

2. Depending upon the answer to #1, what radio(s) would you recommend and why?

3. As I stated before, I am leaning toward a handheld... in particular possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both have the MIL-STD 810 rating. Would either of these two radios be a good choice? Would one be preferable over the other? Why? What are the pros and cons of each radio? Or... should I forget these two radios and consider something else altogether?

4. Are there certain radio manufacturers that I should stick with (or conversely avoid) in consideration of radio quality, frequency of repairs needed, etc.?

Thank you in advance for any assistance you can provide.

Kirby Davis (KB4UTZ)
Douglasville, GA

A hard lesson was learned when the FCC let the market decide an AM stereo standard. We wound up with little AM stereo penetration, and the surviving standard was the worst one, albeit the cheapest. A single national broadcast standard is needed to achieve market penetration and commonality of interoperability in a mobile society.

Since the US was one of the earliest major national markets to embrace TV, and color TV, the US adopted one of the earliest broadcast standards. It is clearly inferior to more recent analog standards such as PAL, but once a large installed base exists there is no practical way to let the market drive a new broadcast standard which is incompatible with NTSC. Adopting DTV gives us an opportunity to leapfrog to a new level of quality of service. But it won't work if the market is allowed to fragment into several competing standards. That can't work in a broadcast mass media.

Broadcast is a chicken and egg situation. Consumers won't voluntarily buy receivers for a system which isn't being widely broadcast. And broadcasters won't voluntarily broadcast in a standard which isn't widely receivable. It is not a situation where an open competitive market can drive a switch to a new standard.

The UK conversion from 405 line B&W to PAL was long and difficult, but it serves as the most relevant model for how to address revising a national broadcast standard. It must be driven by national fiat, and there must be a definite timetable to follow, or it won't work.

Theoretically, the clock started ticking when the first station started
DTV programming. That's already happened. More practically, the
clock starts ticking in October 1998 when major market stations
are required to start DTV service. And the political reality is that
NTSC won't be abandoned until market penetration is near enough
to universal to make the political outcry bearable.

> If the first is true, than it means that about 100,000,000 HDTV sets must be

>converter boxes reach the sub $100 level, I may purchase them for the
>other TVs. The person I feel sorry for is the uninformed consumer who
>purchases that big 50 inch analog home theater system 4 or 5 years from
>now :)

The FCC proposes to address that issue. Sale of new NTSC TV receivers
will be banned one year after the start of DTV broadcasting. That will allow
existing analog sets to be replaced by attrition over the nominal 10 year
span (most TVs are replaced normally over a 10 year cycle which is why
10 years was picked as the phase in period in the first place.) The people
to pity are those who will need a new TV immediately after the ban on
sales of new NTSC receivers goes into effect. They'll have to pay the
price premium for being on the infant side of the volume/cost curve of
DTV.

(Note, political pressure may delay this ban on new NTSC set sales,
but ultimately it will happen. I suspect it will phase in, with high end
sets being impacted first and the ban trickling down to inexpensive
portables as the volume/cost curve crests and reduces the DTV
cost premium to a more nominal value.)

Yup, looks like it. Strange isn't it? People leave tyranny all
over the world, and come to Amerika, HOPEFULLY to find freedom, only to
find that in Amerika, a person can be JAILED for committing an act of
civil disobedience (read: non-violent crime). Isn't it just incredible
that WireHead and I are going to have to go to prison for committing the
vile act of EXERCISING OUR FIRST AMENDMENT RIGHTS? However, isn't it even
more incredible that _YOU_ SOMEHOW ACCEPT THIS AS BEING OKAY? :-/

Recently in the news an immigrant from Russia came here 22 years
ago and started a plastics company. A perfume company ordered viles from
him to package their product. He set to manufacturing these small viles.
Drug dealers found the viles to be excellent packaging for crack cocaine,
since the immigrant had produced a large number of them, and sold the
surplus through various outlets as surplus packaging. Thousands ended up
on the streets used to package crack. He was arrested and charged with
conspiracy to distribute crack cocaine. His production records showed the
surplus to be ABLE to package approximately 10 tons of crack, thus he was
charged with conspiracy to distribute 10 tons of crack, punishable by life
imprisonment. LIFE IMPRISONMENT FOR MANUFACTURING PLASIC VILES THAT
COULD HAVE BEEN USED TO PACKAGE CRACK COCAINE! All of his personal
assets, his family home, his factory were all seized, he was left without
money to pay for a decent lawyer to defend himself, and his court-
appointed public defender sold him down the river by convincing him to
sign a statement of guilt, which later was used against him.

A man leaves the despotic regime of the USSR and comes here in
search of freedom, only to find that his hard work to build an industry
here can be dashed to the rocks by criminal prosecution, and by civil

forfeiture, all without HIM actually committing any crime. The man's name is is Sam Zhadanov, and you can search for news articles yourselves if you believe this is so incredible that it can't be real. Or better still, write to the man yourself, he is currently service life imprisonment in a federal slave labor camp, in Pennsylvania. His address appears below...sq

SAM ZHADANOV, REG #42489-053
ALLENWOOD FEDERAL PRISON WORK CAMP
MONTGOMERY, PENNSYLVANIA 17752

Goodies for sale, Trade, Want

I have the following for sale:

Kwd TS930SAT radio EC/NMC - Aligned by International Radio
MFJ 1786 Hi Q Loop ant Mint/NC - 1 to 2 Hours of indoor use
MFJ 482B Memory keyer EC - One small scratch on top
MFJ 949C Deluxe tuner VG/EC - Two very tiny scratches on side
MFJ 931 Artificial gnd EC/Mint - Hardly used, matches the tuner
Kwd PS30 pwr supply VG/EC - Very low Hours

I have original boxes and manuals.

I need the following:

Kwd BS8 pan adapter - I'll buy or trade for my BS5 pan adapter.
Kwd YK-88SN-1 SSB filter
Heath HP-14 DC-AC mobile power supply for the HA-14 1KW amp.
Heath HW-12 manual and pwr supply
High power Dummy load
(4) matched Svetlana 811A tubes - looking for brand new ones
(2) or (4) matched Svetlana 972B tubes - looking for brand new ones

Email trade proposals or best offers to Saad.Mahaini@mci.com

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will get the job done. However... you may be required to tell the program just what COM port and IRQ the TNC is on. The same advice holds true for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've seen that was really fussy was Kantronic's Kanterm that comes packaged with their TNC's. Wants to see COM 1 or COM 2 only.

Steve,
The rightness of an act, has very little to do with the lawfullness
of an act, which is after a fashion your point Steve. Really Flaming
Ken for pointing out this fact, as well as the suggestion that the rest
of us hams, are not right in the head for KNOWING and advising someone
of what the Law is, and the consequences of breaking it. I happen to
feel that the FCC rules on the subject are way too restrictive (oh for a
spell checker under netscape) on this subject, but alas for the present
they are the rules.

As to moving, if you learn of a country not going down this path
of lawing us to death, do let us all know.

There are two active ATV reflectors that I am aware of. Check out my web page
for how to subscribe. Go to:

www.qsl.net/wb6izg

and click on ATV resources.

As far as what TV to get. That is a good question. The biggest problem most
people have is with vertical sync. Since we are amateur TV our sync
transmissions are not perfect. Some TVs do not like TV signals without perfect
sync. On these TVs many signals will tend to roll. The only way I know to try
this is to try it out.

Good Luck

STUFF DELETED
> Having read the above, you have confirmed that I am correct in regarding the UK as very backward. Your attitude is sadly typical of UK amateurs >
:-(
Oh dear Yves. Pls re read my email. If your comments above were true, then I wouldn't have been one of the 'driving force' in putting CTCSS onto our local repeater! My comments were observations of the local users. Please get YOUR comments accurate. This is how arguments start!
I do not accept your comment "Your attitude is sadly typical ..." I would accept .. your comments of the attitude found locally after fitting CTCSS are sadly typical...
Understand the difference?

> CTCSS offers a safety advantage to mobile operators who do not have to fumble for the tone burst button.

Correct, which is why I the enhancement of it on our repeater. I have an FT290R in the car. Building my own CTCSS board to fit into the rig saved the problems you have mentioned. Also, CTCSS is such a simple thing to build for a rig (with space inside) that it something Amateurs who complain that there is no need to build anything these days, could tackle and enjoy.

> In addition, under lift conditions, it helps prevent a tone bringing up more than one repeater.

Correct. However, if/when a repeater group finds local users have the ....sadly typical attitude... , where then is the incentive to add a feature giving the users a perceived no value add. Make it compulsory and THEN it will be fitted. (As on 50Mhz) All repeaters to have it by year 2000 would be a start.
> In some situations where there is interference on the repeater input (from pager tx, etc), CTCSS only access does prevent the repeater being kept open by the interference (as happens on GB3WL).

The latter use has come to be the more important one in >many cases here in the US. Once you've lived with a CTCSS >system for a while in a high RF area, you don't want to go back >to anything else.
>
> (Many of our "open" repeaters use CTCSS for these reasons, and not just as a way to control access. Locally, most of us have agreed to use a common 100 Hz CTCSS tone on open machines. This means that even for those whose radios don't come equipped with CTCSS encoders and decoders, the simplest and cheapest retrofit kits can be used.)
>
> I've operated my machine with an OR system for a number of years.
> That allows stations without CTCSS capability to still access the machine via direct carrier access if their signals are strong enough (I set carrier squelch very tight), or use CTCSS and operate under more marginal conditions. CTCSS is transmitted on the repeater output at all times.
> This has worked very well.
>
> I understand that UK regulations are somewhat different from ours, but a system which ORed tone burst and CTCSS could give you most of the benefits we enjoy. (And most rigs have a monitor button which lets you open squelch to listen before transmitting even if CTCSS decode is operating, so that should satisfy your requirements too.)
>
> Gary
> Gary Coffman KE4ZV | You make it |mail to ke4zv@bellsouth.net
> 534 Shannon Way | We break it |
> Lawrenceville, GA | Guaranteed |
>

Hi Gary,
I agree with all your comments. On our local repeater, I was one of the people who very much wanted CTCSS to be retrofitted to the unit, so became involved in making it happen.

We are required, on 2m. repeaters, by our licence to have 1750Hz access. However, we can have CTCSS also. We have OR'd the two access modes, as you have mentioned and this gives all users an opportunity to access. CTCSS is far better, as in our application, the decoder module has a much smaller

bandwidth than that required for use with 1750Hz (+/-25Hz over here for 1750) and thus an improved signal to noise ratio for detecting the access tone.
When CTCSS is detected, the squelch on the repeater is effectively off and mobile signals will 'swish' up and down rather then chop out and in with mobile flutter. The same applies in reverse on the amateurs rx.

The repeater does not generate CTCSS when giving its identification in beacon mode. Therefore with a decoder on the amateurs rx, they do not have to listen to the beacon. They only hear the repeater when someone access' it.

I appreciate that you will understand this, but these are the enhancements I was meaning in my first reply, that the average user see's as No Value Add. They need to be convinced (not me Yves). In UK terms they ARE enhancements, but until people have seen/heard the benefits of CTCSS it is very hard to get them to understand the benefits.

Hello,

I have a Butternut 2meter trombone base antenna, but I am having trouble getting the SWR down. Does anyone have the tuning information for the gamma match?

Any information would be appreciated.

Thanks!

Jack Parmentier

I am so happy that code is a requirement for the best portions of the Amateur radio spectrum that I wish that there would be more testing that required code. GO CODE, GO CODE Onward and most of all upward learn it or stay on the frequencies that are more appropriate for you so that you can't propagate bad and poorly referenced information about code. Fortunately anyone that has done the code and is on the H.F. frequencies never complains about learning it, they may not use it but they don't complain. Notice the people who complain about it have to do it on the internet because the frequencies that they use won't get the job done otherwise, as for their belly-aching and complaining mentality so what, learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Bob:
Be sure the TX input filter is aligned properly. This filter is
a 6 stage inter-digital and very sharp. Second be very sure
you have the Xtal on the proper freq. These radios are a little tricky
to tune, although the complete procedure is in the manual. The
transmitter must be in a good dummy load or the SCR will fire
in the power controller and shut off the TX.

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

Don't bet on it. Never under estimate the power of the
Maximum Service Broadcasters lobbying group. The
politicians use Broadcast TV for their re-election
commercials and are very sensitive to the media which
elects them. Don't look for any give back in mine or
your lifetime.

Well, all I see on this web site is a text reference to an FT 847. I
think I'd rather believe the printed material on the AES catalog with a clear
photograph of an FT 846 (its model is clearly visible on the radio).

From: cyberbob_27@hotmail.com
Message-ID: <881193369.4620@dejanews.com>
Source record: 160210

OK...I have asked this question before, but never got a definite answer.
What is the TRANSMIT range for alinco dj-s11t when modified??????

After the mod I get 136-174 receive...but for Transmit I only get 136-155.
Why doesn't the radio transmit all the way?
After 155Mhz, my display just blinks. Is this normal for Alincos? Any
comments on other dj-s11t transmit range would be appreciated.

73,
Cyberbob

I have owned a TS680 since 1987 or 88....on HF, the rcvr does exhibit
blocking when nearby strong signals are present.....and you have to
modify the rig for an all mode squelch (I have the mods since I was the
one who came up with it), plus you can safely increase the power on
6 from 10watts to about 25 watts with no problem (the brick amp
can handle it but dont transmit on FM, AM or CW continuous for a LONG
time to be safe).....the missing 35-45 Mhz in RX is a minor annoyance.
I live without it and have a scanner for that!

Otherwise, I have had excellent results with my TS680...on both HF and
6...when I did the allmode squelch mod, it made scanning 6& 10 SSB much
more
of a pleasure.....have used it mobile on HF and 6 ....what a blast!!!!
:)

208. Yaesu - PACTOR problem, need help asap!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-03 00:00:00 UTC
From: orville <orville@erols.com>
Message-ID: <3485F5BC.295D@erols.com>
Source record: 160212

My parents have a Yaesu FT840 w/ tuner, which they are attempting to use with a Kamtronics Kam+ TNC, and their laptop to transmit PACTOR.

When someone else initiates a link with their radio there is no problem and a stable two way communication is established.

The problem comes when they attempt to initiate a link. Their radio transmits ok and the receiver's system automatically responds, but their system does not recognize the response and link up.

Some debugging efforts they have tried already:

They have used their TNC & laptop with another boat's radio with no problems.

Replaced antenna (transmission/reception is now very good).

Replaced TNC/radio cable.

If anyone has heard of similar problems or has any suggestions please respond here or email me directly.

The tech support has Yaesu has barely heard of PACTOR, so they were obviously of very little help!

They are presently in the Carribean hoping to use their radio to transmit email (which is very popular in the cruising community these days). The only problem is that to send and receive email you must initiate the link with the BBS station.

Thanks,

Justin for KF4MEZ

This station is truly first class, it was mine, now my friend Tom has it. You must call him after 5pm central at 817 441 5767 to get it. It has main xcvr with full 150 watts output from 3 6146's, in 9+ cosmetic, and 10+ inside with the new relays installed and the unit full tweaked!! FV 102 DM VFO with memories, FC 102 tuner\antenna relay switch with outside module for one coax into house, 4 antennas out side, and the SP 102 speaker. All in great looking and operating condition. Tom wants $1095 and will not split it up! The VFO and the antenna switch-relay would bring 5-600 bux alone, that makes the radio and speaker, 0nly 500, the price of the relay update, that makes this rig so valuable and nice. AGAIN CALL TOM 817 441 5767. He wishes to either sell out right or is interested in trading into an FT 990 or FT 920 in mint condx. Thanks, this is a truly great radio station. I know!! 73 Murray

The ICOM T7A has served my kids well for their first rig. Get the higher power (i.e. bigger battery). Good range, easy to program, has encode/decode built in. Only one band at a time though.The ICOM IC32W also a good rig and can do two bands simultaneously (V+U, V+V, U+U). But as the other fellow said any of the name brands are going to do okay. Go to http://www.texastowers.com or http://www.aesham.com and browse the specs on the different rigs and compare prices. Check locally with hams too. Might be able to pick up a good used rig cheap, esp. at a hamfest.

Tom, if Don is such a fine, fair, and reputable fellow why is he selling
the manual for the radio separately. I have purchased many many radios at
hamfests and over trader nets and all of them came with the manual IF the
owner had it. And I beg to differ with you...
Perhaps in 5 land Drake B line radios cost more but every where else the B
lines go for about $300.00 ..... or they dont go at all.

As I said in my post, "which is what most microbroadcasters do", you are obviously not one of the "most". You are to be congratulated.

From: Steven Ross <stevenross@italy-c.it.earthlink.net>
Subject: FS: 3-Aerotron mobile VHF radios (same freq's) - $175

3-Aerotron radios in VHF-Hi Range. There are 2-2 channel radios
and 1-one channel radio. They all talk to each other on 154.555. The
two freq. radios have a second channel of 154.600. They were working
fine when taken out of service this year. They have the plugs for power
and come with the microphones. $175 + COD shipping for all 3.

Date: Wed, 03 Dec 1997 10:59:28 -0500
From: Steven Ross <stevenross@italy-c.it.earthlink.net>
Subject: FS: 3-Moto Expos VHF (same freq's) - $275

3-Motorola Expos. 2-channel. Channel 1 disabled by destruction of
crystal (was police repeater), Channel 2 is 155.5875. PL of 192.8. All
3 talk to each other. Radios are in excellent transmit and receive
condition. Cases are 8/10. Batteries - 2 are VG, 1 is good. 3 Rapid
chargers and 3 speaker mikes.

$275 + COD from Boston.

Thanks for reading this.

From: kc5mdm@iglobal.net
Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty)
condition. Said to be in use when the Ham became silent key 6 years ago.
Would restore to new and has spare 3-400 Z tube as well as the one in it.
$450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1
with power supply in separate case that is a bit larger. Have Dow Key
relay box for use with older rigs. I wont say it is working now, but its
obvious that it has and nothing is burned or looks bad. Would consider
trades for newer amps or HF gear, Im just not a collector and already
have an Alpha. Thanks, feel free to inquire about possible trades.

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting
or anything else very serious. It was a nice upgrade for me from a TS-450.
For what I want to do, it is a very nice rig at the right price. I am able
to hear and work a lot more dx with the 920, and 6M is a lot of fun when the
band is open.

From: k1bqt@aol.com (K1BQT)
Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt
transceivers that put out signals in the 10 watt range. Commercial class
aircraft use more expensive radios that run on higher electrical system
voltages and put out considerably more power. Control towers generally run
low
power because the stations they are talking to are all in the local area and a
thousand feet or more up in the air. If you want to hear distant towers
clearly, you may need to install a directional antenna with a mast-mount
preamp.

Hope that helps.

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I

don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When that giant rolls over, all the lesser players have to pay attention. Of particular interest to amateurs, the final bandplan releases the spectrum currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed spectrum may be able to relax some of the pressures placed on amateur VHF/UHF allocations by the little LEOs, and others, desiring new spectrum below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable implications with regard to TVI susceptability. That also is of interest to amateurs. And it isn't all good news because broadcasters will be sharply reducing power, so over the air TV will become more of a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation and coding. But DTV will *not* use the sort of robust FEC which would make it immune to all types of interference (that would require more bandwidth for the coding overhead than is available in a 6 MHz channel). And the 8VSB modulation chosen is also not an ideal choice for operation in the face of certain types of interference. If DTV is successful in luring many viewers away from cable, amateurs are bound to face new TVI challenges.

We may also see the reverse situation, IE DTVs interfering with amateur equipment. A DTV receiver will be more computer than TV, and we already know the RFI computers can generate. The sweep rates (and magnitude of sweep currents) for the large 16:9 HDTV displays will also produce a new level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be aware of how we are likely to be affected by these sweeping changes

in the TV broadcast market. And we also have to be aware of who our
new neighbors will be in the newly vacated TV spectrum. There may
be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will
have implications with regard to what will be cost effective for amateurs
to adopt and adapt from it for our own uses. High speed RF modem
technology will be sharply impacted by the mass market DTV receiver.
A new generation of fast and cheap RF modems based on DTV
technology could have a major impact on the sorts of operations
amateurs may pursue at VHF/UHF.

>Just watch it!

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.

It is likely that the rest of the world will adopt one of these three standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a different thing from the transmisson standard in the digital era. So worldwide program distribution will be much easier than in the past. And as you surmise, this will largely be to the benefit of the current large program production companies. (Though it does open a niche for the small producer because he won't be burdened with distributing different versions of the same programming. Only the major companies can afford to do that now.)

But you won't be able to take your US transmission standard TV to Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the European choice has a number of significant advantages over the US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are the same, so you *may* see more multi-standard sets produced which will decode the different transmission standards back to a common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way. I know that it can be done if one "activates" a jumper. But, there are two questions: 1 - Where is the jumper? 2 - What are the programming steps? (I believe that it is similar to programming a scanner, but I have no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE reply via e-mail (at least cc me via e-mail) as I do not have access to a news server that carries this group.

Thanks,
Richard

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

Tel 65-536-3559

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen
that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL
REPORT : INTRODUCTION TO THE FINANCIAL MARKETS & TRADING OPPORTUNITIES IN COMMODITY, CURRENCY & FINANCIAL FUTURES. (Available on request)

Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage
HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S
which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who
has any experience with this rig to give me some additional feedback on
it's performance and user satisfaction. Thanks in advance.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

Subject: FS: L-New Glen Martin Roof Tower+More

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Subject: FS: Ussed Crossed X-Yagis vhf/uhf

Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio
to be available in the USA in Mid February 1998. I don't think it has
aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next
to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ
IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same
IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP
Tuning " in the ausio section.

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this
scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP

Tuning " in the ausio section.

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4
hours of battery life between recharges and be on a hike and run out
of juice. This again narrows the choices.. Plan on getting an
optional antenna cause the rubber duck antenna will work fine in
cities but the further away you get, the worse the performance till
nothing.. Do you have adequate 70cm repeaters in your area to
warrent the dual bander? If not, you can save a bundle of money that
could go toward the mobile, by buying a single band radio.. Buy a
single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all
beginners at one time. I would suggest joining a Ham club in your
area and asking the members for their opinion and experiences and they
would be glad to show you their radios up close and in person and tell
you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and
mobiles... Hummmm, not much help am I?? I have a mixture of all four
brands if that tells you anything, and each one does something a
little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things
about both... Like I mentioned above, if you are hiking far away from
repeaters, I would want a radio that puts out 5+ watts and have a
relatively large battery capacity, with a telescoping antenna... Do
these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

>Kirby Davis (KB4UTZ)

Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

I also heard that Yaesu made the 8100 harder to modify. Not sure
about this though. I have an 8100 and there don't seem to be any mods
other than the MARS/CAP available.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've

seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

Actually, if you study history, most of the colonists in early
America were loyalists to the crown. It was something like 3% of the
population that wanted independence and freedom, all others liked being
surfs and serving a king, paying heavy taxes to the crown.....sq

(the minority won, mostly because they fought for freedom while the
hessian and british soldiers fought for money. Fighting for an ideal
makes you want to fight harder, suffer more, and give a damn. The Hessian
mercenaries and british soldiers fighting here were only interested in
getting paid for their service, they didn't care if they won or lost. The
Americans however, were willing to die for what they believed in, while
the hessian mercinaries and british soldiers wanted to live at all cost.)

>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4
hours of battery life between recharges and be on a hike and run out
of juice. This again narrows the choices.. Plan on getting an
optional antenna cause the rubber duck antenna will work fine in
cities but the further away you get, the worse the performance till
nothing.. Do you have adequate 70cm repeaters in your area to
warrent the dual bander? If not, you can save a bundle of money that
could go toward the mobile, by buying a single band radio.. Buy a
single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all
beginners at one time. I would suggest joining a Ham club in your
area and asking the members for their opinion and experiences and they
would be glad to show you their radios up close and in person and tell
you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and
mobiles... Hummmm, not much help am I?? I have a mixture of all four
brands if that tells you anything, and each one does something a
little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things
about both... Like I mentioned above, if you are hiking far away from
repeaters, I would want a radio that puts out 5+ watts and have a
relatively large battery capacity, with a telescoping antenna... Do
these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

Source record: 160254

Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

243. Re: FT-847 (again!)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-03 00:00:00 UTC
From: Felix <hershman@ix.netcom.com>
Message-ID: <34855581.9F6D9A76@ix.netcom.com>
Source record: 160255
Body handling: HTML body converted to readable text

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect the radio
to be available in the USA in Mid February 1998. I don't think it has aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380 for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe that the FT-736
Satallite radio will be discontinued as soon as this radio hits the store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP
Tuning " in the ausio section.

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this
scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP

Tuning " in the ausio section.

Colin R. Wright wrote:

In looking at the chatter on the newsgroup about
this rig, I was

wondering if anyone had any comments/answers on the following:

- Removeable faceplate: It looks like this is not going to be
an

option, but I didn't see an "official" stance.

- Dual-band receive (i.e., monitor 2m and 6m call frequencies

simultaneously): Again, nothing "official" that I can find in
the

newsgroup.

- 222/1296 capable: Is it possible that either/both of these bands

could be included in the US model as add-ons (or just plain built in)?

- Will this rig do Mode A and Mode K satellite functions (2m up/10m

down or 15m up/10m down)?

- Is the FT-736 being discontinued due to this radio?

Thanks in advance!

Ken, (and I think I speak for many) I pity you.

People like you permitted McCarthy to have his way.
People like you blame the victim of injustice.
People like you just sit around and smugly proclaim "That's the way it is!"
and can't be bothered to stand up to make it any better.
People like you sat around and said, "But England protects us...why do we
want freedom. We don't like it either but that's the way it is."

You're wrong and you have no courage. I just want you to know that.

Oh, and by the way, don't call us kids. While you PLAY with your overgrown
walkie talkies with your friends, we're out here genuinely suffering trying
to make America more free, which will benefit you in the end.

Source record: 160259

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt transceivers that put out signals in the 10 watt range. Commercial class aircraft use more expensive radios that run on higher electrical system voltages and put out considerably more power. Control towers generally run low power because the stations they are talking to are all in the local area and a thousand feet or more up in the air. If you want to hear distant towers clearly, you may need to install a directional antenna with a mast-mount preamp.

Hope that helps.

Source record: 160260

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way. I know that it can be done if one "activates" a jumper. But, there are two questions: 1 - Where is the jumper? 2 - What are the programming steps? (I believe that it is similar to programming a scanner, but I have no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE reply via e-mail (at least cc me via e-mail) as I do not have access to a news server that carries this group.

Thanks,
Richard

I would recommend that you stop underestimating his intelligence.

> I think you're the one that should go away. Permanantly.

I know you do. That would be easier. If everyone we didn't like would just
go away. Wouldn't it be dreamy???? That's the way people like you think...
whatever frightens you or is unpleasant, just make it go away. I believe the
Nazis made a few million Jews and others go away. I believe we, as Americans,
made a few million Native Americans go away.

I instructed you to leave people alone, implying that if that meant you left
this thread well so be it. You respond by suggesting I should be imprisoned
forever (IE the Permanently remark). Does the thought of fellow Americans
being imprisoned forever for violating an Unconstitutional Federal Regulation

make you feel all warm and fuzzy inside? What kind of sicko does that make YOU?

In either case, you're not trying to protect him; you're trying to protect the government and corporate America. Why? What is your vested interest?

This amp has been stored for a while but is in real nice (dusty)
condition. Said to be in use when the Ham became silent key 6 years ago.
Would restore to new and has spare 3-400 Z tube as well as the one in it.
$450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1
with power supply in separate case that is a bit larger. Have Dow Key
relay box for use with older rigs. I wont say it is working now, but its
obvious that it has and nothing is burned or looks bad. Would consider
trades for newer amps or HF gear, Im just not a collector and already
have an Alpha. Thanks, feel free to inquire about possible trades.

I bought the FT-920 and really like it. Of course I don't do any contesting or anything else very serious. It was a nice upgrade for me from a TS-450. For what I want to do, it is a very nice rig at the right price. I am able to hear and work a lot more dx with the 920, and 6M is a lot of fun when the band is open.

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

3-Aerotron radios in VHF-Hi Range. There are 2-2 channel radios
and 1-one channel radio. They all talk to each other on 154.555. The
two freq. radios have a second channel of 154.600. They were working
fine when taken out of service this year. They have the plugs for power
and come with the microphones. $175 + COD shipping for all 3.

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained.
Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When
that giant rolls over, all the lesser players have to pay attention. Of
particular interest to amateurs, the final bandplan releases the spectrum
currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed
spectrum may be able to relax some of the pressures placed on amateur
VHF/UHF allocations by the little LEOs, and others, desiring new spectrum
below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable
implications with regard to TVI susceptability. That also is of interest
to amateurs. And it isn't all good news because broadcasters will
be sharply reducing power, so over the air TV will become more of
a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation
and coding. But DTV will *not* use the sort of robust FEC which would
make it immune to all types of interference (that would require more
bandwidth for the coding overhead than is available in a 6 MHz channel).
And the 8VSB modulation chosen is also not an ideal choice for operation
in the face of certain types of interference. If DTV is successful in luring
many viewers away from cable, amateurs are bound to face new TVI
challenges.

We may also see the reverse situation, IE DTVs interfering with amateur
equipment. A DTV receiver will be more computer than TV, and we already
know the RFI computers can generate. The sweep rates (and magnitude of
sweep currents) for the large 16:9 HDTV displays will also produce a new
level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be
aware of how we are likely to be affected by these sweeping changes
in the TV broadcast market. And we also have to be aware of who our
new neighbors will be in the newly vacated TV spectrum. There may
be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will
have implications with regard to what will be cost effective for amateurs
to adopt and adapt from it for our own uses. High speed RF modem
technology will be sharply impacted by the mass market DTV receiver.
A new generation of fast and cheap RF modems based on DTV

technology could have a major impact on the sorts of operations amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current
large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

WRONG. I never told you to go away. I told you to leave people alone.
Telling you to go worship Hitler or Stalin does not imply that you are not
welcome to return at any time after you've prayed to them for whatever
evil regime it is you desire.

You told ME to go away PERMANENTLY. Quite different.

BUZZ You lose.

Guess what. I'm going to take pity on you and GIVE you the last word.
That's the only reason you're involved in this thread anyway. To win.

I'm involved because I wanted people to know that your point of view is skewed
and biased by the fact that you are protected and privileged by an organization
that keeps everyone (including you but you don't realize it) from expressing
yourself to the masses with the same effectiveness as a giant wealthy corporation
for no more reason than that that giant wealthy corporation has given them blood
money.

Enjoy your repeaters and all your special frequency allocations but, in a few years, when micropower broadcasters fill the airwaves with relevant, timely information that serves the communities they broadcast in...and those same giant corporations have convinced the FCC to take away your allocations one by one and turn them over to commercial services, well don't come crying about it here. I don't think you'll get alot of sympathy. Maybe, then, you'll have to be the pirates.

At any rate, you win we're all going to jail, we're completely wrong and our victories are meaningless. You can go back to your safe little hamshack now and tell your buddies on 2 meters that you've saved the world from freedom for one more day.

Wirehead Prime

Um, NT offers real multitasking but I hate to tell you that Win95 does not.
It does not have full multitasking capabilities like NT or OS/2 have. Also,
Win95 is not a 100% 32 bit OS. It may supprise you (and most people) to
learn that the majority of Win95 and the accessories that are bundled with
it is 16 bit stuff. So if you really need a 32 bit multitasking OS then NT
or OS/2 are necessary (I'm not sure about LINUX).

I've noticed that most people feel the way you do about Win95 and its GUI. The sad thing is that the NT GUI is now identical. I would recommend OS/2 Warp 4. Warp will run all your DOS aps for you and it doesn't hide anything......everything is available to you (sometimes a little too much is available, but at least they aren't hiding anything)

The funny thing about Win95 is that the company I work for decided to "upgrade" to it and it cost them several million dollars to upgrade hardware and software so that they could run Win95. The good thing about it was that I was able to inherit several "obsolete" machines (like 386DX-40's with 16 MB and 486 DX-66's with 32 MB) and I run OS/2 with Win 3.1 on them. My computers do everything their new ones do, they run my Motorola radio software (Win95 doesn't like it), and I have true multitasking......and my department didn't spend a dime!!!! And now I hear that because of problems with Win95 (and Micro$oft pusing everyone to go NT) the company will be "upgrading" to NT in 1998. Lucky for me, I have special requirement and can continue to run Warp on my Intel machines and UNIX on my Sun's.

276. Seeking: 2-Meter and 440Mhz HT

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-03 00:00:00 UTC
From: David Rogers <drogers0@mailexcite.com>

If any one can offer me a Handheld Ham Radio that works at 2-Meters or 440-Mhz, I prefer a Radio Shack but all solid equipment is good.
I'm also looking for a set of Ham Radios that work at 1300-Mhz, for Data Packet.

Thanks, E-Mail me if you have any information or suggestions.

I'm considering purchase of a Kenwood TS-680S. This is a general coverage HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who has any experience with this rig to give me some additional feedback on it's performance and user satisfaction. Thanks in advance.

Hi there, Yes the FT-50 IS a GREAT radio but, in the big city or near a commercial site it has intermod. It helps greatly if you use the tone squelch. Nothing should get through other than a signal transmitting PL. When using the radio and transmitting PL with the "T" on the display (to access most repeaters) just hit the TN/TS button one again to activate the "tone squelch function.

I've been very happy with mine. The dsp on the 570d definitely allows me to hear weak signals I otherwise wouldn't. I do wish it had a seting for a 2.5kc step. 1kc is too slow and 5kc skips over signals. Also, the ground screw should have been a wing nut.

I have to nit pic to find anything negative about this rig.

>allocation.

I attended an HDTV seminar given by Hap Griffin, WA4UMU, at the
Sumter, SC hamfest this year. Hap is a great engineer with SC ETV.
The modes TV will be using VARY, at the whim of the broadcaster.
HDTV, wide screen 16X9 aspect ratio will occupy the entire spectrum of
a channel. However other, more profitable modes, will obviously be
used. 4 "standard resolution" TV channels may be broadcast. Or, one
or more of the standard resolution channels may be used for data
broadcasts (internet, for instance) that could be more profitably sold
to a third party. I really doubt US viewers will ever see a wide
screen HDTV signal broadcast over the air that would hog the whole
channel. There's just TOO much money to be made renting out the other
services.

During the question period, I asked Hap who would control my
television...me locally or my broadcaster. I preconceived the
answer...THE BROADCASTER will control all new television sets. He may
allow you to watch the infomercial channel on your serialized
receiver, just like he does now with DSS. If you wish to purchase a
movie from Channel 5's HBO channel, you may wish to subscribe by
calling Channel 5's local order line whereby they will turn on HBO so
you can watch it, as long as you pay the bill...or...you may wish to
watch one of our subscription channel movies, one movie, charged to
your credit card by our friendly operators. If you think TV service
is going to improve with digital TV, you must have slept through this
presentation. Television is going to be a BROADCAST SUBSCRIPTION
service and the FCC is going to give it to them. Your converter box
will, of course, be COMPLETELY CONTROLLED by the broadcast station,
just like your DSS box is now. Of course, we'll need the model and
serial number from your box's program card inserted in the front of it
before you can subscribe to CHANNEL 5! We'll charge basic TV service
to your Mastercard...Then, well advertise the hell out of you like

cable channels do now. Bon Appetit!

>
>Dick W0EX

The picture and sound at the converter's output will look exactly like
DSS does now. It's the same technology. HDTV will never be
transmitted because the broadcaster will be allowed to have 4
"standard mode" channels which is more profitable as they can SELL YOU
SERVICE. They will be in full control of your converter box, just
like DSS is....right over the UHF TV spectrum.

I haven't seen any posting about the FCC selling off 1/2 of the VHF TV
spectrum after 2006. The decision has not been made which side of the
FM band will be sold, but the FCC will either sell off Chs 2-6 or 7-13
(something like that) at auction to the same speculators who bought up
the 220 ham band spectrum. This was also part of the ETV presentation
I viewed. Selling off this spectrum will have two great benefits to
ham radio, however. It will take a lot of the heat off selling the 2
meter ham band to the highest bidder. With so much other spectrum
available, we may still be allowed our little 4mhz slice of heaven.
It may save 440, also! It will get their greedy little lawyer minds
off ham radio's bandspreads for a while, at least...if we don't die of

old age clutching our morse code in the process.

Please have your Mastercard, Visa or Discover card number and expiration date handy when calling the Channel 47 Order Line. Did you want to buy The Young and The Useless today?

As the broadcaster will be in control of what you see, this HDTV
sporting event will be, as with DTV's sports channels, a PAY TV
option. Unpaying viewers will be watching other infomercials from
other broadcasters during this period. The FCC will not stop them,
either! It was part of the deal....(c; Broadcasters, I'd bet you,
will stay as much time as possible on the 4-channel NTSC
mode...letting you watch free one channel of infomercials or BUYING
the other 2 or 3 by calling the station's order line with your
mastercard in hand. WAnna bet?

There will be very little "free" commercial television. They may let
you watch old reruns of Mr Ed on the free channel. The ONLY reason

they are so positive about this new digital system is it leaves the BROADCASTER in control of YOUR television set for PROFIT. FCC is turning over-the-air broadcast TV into your DSS system. Non-paying subscribers will probably get 3 or 4 free channels of old reruns and stupidity like they do now. We'll sell the rest over the phone downloading the turnon codes at will to your "converter box" or digital receiver. ALL receivers will be programmed like DSS is now.
>
>Broadcasters are taking an enormous gamble on

There will be many new billionaires in the TV biz. Your perception that they are going to give it away like they are forced to do now by the current technology is wrong....all wrong. Business does everything to increase profits...Digital Television is one of those. Just watch it!

I keep seeing reference to Yaesu's new FT 847. It is an FT 846. Its currently being advertised by the US's biggest amateur radio dealer, Amateur Electronic supply in their winter 97/98 catalog, page 88.

301. 17.9 MHz IF?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-03 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <662o4b$9r6@news.Hawaii.Edu>
Source record: 160337

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

This is really kind of funny. I performed a search of all the archived news postings from this group on the Kachina 505, and of the 30 or so postings, 90% of them where from folks begging for a review. I saw guys claim to have purchased 505's, offer side by side comparisons between the 505 and a FT1000MP for instance, but they never produce crap. What gives? Is this rig such a piece of crap that no one want to discuss it, or better yet, compare it to anything? I've never seen a subject so avoided in my life. What gives Kachina owners? Don't want to discuss it? Waste of money? Greatest rig ever made? Quiet, noisy, hard to use, easy to use, IF DSP suck, kicks butt, what? Blows the 1000MP away, can't touch the 870, makes the 756 look like a toy, can't even touch the audio dsp of the 920, what???????? Sorry to rant and rave, but I have 2k burning a hole in my back pocket, want to buy a new HF rig, but just can't decide, and certianly don't want to rule out a potential killer rig like the Kachina 505DSP! Thanks for listening, 73, Mike... WQ0N

> Give me a break!!!!

Now really, I'm anything but a "little boy", I just like playing the Blues, the local station (1 only w/i 25 miles) plays regular ol' crap and I hate it. I asked around at the local beer pub re:what they'd like in a radio station..."the blues and nothin' but" was thier answer. I gave 'em what they want, it's clean, professionally operated w/ free ads for all comers. But I'm hardly a "little boy".

> you act.

Every day is a victory. I've been 24/7 now for almost two years. They love it, I love doin' it. No screamin', no cussin', just the blues, a few free ads and that's it. A little local news once a day to keep everyone appraised. It's fun and I'm hardly harming anyone with my lil' 20 Watts of clean RF.

I have a Alinco Dr-150T 2 meter rig for sale. The rig is in mint condx. The only wear is on the bottom three buttons located on the mike. The lettering has rubbed off a little bit, from my hand rubbing across them, when keying the mike. Includes Original box, manual etc. Asking $225 plus shipping

Timewave DSP 59 not the 59+ model in mint condx. with original box, and manual. This model came out before the 59+, but is very similar. Asking $100 plus shipping

MFJ 1270B Packet TNC, good condx. With manual, mfj software, and I will even throw in a Radio Shack 1.5 amp Power Supply. Asking $65 plus shipping.

If interested please, email me at
KC5QDZ@IAMERICA.NET

Thanks
Landen

QST usually reviews a radio after it is in the market for 4-6 months. I think the reason is to give the manufacturer a chance to correct mistakes. MFj complained that the TNC 1278 go a bad review since it was the first batch off the assembly line(trust me it wouldn't have made a difference if it was 6 months later. Hee hee). If Both the Icom IC-746 and
Yaesu FT-847 come out in February/March 1998 I would expect both to be reviewed
by the Fall of 1998.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:

- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
---
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
---
^ Band-Set_Byte (Address 0CE7)

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470

C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database?
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any
specific country. That is why the ARS does not work any more, and not?
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

Subject: FS Drake

I have a Drake dream station for sale. TR-7 with NB,Fan,CW and SSB filters,PS-7,SP-75 speech processor,MS-7 speaker,7077 Mic,R-7 receiver that will xcv with TR-7. R-7 has NB,CW,SSB,AM filters, all cables. I also have service kit with extender boards, tuning tools, and service manuals on all. Everything is like new and works great. I really don't need all this, but hate to break up. Will sell all for $1650 plus shipping. This is a rare and complete station. Also have a MN-7 tuner to match for another $150. 505-437-8658 or email.

Date: Tue, 02 Dec 1997 23:32:05 -0800
From: Ron Castro
Subject: FT-50R ARS Probs Fix!

Like many who hardware-modified their Yeasu FT-50R's for MARS/CAP xmit, I noticed that my Automatic Repeater Shift (ARS) function had defaulted to the European band plan, rendering it useless for US repeater operations. I use the ADMS 1C programmer (v 1.04), but neglected to save a template of the origional USA configuration. Even if I had, I understand that making the hardware mod makes the file unusable.

Good news! Despite reports that the ARS function is "hosed" after the mod, it CAN be restored! To find out how, check out the FT-50R homepage at:
www.members.aol.com/aeimn/ft50/articles.txt
Look near the end for the Ingra-Beton article. The article shows how to use a hex-editor to change the .TPL file (although it works on .RDF files as well) to restore the functions, while retaining MARS/CAP xmit capability. I found that only ONE BYTE needed to be changed in my file to fix the problem, and although I have never edited a hex file before, it worked right away! Any hex editor can be used...I used XTREE Gold, but there are dozens of others out there, including the unfreindly DOS debug. Please read the disclaimers in the article.

One tip...read the article VERY carefully, make sure you FULLY understand it before proceeding, and if you are squemish about hex editing, talk to someone who knows about it to make sure you find the right addresses in your file the article refers to. Save a file that you know works with your radio as a back-up!

Three cheers for "Indi" for solving a problem that has stumped FT-50R users for a long time!

Date: Tue, 2 Dec 1997 10:19:28 +0000
From: Yves Remedios
Subject: FT-8100 mod - RTM10B has it, why not share it???

In article , Kevin Swanson
writes
>I found it myself. I opened the top of the radio and looked for Zero Ohm
>resistors or Jumpers. I Found a Zero Ohm resistor in the front left corner
>looking down on the radio. Just above it and slightly to the left is an

>empty resestor position.
>
>Removing the resistor will OPEN - TX
>Adding a jumper to the top pads will CLOSE - RX to just the ham bands.
>I could not find any way to open the cellular block

Expanded TX

To change from C2>C3 or B2>B3
Remove R3028 and reset radio

To change from C1>C2 or B1>B2
Remove r3029 & R3031 and reset radio

To reset radio hold [VFO/MR] + [REV] then turn power on

Don't know about the cellular block - I'm not interested in listening to
cellular traffic!

And if used on the repeater *output*, it can be of >great value by allowing the user to avoid having to listen to pager >crud and other intermod while monitoring the repeater channel >for calls. The latter use has come to be the more important one in >many cases here in the US. Once you've lived with a CTCSS >system for a while in a high RF area, you don't want to go back >to anything else.
>
> (Many of our "open" repeaters use CTCSS for these reasons, and not just as a way to control access. Locally, most of us have agreed to use a common 100 Hz CTCSS tone on open machines. This means that even for those whose radios don't come equipped with CTCSS encoders and decoders, the simplest and cheapest retrofit kits can be used.)
>
> I've operated my machine with an OR system for a number of years.
> That allows stations without CTCSS capability to still access the machine via direct carrier access if their signals are strong enough (I set carrier squelch very tight), or use CTCSS and operate under more marginal conditions. CTCSS is transmitted on the repeater output at all times.
> This has worked very well.
>
> I understand that UK regulations are somewhat different from ours, but a system which ORed tone burst and CTCSS could give you most of the benefits we enjoy. (And most rigs have a monitor button which lets you open squelch to listen before transmitting even if CTCSS decode is operating, so that should satisfy your requirements too.)
>
> Gary
> Gary Coffman KE4ZV | You make it |mail to ke4zv@bellsouth.net
> 534 Shannon Way | We break it |
> Lawrenceville, GA | Guaranteed |
>

Hi Gary,
I agree with all your comments. On our local repeater, I was one of the people who very much wanted CTCSS to be retrofitted to the unit, so became involved in making it happen.

We are required, on 2m. repeaters, by our licence to have 1750Hz access. However, we can have CTCSS also. We have OR'd the two access modes, as you have mentioned and this gives all users an opportunity to access. CTCSS is far better, as in our application, the decoder module has a much smaller bandwidth than that required for use with 1750Hz (+/-25Hz over here for 1750) and thus an improved signal to noise ratio for detecting the access tone.
When CTCSS is detected, the squelch on the repeater is effectively off and mobile signals will 'swish' up and down rather then chop out and in with mobile flutter. The same applies in reverse on the amateurs rx.

The repeater does not generate CTCSS when giving its identification in beacon mode. Therefore with a decoder on the amateurs rx, they do not have to listen to the beacon. They only hear the repeater when someone access' it.

I appreciate that you will understand this, but these are the enhancements I was meaning in my first reply, that the average user see's as No Value Add. They need to be convinced (not me Yves). In UK terms they ARE enhancements, but until people have seen/heard the benefits of CTCSS it is very hard to get them to understand the benefits.

Subject: What is the deal - Kachina 505DSP? Junk or what???

This is really kind of funny. I performed a search of all the archived news postings from this group on the Kachina 505, and of the 30 or so postings, 90%

of them where from folks begging for a review. I saw guys claim to have purchased 505's, offer side by side comparisons between the 505 and a FT1000MP

for instance, but they never produce crap. What gives? Is this rig such a piece of crap that no one want to discuss it, or better yet, compare it to anything? I've never seen a subject so avoided in my life. What gives Kachina owners? Don't want to discuss it? Waste of money? Greatest rig ever

made? Quiet, noisy, hard to use, easy to use, IF DSP suck, kicks butt, what? Blows the 1000MP away, can't touch the 870, makes the 756 look like a toy, can't even touch the audio dsp of the 920, what???????? Sorry to rant and rave, but I have 2k burning a hole in my back pocket, want to buy a new HF rig, but just can't decide, and certianly don't want to rule out a potential killer rig like the Kachina 505DSP! Thanks for listening, 73, Mike... WQ0N

From: pwserctr@aol.com (PWSerCtr)
Subject: FS: Director II pagers

Now in stock over 1,000 used voice pagers. Minitor II, Director II, and
Keynote. All pagers are completely checked out, the housings are cleaned, and
come with a 90 day warranty. Most bands are available VHF, UHF, and 900 MHz.
The pagers can be crystallized to your RF freq and set up on your paging
tones.

Also available - boards, parts, housings, chargers and new batteries

Check out the new LOWER PRICES available on selected models.

The price varies depending on the pager and options requested. Please go to
our
web site, it lists all the prices and options.

We also take trade in pagers working or not: Minitor II, Director II, and
Keynote

Message-ID: <EKnD1y.CtG@freenet.buffalo.edu>
Source record: 160143

I sure hope you guys can help me. I have a Kenwood TH-21AT 2 meter transceiver. Inside the unit, the two power cables that go from the circuit board to the battery contacts have been pulled off from the board. Could someone tell me where the red and black wires connect to the circuit board on this particular radio? I can't figure out where they've pulled from and I don't want to scrap the radio -- it still works great.

Thanks,

I have the following ICOM radios for sale:

IC-730 transceiver: $375 including UPS shipping
-- 10 - 80 meters w/WARC, 100 watts, VOX, digital readout, IF shift
-- HM-7 preamp hand mic
-- FL-54 narrow CW filter (270 Hz)
-- Power cord
-- Homemade mobile bracket
-- Original owner's manual
-- Copy of service manual
-- Case has some scratches on sides from being mobile but front panel is in excellent condition. Unit is excellent electrical condition.

IC-740 transceiver: $425 including UPS shipping
-- 10 - 160 meters w/WARC, 100 watts, VOX, digital readout, IF shift, PBT, RIT
-- HM-7 preamp hand mic
-- FL-45 narrow CW filter (500 Hz)
-- EX-242 FM unit
-- Power cord
-- Original owner's manual
-- Original factory box
-- Case is in excellent condition and rig is in excellent electrical condition.
I am second owner and both of us only used rig as back up.

Yeah, on 10m, you're getting close to the highest frequency that the
filter will pass, so the parts are heating up. Then the high temp must
be affecting one or more componants that affect the SWR.

From: al7dl@aol.com
Message-ID: <19971204135701.IAA19189@ladder01.news.aol.com>
Source record: 160150

One thing I did not mention. On the downside, if the clock is turned off, it is totally turned off. It won't work with the HT on. Also, if you turn the clock back on, don't forget to reset it.

Bryce, K1GAX (ex AL7DL)

341. Yeasu FT50RD vs Icom W32A

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-04 00:00:00 UTC
From: KB4UTZ@yahoo.com
Message-ID: <881237231.11500@dejanews.com>
Source record: 160151

Several days ago I posted a message asking for some advice from Elmers about which handheld dual-band they would recommend. At that time I had narrowed my choice pretty much to the Yaesu FT-50RD and the Kenwood TH-G71A.

Well... after reading many posts, I'm somewhat cautious about purchasing Kenwood's TH-G71A since it is a brand new radio that hams have yet to "test out" and compare to others. In addition, it sounds like many have had some problems with Kenwood's other HTs, such as the TH-79A.

After addition consideration, my two choices are now the FT-50RD and the Icom IC-W32A. From the posts to this newsgroup regarding this radio, it seems that (1) very few people have had problems with it, (2) it's receive frequency range can be expanded by certain power-up keystrokes rather than opening the radio up, (3) it's display is better than the FT-50RD, and (4)those that have it seem to really like it (there doesn't appear to be many love-hate relationships out there regarding this radio).

As for the FT-50RD, it seems that (1) it has more features than the W32A, but some of these features don't work that great (the fm bandwidth filter, etc.), (2) the transmission quality may or may not be completely "clear" (forgive my lack of correct terminology, I'm new to all this) when operating through simplex depending upon the particular radio you receive, (3) Yaesu is aware of these problems but doesn't seem to care about fixing them, (4) many seem to be having problems with the ADMS software, and (5) those that have one seem to either totally love it or are peeved about the problems already mentioned.

My questions are: (1) For those of you with one of these radios, do you wish you had something else? Why? (2) Are my observations mentioned above accurate? (3) Being new to this, what will I not be able to receive with the more limited frequency range of the W32 as compared to the 50RD? (4) How is the Icom's software as compared to the Yaesu's? (5) Does the "true" dual-band nature of the Icom really make that much of a difference as compared to the Yaesu? How? (6) If you could only have one HT, what would it be and why?

Thanks for the help.

That's right, and equally important, the antennas at the ground stations aren't aimed at the horizion. They have patterns which aim the signal up where the aircraft are. That makes listening to them on the ground from a distance much more difficult.

I'm not interesting in starting a flame war, I'm just curious.

Once you have modified your radio to transmit out of the amateur band,
what do you do with it? Do you have a license to transmit on any
of those frequencies, such as the itinerant business band?

This mod from Joe opens up the RX (and TX) from 45-60...

ftp://oak.oakland.edu/pub/hamradio/mods/alinco/dx70.mod

Quote:

Ok, first an apology to all who sent msgs about these mods. Sorry for
the delay in getting these out here.

The Alinco DX-70 can be configured as follows:
Extended TX, open the RX up to 35Mhz and down to 30 Khz, Open the VHF
side from 45-60 Mhz RX/TX. All can be done quickly by , by removing or
changing a series of chip-resistors located in the detatchable front
face
panel. This mod is a little tricky to perform, since it uses surface
mount devices, so I TAKE NO RESPONSIBILITY IF YOU BREAK YOUR RIG.
Alinco, further, in their mod sheet, warns that performing this mod
incorrectly will NOT BE COVERED via warranty. At first, I tried using
a
Salami sized soldering iron--- take my word, get a good, very fine point
iron of about 15 or 20 watts max! Make sure it is static guarded too.

Ok...Here we go.

1. disconnect power
2. disconnect antenna
3. remove control head, disconnect control cable
4. remove 4 screws on back of control head,
5 remove (unsnap is more like it) the control head back panel.
6. THE MOD:

Once you have the back panel removed, and using the big VFO knob as
your guide (circuit board facing you, LCD display not facing you). The
VFO knob should be on the left side. On the right side, in the lower
right hand corner, you should see 2 distinct columns of chip resistors.

On the board, they are NOT labeled, but I will draw the diagram below to help you. You cant miss these because there are 5 chip resistors in the left-hand row, and the right-hand row has 7 chip resistors. Above both rows is a solder-pad.

a(::) h(::)
g-
i-
b - j-
c - k-
d - l-
e - m-
f - n-

Several chip resistors will be soldered in, depending on the model of your rig, and a solder pad is jumpered. Here are the mods per Alinco:

a. 45-60 Mhz TX/RX - solder a 0ohm or jumper across location i
b HF RX down to 30 Khz - remove the jumper m
c. beyond just Mars Mod - TX/RX everywhere remove both jumpers c and e
d. HF RX up to 35 MHZ - solder a bridge across pad a

After performing the above mods, reassemble the unit.

7. DONT FORGET to reset the microprocessor (with the radio off, hold the F button and simultaneously turn the power on.
All memories are wiped out, but the new bands are opened.

I've tried all mods with my Alinco rig and can confirm they work. I am able to pick up business band communication in the 46 Mhz range (FM), and
cordless phones in 46/49 range. It TX's everywhere now too.

I do not take responsibility if you perform this mod incorrectly, and I am not responsible for your operation practice if you choose to illegally
transmit out of band.

Thanks and again, sorry for such a delay in getting this out here.

I have an older 1278B multimode controller that I'd like to wire to the accessorie plug of my Icon 706 MK II. I called MFJ but they suggested that I buy their 40 mike switch unit. I'd rather wire in the plug. Does anyone have a current 1278B manual they could FAX me or describe the connections to me?

Thanks in advance for your help.

Hi there
The only thing I can tell you is about the FT-50RD. I bought one a couple of months ago and got rid of it very fast, worst piece of junk I ever had. Brand new out of the box, it had to be adjusted because the modulation index was very low. Even then, I got very bad reception reports. This is my 2 cents worth.

When the display starts blinking, just continue to hold the PTT and
move the radio around in different positions. Try touching the tip of
the antenna. At times the blinking will stop and the radio will
transmit. The blinking must be an indication of swr mismatch or
tuning that is not resonant.

Sorry, just can't let this one by:

Ummmmm...since when is it illegal to hate or be discontented with the
government? And in what way does hating the government or being discontented
with it justify breaking down a guy's door, handcuffing him on the floor
(pointing a gun at his pets and yelling, "freeze or I'll shoot" to be funny or
something) and then taking away everything electronic that he owns?

And, if pirates are such evil criminals, why are they only RARELY charged
with an actual crime? Most of the time their stuff gets taken under civil
forfeiture laws but they never get tried in court for their alledged crimes.
```

Sounds like they're guilty until proven innocent to me.

What's next? Maybe burn someone at the stake for having an 'evil eye'?
Round up a bunch of minorities and put them in a camp?

Do you have any idea how stupid you sound? You basically just said that
people who oppose the government should be punished for it.

You're completely out of your skull. Like I say, when the FCC pulls your
allocations and auctions them off for commercial services don't come crying
here. You won't get alot of sympathy.

I think that both 847 and 846 are correct. The Yaesu (Japan) homepage shows the factory label having FT-847 on it; while the AES (and other EXPORT model dealers) catalog has the FT-846 tag.

Manufacturers have their ways of showing themselves what is being sold at where. Like the ICOM IC750 (Japanes version) and IC751 (Overseas version) look exactly the same from the outside. Many other HAM and consumer electronic manufacturers do the same thing, too! The guts inside and specifcation is what counts.

While in the US, I can only think of the FT-846 as a potential contender for the next purchase.

Oh, for crying out loud! Get over yourself, kid. Pirate radio is
about as much about "saving America" as was Timothy McVeigh, although
on a much lower level of insanity.

"Saving" America involves a lot of hard work in the political
trenches, not playing silly defiance games that only get you blasted

by the existing power structure.

A blinking display means the VCO isn't locked. Transmit is inhibited
when the VCO is out of lock. Most of the Japanese radios behave
this way. The only services where this radio can legally operate are
amateur and MARS, neither of which need the radio to operate far
from the confines of the 2m band, so this is a moot point anyway.

I guess you and I just view the situation differently.

If your problem with his tactics is the fact that he priced the book and the rcvr separately, then could he have priced the rcvr at $215 and thrown the book in for free and you'd have thought everything was fine? Same money, just different approach......but, *his* approach allows the buyer more flexibility.

Personally, I'd rather have everything priced individually, no matter what is being sold. That way I can pick and choose what I want and what I don't. Hey, you're overlooking the potential buyer who already *has* an R-4B book (like I do) and would rather save the $15 bucks than pay for a book he already has.

If someone sees and ad and thinks the price is too high, then I'd think the appropriate thing to do would be to *email* the seller and offer him some info and advice privately. I've done that. But when someone just makes sarcastic remarks to the seller here on the group it primarily indicates one thing: The person making the sarcastic remarks doesn't have enough to do!

As to the price.....
When you say "perhaps in 5 land" you're painting with a pretty wide brush. I can't speak for other parts of 5 land, but I can indeed tell you that there has not been a mint Drake B outfit sold in my part of 5 land (central Miss.) in the last few years for any $300 that I have known about. The first thing I look for at hamfests is Drake 4 line gear, and most of it is not in mint condition, first of all. And anything that is near mint or genuinely mint is going to be a good bit higher in price. The pieces in really nice condition have started to reflect a certain amount of "collector value" in the prices I've been seeing. I hate to see that, because of what I have seen the "collector factor" do to Leica camera prices over the years. Now *that's* a situation that's totally out of hand.....

As I said, if someone wants to email a seller and offer advice and info about his pricing, that's an admirable act. But just making snide remarks in the group is pointless. And rude.

I had spoken with the designer at Valor/Pro-Am antennas. He said
that new vechicles are coming out with tinted windows that will make
glass mounted antennas impossible. So look for either a move back to
traditional trunk mounts for everything (Celtel, CB, ham) or maybe a
new idea is brewing out here.

Also Valor is reluctant to make a 6/2/440 antenna. Hopefully the market
is going to push that development. Six meters is growing, at least in
Indiana (we are the capital of 6 mtrs).

369. FS: fuction generator & pulse generator

From the information I can find, it doesn't look like the FT 847 will be available in the US. However, according to US sources it does look like the FT 846 will be available around Februrary. It still hasn't been FCC type accepted so no reviews can be made.

At last, I think someone has an accurate assessment of these two only
slightly different radios. Thanks David.

If you can look closely at the two pictures available, one on page 88 of
AES's new catalog, and the other from Yaesu's homepage, you will see the only
visible difference being the labeling on the dual shaft control at the bottom
near the right side of the radio. One has a large "DSP" over this control,
and the other shows something like "DIGITAL FIL" and a line pointing to one
of the small push buttons to the right of the dual shaft control.

PRICE IS 210,000 YEN. Covert to USA DOLLARS $1750 aprox.. The radio has
an
optional Tuner model FC-20 no price but iassume it to cost between $400
and $500.
The Icom 746 will cast 200,000 Yen or $1650 USA DOLLARS and has a built
in
autotuner but lacks the 70 CM band . Also the 2 meters is 100 watts as
opposed to
the Yaesu's 50 watts. It will be interesting to see the QST REVIEW on
both these
radios. Oh, the Icom is triple coversion while the Yaesu is double.

If anyone could be kind enough to send me their original
factory fresh template and data files for the FT-50 I
would greatly appreciate it. I can't seem to upload
mine back into the radio. I now have extended receive
but just get an error when I attempt to transmit.

p.s. Yes, I did turn the squelch off when trying to upload.
No hardware mods have been done.

Any help would be appreciated.

KB4UTZ,

As a recently licensed amateur, I went through the same decision process that you are now, although the Kenwood model was not available at the time (I probably would not have picked it anyway!). I narrowed my choices between the W32A and the FT-51, after eliminating the FT-50. I thought that the FT-50 was too small altogether, and have heard about the many problems associated with its "advanced" features. The FT-51 is nice, but very expensive when compared to the W32A. The expense was not my primary decision factor. I finally decided upon the W32A and have been happy with it. I have not purchased the software, so I cannot comment on it. All manufacturers really get you on the accessories, as far as price goes, and ICOM is one of the offenders. The 5-watt battery that comes with the W32A is way overpriced, so I bought a MAHA NiMH pack to use as a spare. The only real disappointment I've had is the case for the W32A, which is both expensive and cheap! Feel free to contact me for any other information concerning the W32A via email.

WHOA! Read it again. You'll have the same, or almost the same drivel
on free TV or maybe worse drivel you have now. That will be on
Channel 5A and they'll let anyone watch the continuous hack of the
same commercials...over and over and over. However, now the
broadcasters will have PREMIUM CHANNELS to SELL! Wanna bet HBO will
be on some of them? No dish to buy, no need for a new antenna out in
Podunk, 40 miles from town. All those people unable to use DTV
because their house is in shadow from the SW, all those out of range
of cable, will get HBO SOLD to them from Channel 5B! I didn't say the
commercial TV would stop, I just said it would be LESS. The 3 EXTRA
channels will allow us to sell PREMIUM TV to those willing to pay for
it....all on the same transmitter antenna we're using now...how nice!

>
>Subscription TV has lower risk, higher volume, but still a fairly
>low ROI. It is still retailing of programming, but more analogous

Right...try to tell that to Hughes Electronics. Those poor boys have
only X million DTV customers sending it in piles.
>
>But free advertiser supported TV is a horse of a different color.

The "free" broadcaster has just gone into the PAY TV business....His
free channel will be FILLED, I'm sure, with advertising trying to get

you to buy the football game on 5C Saturday afternoon...wanna bet?
>
>The business of the free TV broadcaster is selling an audience

>sort of revenue stream.

Those advertisers will LOVE the new pay channels! EVERYONE will have
them, not just the folks in town near the cable! Local advertisers,
left out in the cold when you put up DirecTV, are not back in the ball
game! Pinhead Ford, and his noisy, obnoxious, stupid lot commercial
can NOW get on The Weather Channel...even in the farms 30 miles from
town! He's gonna be grinnin from ear to ear!
>
>There are very few pay TV events which can command $32 an

>He isn't foolish enough to throw that away to get a lower ROI
>at higher cost and risk by trying to retail programming to viewers.
>He leaves that to the niche providers who fight over the fragmented
>crumbs outside the mass audience.

We've never had a subscription TV service available to EVERY viewer in
the country. Noone will be buying a single EXTRA piece of equipment
any more. Noone will be buying cable TV either, I hope! Those analog
SOBs and their crappy service are going to be in big trouble when the
BIG GUNS who own Channel 5 decide they can distribute HBO better.
Wanna bet HBO will think so, too?
>
>I've been doing this for over 30 years, and I know how it works, and

>who will tune in. The broadcaster will make sure of that, because
>that's where the money is.

Weather Channel isn't retailing to customers. Neither is the
Nashville Channel. These advertiser-supported services will just have
a vastly better outlet Crappy Cable, Inc. can't stop. The
over-the-air boys have just pulled cable's plugs....like cable did to
them by refusing to include airtv channels on some cable systems.
Touche'
>
>Gary
>Gary Coffman KE4ZV | You make it |mail to ke4zv@bellsouth.net

383. Ft-530 clock fix

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-04 00:00:00 UTC
From: al7dl@aol.com
Message-ID: <19971204004401.TAA19175@ladder01.news.aol.com>
Source record: 160235

Someone, I don't remember who, was looking for a way to turn off the clock on the Yaesu FT-530 when the HT is off.

After some research, I finally came up with an answer. With the HT on, press the F/M key, then press the CLOCK (REV) key, press the LOCK (5) key, and again press the CLOCK (REV) key. To restore the clock (when the HT is off), simply perform the procedure again.

Hope whoever was looking for this will see this post.

I have an oversupply of used Minitor I and Pagecom parts and I am giving them away. You can have any of the following or request something different. Most of the parts are in good working condition. The only thing you need to do is go to our web page and fill out the guest book. Then request the part you want in the box that asks for a "URL". Shipping is free allow 7 to 10 business days for delivery. Remember this is for a Minitor I not a Minitor II pager.

Housing red or gray
Top
Leather carrying case
Charger with amp
Decoder boards - good for parts only - Missing speaker and vol. control
Rec boards - good for parts only VHF
Request a part - Depending on what it is I may ship it

Supplies are limited about 50 pagers. First come first served

390. Kachina comments

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-05 00:00:00 UTC
From: sca00135@mail.wvnet.EDU
Message-ID: <199712051708.JAA03159@mailbox1.ucsd.edu>
Source record: 159992

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and

outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used

dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

There are preamp projects in The Satellite Experimenter's Handbook, The
Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book,
among other places. There are also suitable designs in *older* ARRL Handbooks.
There was recently a MMIC preamp in QST, but that won't have a low enough
noise figure to improve on an ordinary receiver at 70 cm. A few suitable
preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers
circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and
Advanced Receiver Research are well known, and make good ones. Expect
to pay from $80 to nearly $200 for these, however. One of the few Hamtronics
kits worth buying is their helically filtered 70 cm preamp. This is a good
unit,
and fairly cheap too. Forget the Ramsey junk.

Subject: FS: DSI 5612 Freq. counter (Digimax)

For Sale:

DSI Instruments - 5612 Frequency Counter (DSI is now Digimax):

- 9-digit display (7-seg. LED)
- Stable OCXO (Oven controlled crystal oscillator)
- Sensitivity adjustment with panel mounted potentiometer (knob adjust)
- Prescaler enable/disable
- Dual input -
Input 1 - 50Mhz to 1.2Ghz (1Hz to 1kHz resolution)
Input 2 - 50Hz to 50Mhz (0.1Hz to 10Hz resolution)
- External wall transformer supply, carry handle, made in USA.
- Prescaler circuit is improved for excellent 1.2Ghz sensitivity.
- In excellent electrical and mechanical condition, tested to 1.3 Ghz at

about 30mV sensitivity.

$110.00, you pay shipping. (with manual)

Jack Parmentier

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.

7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>
> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

--------------2428246C390A
Content-Type: text/plain; charset=us-ascii; name="Ft50mods.txt"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="Ft50mods.txt"

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==========
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in

> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)

- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
---
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
---
^ Band-Set_Byte (Address 0CE7)

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database?
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any

specific country. That is why the ARS does not work any more, and not?
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

Subject: 847 cost???

QST usually reviews a radio after it is in the market for 4-6 months. I
think the reason is to give the manufacturer a chance to correct
mistakes. MFj complained that the TNC 1278 go a bad review since it was
the first batch off the assembly line(trust me it wouldn't
have made a difference if it was 6 months later. Hee hee). If Both the
Icom IC-746 and
Yaesu FT-847 come out in February/March 1998 I would expect both to be
reviewed
by the Fall of 1998.

Subject: Alinco $88 handhelds

I called last Wednesday and ordered $88 UHF model by phone. It was
delivered on Monday, not bad considering no UPS deliveries on Thursday
and Friday. Also, the $88 included prepaid shipping. Where can you
beat a deal like that?? It is a great little radio, works great
keying our 443.450 repeater that is about 12-15 miles away (as long as
I am outside the steel roofed office building). Come on guys, give it
a break, its an $88 radio.

From: m_white@juno.com (Michael White)
Subject: FS: Vibroplex Iambic Deluxe paddles, plus matching keyer control panel

For sale: Vibroplex Iambic Deluxe paddles. All chrome parts and base with red finger paddles. In mint condition; entirely as new.

Includes an accessory panel for controlling a keyer. This is a small box that attaches on the side by means of existing screws on the bottom of the paddle; no modifications. The box has 4 small pushbuttons for controlling various functions of a keyer; you wire it up as needed. The box is very nicely chromed

and matches the paddle base exactly. The pushbuttons are red, matching the finger paddles.

I also have a very nice plastic cover for the paddle that I'll include. It has

my callsign neatly engraved in it, so you'll never forget who you bought it from :-)

$95 shipped UPS anywhere in the lower 48 states. Email if interested. Thanks.

Mike, N4PDY

YEASU FT920 TX OUT OF BAND

With the radio off, press[STEP] and [LOCK] (under VFO-A) and hold
these two keys in while you turn the raido on. Now release the two
keys.
Enter the following password: 0761161, then press [ENT].
Press [MENU],Rotate VFO B though the "U" settings till you get to the
"F" Menu (F-01 F-35).

TUNE to "F-35 your Display will say "DESTINA" PRESS ENTER
AND SELECT "OUTSIDE",Using VFO B.that is all there is to it!!!
THIS WILL LET YOU TX 1.8 TO 54MHZ,TO UNDO THE MOD SIMPLY SELECT F-35,
AND PUT IT BACK TO "USA"

The only other adjustments that are of any use is F-09 AM modultation.

After adjustments are made, Press [MENU] to save the new setting and,
exit to normal operation.
```

WARNING ANY OTHER ADJUSTMENT CAN AND WILL DEGRADE THE RADIO'S
PERFORMANCE.
I CANNOT BE RESPONSABLE FOR YOUR ACTIONS...

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias
correctly!

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

I had one of these installed ($75) when my house was built, but was very disappointed when later I examined the specs and found it was not as good as what I was already using in my Triplet and APC outlet boxes. Compare specs and make sure you get a decent one.

It's not that they don't feel it is worthwhile, it is the problem that their
police force uses to 222 band for enforcement, and no one there can own one,
so
they are making the units for the North American market only.

Subject: Alodine aluminum treatment

Loek,

I dunno where to by Alodine powder, but I bought the PPG equivalent,
"DX503" SOLUTION at my local industrial/automotive paint supplier. I
live in Gainesville, FL, population ~ 100,000, and there were two
suppliers that had it in stock here.

Alodine (alodyne?) is a Dupont trademark for a "chromate conversion
coating". DX503 is the equivalent stuff which leaves a golden finish on
the aluminum; there is also a "clear" version. Both are primarily used
as a paint prep, but I used it for its electrical properties.

Date: Tue, 02 Dec 1997 20:03:28 -0600
From: KB4UTZ@yahoo.com
Subject: HELP!! I need some advice on my first radio (HT) purchase!

I need some help from those of you with handy-talkie (HT) experience.

I just passed my Tech Plus exam and am now in the process of choosing my first radio. I enjoy hiking, camping, and backpacking so I am currently leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I do plan on listening/using the radio during my daily commute of about 25 miles into metro Atlanta (Georgia) also though.

My specific questions are:

1. What radio would you recommend for a 2m/70cm beginner like me? Mobile or handheld? Why?

2. Depending upon the answer to #1, what radio(s) would you recommend and why?

3. As I stated before, I am leaning toward a handheld... in particular possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both have the MIL-STD 810 rating. Would either of these two radios be a good choice? Would one be preferable over the other? Why? What are the pros and cons of each radio? Or... should I forget these two radios and consider something else altogether?

4. Are there certain radio manufacturers that I should stick with (or conversely avoid) in consideration of radio quality, frequency of repairs needed, etc.?

Thank you in advance for any assistance you can provide.

Kirby Davis (KB4UTZ)
Douglasville, GA

I attended an HDTV seminar given by Hap Griffin, WA4UMU, at the Sumter, SC hamfest this year. Hap is a great engineer with SC ETV. The modes TV will be using VARY, at the whim of the broadcaster. HDTV, wide screen 16X9 aspect ratio will occupy the entire spectrum of a channel. However other, more profitable modes, will obviously be used. 4 "standard resolution" TV channels may be broadcast. Or, one or more of the standard resolution channels may be used for data broadcasts (internet, for instance) that could be more profitably sold to a third party. I really doubt US viewers will ever see a wide

screen HDTV signal broadcast over the air that would hog the whole channel. There's just TOO much money to be made renting out the other services.

During the question period, I asked Hap who would control my television...me locally or my broadcaster. I preconceived the answer...THE BROADCASTER will control all new television sets. He may allow you to watch the infomercial channel on your serialized receiver, just like he does now with DSS. If you wish to purchase a movie from Channel 5's HBO channel, you may wish to subscribe by calling Channel 5's local order line whereby they will turn on HBO so you can watch it, as long as you pay the bill...or...you may wish to watch one of our subscription channel movies, one movie, charged to your credit card by our friendly operators. If you think TV service is going to improve with digital TV, you must have slept through this presentation. Television is going to be a BROADCAST SUBSCRIPTION service and the FCC is going to give it to them. Your converter box will, of course, be COMPLETELY CONTROLLED by the broadcast station, just like your DSS box is now. Of course, we'll need the model and serial number from your box's program card inserted in the front of it before you can subscribe to CHANNEL 5! We'll charge basic TV service to your Mastercard...Then, well advertise the hell out of you like cable channels do now. Bon Appetit!

>Dick W0EX

The picture and sound at the converter's output will look exactly like
DSS does now. It's the same technology. HDTV will never be
transmitted because the broadcaster will be allowed to have 4
"standard mode" channels which is more profitable as they can SELL YOU

SERVICE. They will be in full control of your converter box, just like DSS is....right over the UHF TV spectrum.

I haven't seen any posting about the FCC selling off 1/2 of the VHF TV spectrum after 2006. The decision has not been made which side of the FM band will be sold, but the FCC will either sell off Chs 2-6 or 7-13 (something like that) at auction to the same speculators who bought up the 220 ham band spectrum. This was also part of the ETV presentation I viewed. Selling off this spectrum will have two great benefits to ham radio, however. It will take a lot of the heat off selling the 2 meter ham band to the highest bidder. With so much other spectrum available, we may still be allowed our little 4mhz slice of heaven. It may save 440, also! It will get their greedy little lawyer minds off ham radio's bandspreads for a while, at least...if we don't die of old age clutching our morse code in the process.

Please have your Mastercard, Visa or Discover card number and expiration date handy when calling the Channel 47 Order Line. Did you want to buy The Young and The Useless today?

As the broadcaster will be in control of what you see, this HDTV sporting event will be, as with DTV's sports channels, a PAY TV option. Unpaying viewers will be watching other infomercials from other broadcasters during this period. The FCC will not stop them, either! It was part of the deal....(c; Broadcasters, I'd bet you, will stay as much time as possible on the 4-channel NTSC mode...letting you watch free one channel of infomercials or BUYING the other 2 or 3 by calling the station's order line with your mastercard in hand. WAnna bet?

There will be very little "free" commercial television. They may let you watch old reruns of Mr Ed on the free channel. The ONLY reason they are so positive about this new digital system is it leaves the BROADCASTER in control of YOUR television set for PROFIT. FCC is turning over-the-air broadcast TV into your DSS system. Non-paying subscribers will probably get 3 or 4 free channels of old reruns and stupidity like they do now. We'll sell the rest over the phone downloading the turnon codes at will to your "converter box" or digital receiver. ALL receivers will be programmed like DSS is now.
>
>Broadcasters are taking an enormous gamble on

There will be many new billionaires in the TV biz. Your perception that they are going to give it away like they are forced to do now by the current technology is wrong....all wrong. Business does everything to increase profits...Digital Television is one of those. Just watch it!

Virtually all HF rigs with CTCSS are dip switch programmable. I agree,
its a nusciance. The Mfgs. are not getting the hint.
There is a simple mod that can be done that will allow wider RX coverage
and transmit on all bands. (Works on my non-H version - should be the
same for the H) The mod is out here on the Internet and fairly easy.
I've had mine in my truck for 2 years and love it. I use it mainly on
40 M.
Good luck -

I don't want to be a wet blanket, but .... I seem to be missing
something. It doesn't look like there is anything new, revolutionary,
or even slightly evolutionary about this radio....

It is not that much better than the existing competitors radios...
What would be really exciting would be if it was easily adaptable
to digital speeds greater than 9600 baud... after all P3D, is coming.

>Don/ve6ci
>ve6ci@telusplanet.net

Hello Don,
The following is a slightly modified version of an article that I posted just last week for a similar request.

I have the TS-450 rather than the TS-850, but I would be very surprised if there were any differences in the 6 pin connector ACC-1.

In fact, the User's Data for the IF-232C, itself, says that it is designed for transceivers capable of computer control, such as the TS-940S and the TS-811/711 series.

I have used the Kenwood IF-232C External Control Interface with it, and it works fine.

Here's the pinout per my data sheets:

1 Signal Ground
2 Transmit Data (Output) (TXD)
3 Receive Data (Input) (RXD)
4 Transmit Enable (Input) (CTS)
5 Receive enable (Output) (RTS)
6 N/C
Note that the meaning of "Transmit" and "Output" refer to signals from the transceiver to the PC.

The data sheet also indicates that whereas the PC's serial port is RS-232C (-12v to + 12v), the Transceiver uses TTL (0 to +5). I guess that explains why it is you can't just connect the two ports directly together - Hi.

One other point of interest. As is the case with almost all RS-232 devices, remember that the connection between the Transceiver and the PC MUST connect Transmit Data to Receive Data and vice versa. Likewise the CTS/RTS lines are also cross connected. Well, that's consistent, isn't it?

Don't forget which pins are which on the PC side. Depending on whether you have a 9 pin or 25 pin connector, as follows:

Signal 9pin 25pin

TXD 3 2
RXD 2 3
CTS 8 5
RTS 7 4

GND 5 7

I should point out that the IF-232C unit uses a 4 circuit Opto-isolator chip, a power regulator chip, and two chips for line driver/conversion functions. It does a great job with a cable length of 100 feet, so I'm satisfied that it is noise free. I can't remember for sure what software I used but there were two shareware programs that work fine, and I got them from the QRZ CD-ROM.

If there's anything else you need, don't be bashful.

P.S. I have used two different shareware programs with this interface
over a 100' cable and it works fine.

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias
correctly!

From: Felix
Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio
to be available in the USA in Mid February 1998. I don't think it has
aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next
to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ
IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same
IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP
Tuning " in the ausio section.

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP

Tuning " in the ausio section.

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because both have their advantages and disadvantages. Nothing wrong with picking up the HT first. Since you mentioned you like hiking (far away from a repeater?) , I would steer or lean toward a radio that has the potential of putting out 5+ watts. This narrows down the field. At 5 watts, then I would see which radio has or can get the larger battery so you have more air time. No fun having a radio with 2-4 hours of battery life between recharges and be on a hike and run out of juice. This again narrows the choices.. Plan on getting an optional antenna cause the rubber duck antenna will work fine in cities but the further away you get, the worse the performance till nothing.. Do you have adequate 70cm repeaters in your area to warrent the dual bander? If not, you can save a bundle of money that could go toward the mobile, by buying a single band radio.. Buy a single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all beginners at one time. I would suggest joining a Ham club in your area and asking the members for their opinion and experiences and they would be glad to show you their radios up close and in person and tell you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and mobiles... Hummmm, not much help am I?? I have a mixture of all four brands if that tells you anything, and each one does something a little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things about both... Like I mentioned above, if you are hiking far away from repeaters, I would want a radio that puts out 5+ watts and have a relatively large battery capacity, with a telescoping antenna... Do these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

Subject: Surge supressor for breaker box?

I understand that there is a surge supressor available that is installed at
your homes breaker box. Does anyone out there know where I can get one of
these? I am going to have my house rewired soon and wnat to have one installed
at the
same time. Any info on this will be greatly appreciated.

Subject: Newbie Question / Mini receiver

Hello,

I_m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can_t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Richard

One of the best buys is the Alinco DR 140T. It is a bare bones transceiver which works well. Kenwood is also marketing one for around $250 as is ICOM with their IC-2000.

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good to deal with.

Phil

The slow, but steady drift towards anarchy continues.

We are cursed with a President who rejects all standards (legal and moral) that have applied to all previous presidents, and a citizenry who now believe they may freely make their own rules.

I guess it has been a pretty good "run", this great experiment, America. Count the days - we cannot long survive when selfishness prevails. Such was not the nature of the foundational expectations of our founders - our system will not tolerate pervasive lawlessness.

Too bad too, this is the best system ever implemented in the history of humanity. I pray that the completion of the disintegration may be stalled until my children are old enough to cope better. :-(DavidC

I doubt you will be able to add much frequency coverage to the '42.
And as for adding 66-88 Mhz(midband)-don't bother....you have to disable
30-54 coverage to get the 66-88-you can't get both at the same time.
Even if you did not mind using 30-54 coverage, the tuned circuts are not
tuned properly for 66-88-in fact not only is the tuning different, but
several parts have different values on a unit designed to operate at
66-88.
Also, in the USA, those freqs are mostly used for TV audio, wireless
mikes, and audio enhancement devices.
Almost all of the above use WFM.
Since the PRO-42 can not receive WFM, you would get a rather distorted
result.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Does anyone know of a system for detecting lightning strikes within a pre-defined area which displays the results as a 3D image on a computer? There used to be a company in Texas that supplied such a kit in the early 1980's. It involved placing 4 RX masts around a town and combining the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

I obviously don't give a damn what the FCC does, says or makes as
'rules", I, as I said, am absolutely alone in what I am doing in my little town.
The "local" station here is AM and could care less. The beer pub was only the germ
of the idea, not the base of operations, though we're now toying with the idea of
direct broadcast's when certain blues artists are there. The closest FM station is
25 miles away and is 10 MHz higher than my signal. There is nothing to argue
about.

For Sale:

DSI Instruments - 5612 Frequency Counter (DSI is now Digimax):

- 9-digit display (7-seg. LED)
- Stable OCXO (Oven controlled crystal oscillator)
- Sensitivity adjustment with panel mounted potentiometer (knob adjust)
- Prescaler enable/disable
- Dual input -
Input 1 - 50Mhz to 1.2Ghz (1Hz to 1kHz resolution)
Input 2 - 50Hz to 50Mhz (0.1Hz to 10Hz resolution)
- External wall transformer supply, carry handle, made in USA.
- Prescaler circuit is improved for excellent 1.2Ghz sensitivity.
- In excellent electrical and mechanical condition, tested to 1.3 Ghz at

about 30mV sensitivity.

$110.00, you pay shipping. (with manual)

Jack Parmentier

(Note: see Amateur Electronic Supply catalog for Digimax Frequency
Counter products, similar in appearance to model D612 counter)

434. WTB: 6M all mode

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-05 00:00:00 UTC
From: Bob Robert <who@who.com>
Message-ID: <who-0512971131340001@209.122.32.16>
Source record: 160057

My 12 y.o. son is a new ham, and wants to get on six meters. We're looking for an all-mode unit (FM and SSB), power not too important. Would consider an HF/6M rig.

Please email to xxjturner@mapwizards.com, without the 'xx'

Thanks

John Turner

>Been curious about this for a long time. WHY is all aircraft Tx AM and not FM?

It is primarily just a historical artifact. Back when they started putting radios in airplanes, AM was the dominant voice mode, so the radios were AM. Inertia, and a very large installed base, has kept it that way. AM is generally "good enough" for air to ground communications, and it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant AM carrier makes DFing fairly easy. And there is no FM capture effect, so doubling is detectable, and often one can copy both signals rather than just the stronger one. This has a safety benefit. AC could switch to SSB, and they have for long HF circuits, but that loses the ability to DF the signals easily because of the lack of a constant carrier.

There are preamp projects in The Satellite Experimenter's Handbook, The Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book, among other places. There are also suitable designs in *older* ARRL Handbooks. There was recently a MMIC preamp in QST, but that won't have a low enough noise figure to improve on an ordinary receiver at 70 cm. A few suitable preamps have appeared in QEX. You really want a GASFET design. Far Circuits offers circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and Advanced Receiver Research are well known, and make good ones. Expect to pay from $80 to nearly $200 for these, however. One of the few Hamtronics kits worth buying is their helically filtered 70 cm preamp. This is a good unit, and fairly cheap too. Forget the Ramsey junk.

This is hardly a feature. Image rejection is something designers have
worked hard to improve over the years, ever since Armstrong invented
the superheterodyne receiver. Many a person with a cheap receiver has
suffered becaue of it's lack of image rejection.

If signals come in at an acceptable level on the image frequency, then
that receiver isn't very good at doing what it's suppose to, namely
receiving signals on the frequency where the image signal overrides.

And how do you know that you are in fact receiving cellular phone
calls? I thought (though I haven't looked up the details) that
there were cordless phones in that frequency range. That's the
problem with receivers that have bad image rejection; you have to puzzle
over whether you are hearing a real signal or an image.

In amateur radio, wide frequency receive coverage seems to have become
fairly standard with 2meter equipment. Is it manufacturer's wanting
to add another sales feature, or hams who have to be able to receive
those "police bands"? But then people who buy those rigs turn around
and complain about unwanted signals.

But there is a direct correlation between the "features" and the problems.

Despite the physical different, Yaesu really has got me confused. Their
US hp (www.yaesu.com) says that their new product is called FT-847, which
is totally contradict to my original thought.

I can't help to wonder if their manufacturing plan is that mixed up like
their marketing department, hehe... Maybe the Yaesu US has gotten so
confused that they don't even know which model is being examined by
the FCC. That's why they don't have a picture posted on their webpage,
while other dealers just can't wait to let us see the spy preview.

Ok...Thanks for all the replies to my questions. I guess the radio does work. I was just curious about the TX range because I own other brands and they give me a broader spectrum. Anyway I really don't have a use for those frequencies, but it would be nice to have in case of life or death situation. In that case I probably wouldn't mind if what I did was illegal, in order to get in contact with someone for help.

In my opinion it is better to have than not to have. Just a bit of extra security. That's my 2 cents again.

Thanks,
Cyberbob :-)

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to look at a price thats posted, and then make assumptions about it's fairness, with *no* knowlege whatsoever about the specific items that is being sold. They feel justified in commenting in some very negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this example, $15 is what I had to pay for that manual, separate from the R4B, and, I had to look for it for weeks. The fellow that I bought it from answered and inquiry from me about something else, and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer the matching manual with the rig, which, I'm am also selling at my cost, it is just that nice. I would personally prefer to keep the manual for myself, but I figure that a guy that gets a shiney new R4B will enjoy the experience even more with an <original> pristine manual. Bill, if you saw them you'd know, the fellow that bought these two items for $215 will be a friend for life...

This is concerning the FT-50R.

I think it's a great radio, too.
I don't have any equipment to measure deviation, modulation, power output, etc, so I have nothing to complain about there. However, if you have any qualms with the aforementioned specs, you can change them easily.
The radio itself is a hardy, well-built radio. It seems like everything is sealed with a rubber gasket. (Nonetheless, get the case for it.)
As for your questions, which you probably want anwswered:

(1) For those of you with one of these radios, do you
wish you had something else? Why?

No. Because I like it: personal preference.

(2) Are my observations mentioned above
accurate?

I'm not as picky about those things as others are. When I have a need to care, I'll make a fuss over the specs. Some semblance of 5W is all I need.

(3) Being new to this, what will I not be able to receive with
the more limited frequency range of the W32 as compared to the 50RD?

Can't help here. But I know hearing NOAA is nice.

(4) How is the Icom's software as compared to the Yaesu's?

Don't know. I do know that I haven't had a problem with Yaesu's software yet.

(5) Does the "true" dual-band nature of the Icom really make that much of a difference as compared to the Yaesu? How?

"True" dual-bandness can drain your batteries faster. And who can actually listen to two simultaneous transmissions? Dual Watch is functionally just as practical for most applications.

(6) If you could only have one HT, what would it be and why?

I do only have one HT and it's the FT-50R.

I'm sorry I can't compare these two HT's for you. Both have their advantages. When I sent the FT-50R in for replacement of a Power button (defective), their service was prompt and courteous. I got it back within two weeks.
Read the other arguments for/against the FT-50R. Ultimately, however, it's your choice.

Hello,

I�m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can�t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Richard

I on the other hand think it is a great radio. Yes, I have heard that SOME units had low audio but that was fixed quite easily. The deviation had to be turned up. You didnot have to open the radio up to do this. You must decide if you want a "true" dual band or a dual band radio. Yes the FT-50 is a dual band but you can only receive ONE band at a time. And this is it's biggest drawback in my opinion. But it still is one of my favorite radio's
73 and good luck Mark

Date: 1997-12-05 00:00:00 UTC
From: ka2ykc@aol.com
Message-ID: <19971205014400.UAA21255@ladder02.news.aol.com>
Source record: 160126

You need to change the crystals; one each per 10m position on the band switch

40.4875 = 26.0 to 26.5
40.9875 = 26.5 to 27.0
41.4875 = 27.0 to 27.5
41.9875 = 27.5 to 28.0

Put them in 10a,10b,10c,10d, then you will get 26.0 to 28.0 coverage.

Simply order plug-in xtals from Jan xtals in Ft Myers Fla, put them in place oft he 10m xtals, then retweak the 10m vco's and you are in business. The freq counter is a true reading counter; it will show the 26 and 27 mhz after the mod.

The mod is the same for the FT901, however, that rig uses a readout rather than a true counter, therefor thedisplay will still show 28 and 29 for the Mhz positions. I have successfully moded 901's to show the correct mhz digit, using diodes on the display logic board.

Ah, I see. The FCC is going to assign one microbroadcaster for each local
beer pub. How meaningful ! Shouldn't take more than about 2 microwatts to
cover it, though. Ought to be able to squeeze in quite a few on the same
frequency if you space them about a block apart.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

For sale: Vibroplex Iambic Deluxe paddles. All chrome parts and base with red finger paddles. In mint condition; entirely as new.

Includes an accessory panel for controlling a keyer. This is a small box that attaches on the side by means of existing screws on the bottom of the paddle; no modifications. The box has 4 small pushbuttons for controlling various functions of a keyer; you wire it up as needed. The box is very nicely chromed and matches the paddle base exactly. The pushbuttons are red, matching the finger paddles.

I also have a very nice plastic cover for the paddle that I'll include. It has my callsign neatly engraved in it, so you'll never forget who you bought it from :-)

$95 shipped UPS anywhere in the lower 48 states. Email if interested. Thanks.

> hardly harming anyone with my lil' 20 Watts of clean RF.

Yes, but what if everyone in your city got on the air with their own
lil' 20 Watts of clean RF? Pretty obvious that no one could hear
anything. Thats why they came up with rules. I haven't checked recently
but when I was younger, it wasn't out of reach for someone to get on the
air with a 250 Watt legal station. Think about it.

Best regards,

Art Borg

Hi,
I just change my operating system from Windows95 to NT and I have some problem with the ADMS-1D software. I can upload, create template but I can't download the frequency to the Yaesu FT-50R. After 60% it says time out waiting for FT-50R. I've done everything and it still doesn't work. Please help.
Thanks
Chad

I have a Drake dream station for sale. TR-7 with NB,Fan,CW and SSB
filters,PS-7,SP-75 speech processor,MS-7 speaker,7077 Mic,R-7 receiver
that will xcv with TR-7. R-7 has NB,CW,SSB,AM filters, all cables. I
also have service kit with extender boards, tuning tools, and service
manuals on all. Everything is like new and works great. I really don't
need all this, but hate to break up. Will sell all for $1650 plus
shipping. This is a rare and complete station. Also have a MN-7 tuner
to match for another $150. 505-437-8658 or email.

Date: Tue, 02 Dec 1997 23:32:05 -0800
From: Ron Castro
Subject: FT-50R ARS Probs Fix!

Like many who hardware-modified their Yeasu FT-50R's for MARS/CAP xmit,
I noticed that my Automatic Repeater Shift (ARS) function had defaulted
to the European band plan, rendering it useless for US repeater
operations. I use the ADMS 1C programmer (v 1.04), but neglected to
save a template of the origional USA configuration. Even if I had, I
understand that making the hardware mod makes the file unusable.

Good news! Despite reports that the ARS function is "hosed" after the mod, it CAN be restored! To find out how, check out the FT-50R homepage at:
www.members.aol.com/aeimn/ft50/articles.txt
Look near the end for the Ingra-Beton article. The article shows how to use a hex-editor to change the .TPL file (although it works on .RDF files as well) to restore the functions, while retaining MARS/CAP xmit capability. I found that only ONE BYTE needed to be changed in my file to fix the problem, and although I have never edited a hex file before, it worked right away! Any hex editor can be used...I used XTREE Gold, but there are dozens of others out there, including the unfreindly DOS debug. Please read the disclaimers in the article.

One tip...read the article VERY carefully, make sure you FULLY understand it before proceeding, and if you are squemish about hex editing, talk to someone who knows about it to make sure you find the right addresses in your file the article refers to. Save a file that you know works with your radio as a back-up!

Three cheers for "Indi" for solving a problem that has stumped FT-50R users for a long time!

From: Yves Remedios
Subject: FT-8100 mod - RTM10B has it, why not share it???

In article , Kevin Swanson
writes
>I found it myself. I opened the top of the radio and looked for Zero Ohm
>resistors or Jumpers. I Found a Zero Ohm resistor in the front left corner
>looking down on the radio. Just above it and slightly to the left is an
>empty resestor position.
>
>Removing the resistor will OPEN - TX
>Adding a jumper to the top pads will CLOSE - RX to just the ham bands.
>I could not find any way to open the cellular block

Expanded TX

To change from C2>C3 or B2>B3
Remove R3028 and reset radio

To change from C1>C2 or B1>B2
Remove r3029 & R3031 and reset radio

To reset radio hold [VFO/MR] + [REV] then turn power on

Don't know about the cellular block - I'm not interested in listening to cellular traffic!

> Lawrenceville, GA | Guaranteed |
>

Hi Gary,
I agree with all your comments. On our local repeater, I was one of the people who very much wanted CTCSS to be retrofitted to the unit, so became involved in making it happen.

We are required, on 2m. repeaters, by our licence to have 1750Hz access. However, we can have CTCSS also. We have OR'd the two access modes, as you have mentioned and this gives all users an opportunity to access. CTCSS is far better, as in our application, the decoder module has a much smaller bandwidth than that required for use with 1750Hz (+/-25Hz over here for 1750) and thus an improved signal to noise ratio for detecting the access tone.
When CTCSS is detected, the squelch on the repeater is effectively off and mobile signals will 'swish' up and down rather then chop out and in with mobile flutter. The same applies in reverse on the amateurs rx.

The repeater does not generate CTCSS when giving its identification in beacon mode. Therefore with a decoder on the amateurs rx, they do not have to listen to the beacon. They only hear the repeater when someone access' it.

I appreciate that you will understand this, but these are the enhancements I was meaning in my first reply, that the average user see's as No Value

Add. They need to be convinced (not me Yves). In UK terms they ARE enhancements, but until people have seen/heard the benefits of CTCSS it is very hard to get them to understand the benefits.

Alan G.

Subject: What is the deal - Kachina 505DSP? Junk or what???

This is really kind of funny. I performed a search of all the archived news postings from this group on the Kachina 505, and of the 30 or so postings, 90%

of them where from folks begging for a review. I saw guys claim to have purchased 505's, offer side by side comparisons between the 505 and a FT1000MP

for instance, but they never produce crap. What gives? Is this rig such a piece of crap that no one want to discuss it, or better yet, compare it to anything? I've never seen a subject so avoided in my life. What gives Kachina owners? Don't want to discuss it? Waste of money? Greatest rig ever

made? Quiet, noisy, hard to use, easy to use, IF DSP suck, kicks butt, what? Blows the 1000MP away, can't touch the 870, makes the 756 look like a toy, can't even touch the audio dsp of the 920, what???????? Sorry to rant and rave, but I have 2k burning a hole in my back pocket, want to buy a new HF rig, but just can't decide, and certianly don't want to rule out a potential killer rig like the Kachina 505DSP! Thanks for listening, 73, Mike... WQ0N

Subject: 847 cost???

QST usually reviews a radio after it is in the market for 4-6 months. I
think the reason is to give the manufacturer a chance to correct
mistakes. MFj complained that the TNC 1278 go a bad review since it was
the first batch off the assembly line(trust me it wouldn't
have made a difference if it was 6 months later. Hee hee). If Both the
Icom IC-746 and
Yaesu FT-847 come out in February/March 1998 I would expect both to be
reviewed
by the Fall of 1998.

From: m_white@juno.com (Michael White)
Subject: FS: Vibroplex Iambic Deluxe paddles, plus matching keyer control panel

For sale: Vibroplex Iambic Deluxe paddles. All chrome parts and base with red finger paddles. In mint condition; entirely as new.

Includes an accessory panel for controlling a keyer. This is a small box that attaches on the side by means of existing screws on the bottom of the paddle; no modifications. The box has 4 small pushbuttons for controlling various functions of a keyer; you wire it up as needed. The box is very nicely chromed

and matches the paddle base exactly. The pushbuttons are red, matching the finger paddles.

I also have a very nice plastic cover for the paddle that I'll include. It has

my callsign neatly engraved in it, so you'll never forget who you bought it from :-)

$95 shipped UPS anywhere in the lower 48 states. Email if interested. Thanks.

Mike, N4PDY

If you can operate a screwdriver it is fairly easy. The procedure must
be followed exactly though to avoid a repeat of the problem. I will
e-mail it tomorrow when I get to the shop..

From: cfisher@klis.com (Corey,ve1kco)
Subject: FT920 MOD "NO WIRES TO CUT,NO SCREWS TO TAKE OUT"

YEASU FT920 TX OUT OF BAND

With the radio off, press[STEP] and [LOCK] (under VFO-A) and hold
these two keys in while you turn the raido on. Now release the two
keys.
Enter the following password: 0761161, then press [ENT].
Press [MENU],Rotate VFO B though the "U" settings till you get to the
"F" Menu (F-01 F-35).

TUNE to "F-35 your Display will say "DESTINA" PRESS ENTER
AND SELECT "OUTSIDE",Using VFO B.that is all there is to it!!!
THIS WILL LET YOU TX 1.8 TO 54MHZ,TO UNDO THE MOD SIMPLY SELECT F-35,
AND PUT IT BACK TO "USA"

The only other adjustments that are of any use is F-09 AM modultation.

After adjustments are made, Press [MENU] to save the new setting and,
exit to normal operation.

WARNING ANY OTHER ADJUSTMENT CAN AND WILL DEGRADE THE RADIO'S
PERFORMANCE.
I CANNOT BE RESPONSABLE FOR YOUR ACTIONS...

>How does the IC706 detect that a tuner is connected?
>The manual is not very useful.
>
>Arne
>
>SM6VR
>

Arne,

I asked this same question of the newsgroup and got this reply:

Subj: IC-706 AH-3 connector
Date: 97-11-04 04:51:33 EST
From: jtn@te-cats.COM (John T. Nogatch)
To: jdonimi@aol.com

I investigated the AH-3 connector on the IC-706 so I could
make the TUNE button do something useful without an Icom tuner.
Eventually, I came up with a small circuit which plugs into
the AH-3 connection, and fools the IC-706 into thinking
there's a tuner connected. The TUNE button now puts it
into 10w CW keydown mode until pressed a second time,
regardless of the mode setting. I find this a great convenience.

The 4 pins are:
. ground

. 12v fused for 0.5a (?)

. TSTRT normally high, this pin pulses low twice when the
TUNE button is pressed, telling the tuner to start or stop.

. TKEY normally low if no tuner connected, in which case the
TUNE button is non-functional.
TKEY normally high is tuner is connected. After receiving the
TSTRT signal, the tuner may assert TKEY low to key the transmitter.

I don't remember which pin is which. After I got this circuit working,
I concentrated on making QSOs.

Note that the AH-3 connector doesn't work on 6m.

From: frog207lillypads@juno.com
Message-ID: <66cibe$71m$1@news.ncal.verio.com>
Source record: 159844

I'm sorry I started this thread now. I eat my words. I emailed Amateur Electronic Supply asking them about their add for the FT 846 in their new catalog (with picture). They responded and said Yaesu contacted them AFTER they had printed their new catalog. Yaesu said they had CHANGED the number and that it would be an FT 847.

So, again I appologize for even starting this thread, although it was an honest mistake, given the photograph of the FT 846.

Ed

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to
look at a price thats posted, and then make assumptions about it's
fairness, with *no* knowlege whatsoever about the specific items
that is being sold. They feel justified in commenting in some very
negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this example, $15 is what I had to pay for that manual, separate from the R4B, and, I had to look for it for weeks. The fellow that I bought it from answered and inquiry from me about something else, and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer the matching manual with the rig, which, I'm am also selling at my cost, it is just that nice. I would personally prefer to keep the manual for myself, but I figure that a guy that gets a shiney new R4B will enjoy the experience even more with an pristine manual. Bill, if you saw them you'd know, the fellow that bought these two items for $215 will be a friend for life...

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias

correctly!

Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect the radio
to be available in the USA in Mid February 1998. I don't think it has aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380 for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same

IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP
Tuning " in the ausio section.

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP

Tuning " in the ausio section.

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I

>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because both have their advantages and disadvantages. Nothing wrong with picking up the HT first. Since you mentioned you like hiking (far away from a repeater?) , I would steer or lean toward a radio that has the potential of putting out 5+ watts. This narrows down the field. At 5 watts, then I would see which radio has or can get the larger battery so you have more air time. No fun having a radio with 2-4 hours of battery life between recharges and be on a hike and run out of juice. This again narrows the choices.. Plan on getting an optional antenna cause the rubber duck antenna will work fine in cities but the further away you get, the worse the performance till nothing.. Do you have adequate 70cm repeaters in your area to warrent the dual bander? If not, you can save a bundle of money that could go toward the mobile, by buying a single band radio.. Buy a single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all beginners at one time. I would suggest joining a Ham club in your area and asking the members for their opinion and experiences and they would be glad to show you their radios up close and in person and tell you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and mobiles... Hummmm, not much help am I?? I have a mixture of all four brands if that tells you anything, and each one does something a little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things about both... Like I mentioned above, if you are hiking far away from repeaters, I would want a radio that puts out 5+ watts and have a relatively large battery capacity, with a telescoping antenna... Do these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

From: dont.try.it@nospam.de (Richard S.)
Subject: Newbie Question / Mini receiver

Hello,

I_m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can_t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Richard

Subject: Looking for heavy old nonworking radio.

Hi,
I am looking for a heavy old nonwoking radio for my Son to play with!
Must be clean and safe: Knobs need to have set screws holding them on to
prevent removing and swallowing. He is only 21 months but loves to play
with my
working stuff.
I posted in boatanchor group first.
Thanks,
Jack

Subject: QRP rig OHR100 vs. Norcal 40a

My first real kit was a NorCal 40a. I had a few building problems of my own. I
called the compamy up, after working with a local ham, and he tried to talk me
through the problem. I had a bad solder joint, and we got it all fixed up.

Over all, very satified and would recommend Wilderness Radio to any one.

Brian, kf4frp

From: jeffreyh@Hawaii.Edu (Jeffrey Herman)

Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've

seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

From: Phil Wheeler
Subject: QRP rig OHR100 vs. Norcal 40a

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the
NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely
draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since
I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good
to deal with.

Phil

End of Ham-Equip Digest V97 #1486
****

Date: Sat, 06 Dec 1997 21:46:34 -0800
From: Michael Aust
Subject: IC-746 Spectrum Scope Thoughts/Comments

The IC-746 is on the back cover of the AES catalog, it
really looks like the 706Mark II, but with tuner built in,
DSP, and a 100watt amp for 2meters, which is really that they
extened the hf to 6mtr PA to now to go from Hf to 2mtrs.

I think Icom would like to led you believe the Spectrun Scope
is real time(meanining you can watch the Spectrum Scope at the same
time while listening to the radio (exacly like the IC-756 or IC-781).
I seriously doubt that is the case.

To at the same time, in order to do this, they need two VCO's ,
one for listening, one for the scope.

The Spectrum Scope sweep is probably the same sweep speed as in
the IC-706 Mark II.

The 706 Mark II and IC-746 sweep is faster, than the IC-756, but
I think it is not a fair statement, since the IC-781 scope is near
real time, while the Ic-756 is a near second.

The Spectrum Scope is no Hewlett Packard Spectrum Analyzer, but
a handy gadget to see band activity.

Any other thought welcome.

73

Mike

Maybe what we need are a number of relatively inexpensive (under $150) kits
for this band.

Cliff

From: Arne Nilsson <sm6vr.arne@mailbox.swipnet.se>
Subject: IC706

I would like to connect my home made antenna tuner to the IC706 and get
it working via the "tuner/call" button. Does anyone know the
specifications for the Accessory connector or the connector for AH-3?
How does the IC706 detect that a tuner is connected?
The manual is not very useful.

There are preamp projects in The Satellite Experimenter's Handbook, The
Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book,
among other places. There are also suitable designs in *older* ARRL Handbooks.
There was recently a MMIC preamp in QST, but that won't have a low enough
noise figure to improve on an ordinary receiver at 70 cm. A few suitable
preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers
circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and
Advanced Receiver Research are well known, and make good ones. Expect
to pay from $80 to nearly $200 for these, however. One of the few Hamtronics
kits worth buying is their helically filtered 70 cm preamp. This is a good
unit,
and fairly cheap too. Forget the Ramsey junk.

Subject: FS: DSI 5612 Freq. counter (Digimax)

For Sale:

DSI Instruments - 5612 Frequency Counter (DSI is now Digimax):

- 9-digit display (7-seg. LED)
- Stable OCXO (Oven controlled crystal oscillator)
- Sensitivity adjustment with panel mounted potentiometer (knob adjust)
- Prescaler enable/disable
- Dual input -
Input 1 - 50Mhz to 1.2Ghz (1Hz to 1kHz resolution)
Input 2 - 50Hz to 50Mhz (0.1Hz to 10Hz resolution)
- External wall transformer supply, carry handle, made in USA.
- Prescaler circuit is improved for excellent 1.2Ghz sensitivity.
- In excellent electrical and mechanical condition, tested to 1.3 Ghz at

about 30mV sensitivity.

$110.00, you pay shipping. (with manual)

Subject: How much power do aircrafts TX?

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.

6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>
> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

Content-Disposition: inline; filename="Ft50mods.txt"

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==========
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in

> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)

- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
---
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
---
^ Band-Set_Byte (Address 0CE7)

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database?
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any

specific country. That is why the ARS does not work any more, and not?
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

From: sca00135@mail.wvnet.EDU (Sam Hall)
Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue.

I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

Neither does the radio cover the UK 4m band (70.0 to 70.5 Mhz).

>CW/SSB mode on this receiver? Thanks.
>
>Mike, N4PDY

Mike,

the AVC only works on AM, not CW or SSB. Had a 110 for over four years
and no one could get that to work. I recall something in the fine
print on the manual. The '110 does not use a product detector like
upper grade radios do... therefore the AVC is prone to overload from
BFO leakage. I have an HQ-180 and it works fine in that one.

Richard,

Go ahead and get the Sony if you like it. My past experience with
their shortwave radios has been good. I'd much rather see you buy a Sony
as opposed to a Sangean unit. I have a Sangean ATS-803A (Realistic
DX-440) and it's a very nice radio, but I get interference something
horrible from our TV and FM transmitters. I live about 15 miles from the
antenna farm in Cedar Hill, Texas....that's really bad......Good Luck
with your choice....de Todd KB5TMD.

499. TM-733 Cross Band Repeat mode ??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-06 00:00:00 UTC
From: Dirk Schuurs <dschuurs@worldonline.nl>
Message-ID: <01bd0293$99da23a0$ba86f1c3@none.worldonline>
Source record: 159849
Cross-posted to: rec.ham-radio,rec.radio.amateur.equipment,uk.radio.amateur

Hello,

It seems to be possible to operate the TM-733/E in Cross Band Repeat mode.
In the American (733/A) version it's only a software trick and already
installed from factory (altough not documented in the manual.) :

```
------------------------------
Cross Band Repeating (source N5LJV)
------------------------------

Cross band repeat isn't documented but comes ready from the factory.
To enable cross band repeat from the front panel, first select a band
by pressing BAND SELECT. Then, change the control to the other band by
hitting [CONT SEL]. Next, press [F] for one second, then the "X" button
(far right side). Decimals will appear between the Kilohertz digits, and
the "ON" indicator will light momentarily. The microphone sequence to
enable cross band repeat while in remote control mode is "DC".

The transmitter hang time can be toggled between 500ms to 0ms by
turning on the radio with [LOW] pressed. They also recommend enabling
the Time-out Timer, for obvious reasons.

Note that the TM-733 can also be used as a "one-way" cross-band repeater.
For example, if you can receive a distant repeater with your HT, but have
difficulty getting into it, you can use the TM-733 to boost your
transmitted
signal. To set this up, just omit the part where you "change the control
to the other band by pressing [CONT SEL]." Doing this will setup the
TM-733
to repeat your signal to the other band, but will not retransmit the
distant
station back to you. If this sounds ambiguous, play around with it a little

and it will begin to make sense.
(SOURCE: N5LJV)
------------------------------------------
```

In the European version of the 733/E we have to make a hardware
modification first to get the "X" symbol on the display , and thus to put
the rig in Cross Band Repeat mode !

Who can tell me more about this hardware modification ??

tnx es 73 de Dirk, PA3GWL

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty)
condition. Said to be in use when the Ham became silent key 6 years ago.
Would restore to new and has spare 3-400 Z tube as well as the one in it.
$450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1
with power supply in separate case that is a bit larger. Have Dow Key
relay box for use with older rigs. I wont say it is working now, but its
obvious that it has and nothing is burned or looks bad. Would consider
trades for newer amps or HF gear, Im just not a collector and already
have an Alpha. Thanks, feel free to inquire about possible trades.

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting
or anything else very serious. It was a nice upgrade for me from a TS-450.
For what I want to do, it is a very nice rig at the right price. I am able
to hear and work a lot more dx with the 920, and 6M is a lot of fun when the
band is open.

From: k1bqt@aol.com (K1BQT)
Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt
transceivers that put out signals in the 10 watt range. Commercial class
aircraft use more expensive radios that run on higher electrical system
voltages and put out considerably more power. Control towers generally run
low
power because the stations they are talking to are all in the local area and a
thousand feet or more up in the air. If you want to hear distant towers
clearly, you may need to install a directional antenna with a mast-mount
preamp.

Hope that helps.

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When that giant rolls over, all the lesser players have to pay attention. Of particular interest to amateurs, the final bandplan releases the spectrum currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed spectrum may be able to relax some of the pressures placed on amateur VHF/UHF allocations by the little LEOs, and others, desiring new spectrum below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable implications with regard to TVI susceptability. That also is of interest to amateurs. And it isn't all good news because broadcasters will be sharply reducing power, so over the air TV will become more of a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation and coding. But DTV will *not* use the sort of robust FEC which would make it immune to all types of interference (that would require more

bandwidth for the coding overhead than is available in a 6 MHz channel). And the 8VSB modulation chosen is also not an ideal choice for operation in the face of certain types of interference. If DTV is successful in luring many viewers away from cable, amateurs are bound to face new TVI challenges.

We may also see the reverse situation, IE DTVs interfering with amateur equipment. A DTV receiver will be more computer than TV, and we already know the RFI computers can generate. The sweep rates (and magnitude of sweep currents) for the large 16:9 HDTV displays will also produce a new level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be aware of how we are likely to be affected by these sweeping changes in the TV broadcast market. And we also have to be aware of who our new neighbors will be in the newly vacated TV spectrum. There may be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will have implications with regard to what will be cost effective for amateurs to adopt and adapt from it for our own uses. High speed RF modem technology will be sharply impacted by the mass market DTV receiver. A new generation of fast and cheap RF modems based on DTV technology could have a major impact on the sorts of operations amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current
large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way. I know that it can be done if one "activates" a jumper. But, there are two questions: 1 - Where is the jumper? 2 - What are the programming steps? (I believe that it is similar to programming a scanner, but I have no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE reply via e-mail (at least cc me via e-mail) as I do not have access to a news server that carries this group.

Thanks,
Richard

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen

that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL
REPORT : INTRODUCTION TO THE FINANCIAL MARKETS & TRADING OPPORTUNITIES IN COMMODITY, CURRENCY & FINANCIAL FUTURES. (Available on request)

Subject: Butternut 2mtr Tuning?

Hello,

I have a Butternut 2meter trombone base antenna, but I am having trouble getting the SWR down. Does anyone have the tuning information for the gamma match?

Any information would be appreciated.

Thanks!

--------------54DA3C953D9A
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage
HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S

which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who has any experience with this rig to give me some additional feedback on it's performance and user satisfaction. Thanks in advance.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

Subject: ssb filters

Hi little fellows.Sorry for bigga' shapes.
well, I'm living in an ex-soviet heavy-splattering area, that
means that very often I have to deal with square QRM.
na' getting to the point: I need a piece of 1.8kc ssb filter
on 8.83Mc IF stage for the TS440S.I don't mind for one even
used or a pair used 1.8kc - 0.5kc used but still OK.Do I have
a deal for $100 the pair?
we'll answer to each and every mail but don't exced this
price. We'll consider shipping.That was. Over.

Please come on <nicky@profm.ro> nic YO3GNO

IYou are wrong, it runs on AA alkalines or Nicads, or NiMH, which I use.....no
>AAAs

I was trying to point out that this radio is designed to run on Alkaline AA
batteries (I wasn't sure previously is this was AA or AAA size.)

Of course you can stick in AA size NiCd batteries, but you will need your
own AA NiCd battery charger as Alinco doesn't supply one.

From: frog207lillypads@juno.com (Ed G.)
Subject: FT 846 is definately an FT 847

I'm sorry I started this thread now. I eat my words. I emailed Amateur
Electronic Supply asking them about their add for the FT 846 in their new
catalog (with picture). They responded and said Yaesu contacted them AFTER
they had printed their new catalog. Yaesu said they had CHANGED the number and

that it would be an FT 847.

So, again I appologize for even starting this thread, although it was an
honest mistake, given the photograph of the FT 846.

Ed

There are preamp projects in The Satellite Experimenter's Handbook, The Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book, among other places. There are also suitable designs in *older* ARRL Handbooks. There was recently a MMIC preamp in QST, but that won't have a low enough noise figure to improve on an ordinary receiver at 70 cm. A few suitable preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and Advanced Receiver Research are well known, and make good ones. Expect to pay from $80 to nearly $200 for these, however. One of the few Hamtronics kits worth buying is their helically filtered 70 cm preamp. This is a good unit,
and fairly cheap too. Forget the Ramsey junk.

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>

> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

--------------2428246C390A
Content-Type: text/plain; charset=us-ascii; name="Ft50mods.txt"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="Ft50mods.txt"

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the

Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

```
I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
--------------------------
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
--------------------------
^ Band-Set_Byte (Address 0CE7)
```

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

```
BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*
```

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

```
ARS lost - effect
-----------------
```
The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database?
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any
specific country. That is why the ARS does not work any more, and not?
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen

to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls

are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

>
>Mike, N4PDY

Mike,

the AVC only works on AM, not CW or SSB. Had a 110 for over four years
and no one could get that to work. I recall something in the fine
print on the manual. The '110 does not use a product detector like
upper grade radios do... therefore the AVC is prone to overload from
BFO leakage. I have an HQ-180 and it works fine in that one.

Hi,
I just change my operating system from Windows95 to NT and I have some
problem with the ADMS-1D software. I can upload, create template but I can't
download the frequency to the Yaesu FT-50R. After 60% it says time out
waiting for FT-50R. I've done everything and it still doesn't work. Please
help.
Thanks
Chad

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to
look at a price thats posted, and then make assumptions about it's
fairness, with *no* knowlege whatsoever about the specific items
that is being sold. They feel justified in commenting in some very
negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this example, $15 is what I had to pay for that manual, separate from the R4B, and, I had to look for it for weeks. The fellow that I bought it from answered and inquiry from me about something else, and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer the matching manual with the rig, which, I'm am also selling at my cost, it is just that nice. I would personally prefer to keep the manual for myself, but I figure that a guy that gets a shiney new R4B will enjoy the experience even more with an pristine manual. Bill, if you saw them you'd know, the fellow that bought these two items for $215 will be a friend for life...

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias

correctly!

Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect the radio
to be available in the USA in Mid February 1998. I don't think it has aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380 for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same

IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP
Tuning " in the ausio section.

boundary="------------320E4050252EDDF9CEAA1D07"

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP

Tuning " in the ausio section.

wondering if anyone had any comments/answers on the following:

- Removeable faceplate: It looks like this is not going to be an

option, but I didn't see an "official" stance.

- Dual-band receive (i.e., monitor 2m and 6m call frequencies

simultaneously): Again, nothing "official" that I can find in the

newsgroup.

- 222/1296 capable: Is it possible that either/both of these bands

could be included in the US model as add-ons (or just plain built in)?

- Will this rig do Mode A and Mode K satellite functions (2m up/10m

down or 15m up/10m down)?

- Is the FT-736 being discontinued due to this radio?

Thanks in advance!

Colin, K4SSO

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I

>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because both have their advantages and disadvantages. Nothing wrong with picking up the HT first. Since you mentioned you like hiking (far away from a repeater?) , I would steer or lean toward a radio that has the potential of putting out 5+ watts. This narrows down the field. At 5 watts, then I would see which radio has or can get the larger battery so you have more air time. No fun having a radio with 2-4 hours of battery life between recharges and be on a hike and run out of juice. This again narrows the choices.. Plan on getting an optional antenna cause the rubber duck antenna will work fine in cities but the further away you get, the worse the performance till nothing.. Do you have adequate 70cm repeaters in your area to warrent the dual bander? If not, you can save a bundle of money that could go toward the mobile, by buying a single band radio.. Buy a single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all beginners at one time. I would suggest joining a Ham club in your area and asking the members for their opinion and experiences and they would be glad to show you their radios up close and in person and tell you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and mobiles... Hummmm, not much help am I?? I have a mixture of all four brands if that tells you anything, and each one does something a little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things about both... Like I mentioned above, if you are hiking far away from repeaters, I would want a radio that puts out 5+ watts and have a relatively large battery capacity, with a telescoping antenna... Do these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

>Kirby Davis (KB4UTZ)

Subject: Newbie Question / Mini receiver

Hello,

I_m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can_t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Richard

Hi,
I am looking for a heavy old nonwoking radio for my Son to play with!
Must be clean and safe: Knobs need to have set screws holding them on to
prevent removing and swallowing. He is only 21 months but loves to play
with my
working stuff.
I posted in boatanchor group first.
Thanks,
Jack

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

Subject: FS: 3-Aerotron mobile VHF radios (same freq's) - $175

3-Aerotron radios in VHF-Hi Range. There are 2-2 channel radios
and 1-one channel radio. They all talk to each other on 154.555. The
two freq. radios have a second channel of 154.600. They were working
fine when taken out of service this year. They have the plugs for power
and come with the microphones. $175 + COD shipping for all 3.

Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty)
condition. Said to be in use when the Ham became silent key 6 years ago.
Would restore to new and has spare 3-400 Z tube as well as the one in it.
$450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1
with power supply in separate case that is a bit larger. Have Dow Key
relay box for use with older rigs. I wont say it is working now, but its
obvious that it has and nothing is burned or looks bad. Would consider
trades for newer amps or HF gear, Im just not a collector and already
have an Alpha. Thanks, feel free to inquire about possible trades.

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting
or anything else very serious. It was a nice upgrade for me from a TS-450.
For what I want to do, it is a very nice rig at the right price. I am able
to hear and work a lot more dx with the 920, and 6M is a lot of fun when the
band is open.

Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt transceivers that put out signals in the 10 watt range. Commercial class aircraft use more expensive radios that run on higher electrical system voltages and put out considerably more power. Control towers generally run low
power because the stations they are talking to are all in the local area and a thousand feet or more up in the air. If you want to hear distant towers clearly, you may need to install a directional antenna with a mast-mount preamp.

Hope that helps.

>snip<

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

Subject: Impending HDTV....

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When
that giant rolls over, all the lesser players have to pay attention. Of
particular interest to amateurs, the final bandplan releases the spectrum
currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed
spectrum may be able to relax some of the pressures placed on amateur
VHF/UHF allocations by the little LEOs, and others, desiring new spectrum
below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable
implications with regard to TVI susceptability. That also is of interest
to amateurs. And it isn't all good news because broadcasters will
be sharply reducing power, so over the air TV will become more of
a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation
and coding. But DTV will *not* use the sort of robust FEC which would
make it immune to all types of interference (that would require more
bandwidth for the coding overhead than is available in a 6 MHz channel).
And the 8VSB modulation chosen is also not an ideal choice for operation
in the face of certain types of interference. If DTV is successful in luring
many viewers away from cable, amateurs are bound to face new TVI
challenges.

We may also see the reverse situation, IE DTVs interfering with amateur
equipment. A DTV receiver will be more computer than TV, and we already
know the RFI computers can generate. The sweep rates (and magnitude of
sweep currents) for the large 16:9 HDTV displays will also produce a new
level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be
aware of how we are likely to be affected by these sweeping changes
in the TV broadcast market. And we also have to be aware of who our
new neighbors will be in the newly vacated TV spectrum. There may
be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will
have implications with regard to what will be cost effective for amateurs
to adopt and adapt from it for our own uses. High speed RF modem
technology will be sharply impacted by the mass market DTV receiver.
A new generation of fast and cheap RF modems based on DTV
technology could have a major impact on the sorts of operations
amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current

large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way.
I know that it can be done if one "activates" a jumper. But, there are
two questions: 1 - Where is the jumper? 2 - What are the programming
steps? (I believe that it is similar to programming a scanner, but I have
no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE
reply via e-mail (at least cc me via e-mail) as I do not have access to a
news server that carries this group.

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen
that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL

Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage
HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S
which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who
has any experience with this rig to give me some additional feedback on
it's performance and user satisfaction. Thanks in advance.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

Subject: TM-733 Cross Band Repeat mode ??

Hello,

It seems to be possible to operate the TM-733/E in Cross Band Repeat mode.
In the American (733/A) version it's only a software trick and already
installed from factory (altough not documented in the manual.) :

Cross Band Repeating (source N5LJV)

Cross band repeat isn't documented but comes ready from the factory.
To enable cross band repeat from the front panel, first select a band
by pressing BAND SELECT. Then, change the control to the other band by
hitting [CONT SEL]. Next, press [F] for one second, then the "X" button
(far right side). Decimals will appear between the Kilohertz digits, and
the "ON" indicator will light momentarily. The microphone sequence to
enable cross band repeat while in remote control mode is "DC".

The transmitter hang time can be toggled between 500ms to 0ms by
turning on the radio with [LOW] pressed. They also recommend enabling
the Time-out Timer, for obvious reasons.

Note that the TM-733 can also be used as a "one-way" cross-band repeater.
For example, if you can receive a distant repeater with your HT, but have
difficulty getting into it, you can use the TM-733 to boost your
transmitted
signal. To set this up, just omit the part where you "change the control
to the other band by pressing [CONT SEL]." Doing this will setup the
TM-733
to repeat your signal to the other band, but will not retransmit the
distant
station back to you. If this sounds ambiguous, play around with it a little

and it will begin to make sense.
(SOURCE: N5LJV)

In the European version of the 733/E we have to make a hardware
modification first to get the "X" symbol on the display , and thus to put
the rig in Cross Band Repeat mode !

Who can tell me more about this hardware modification ??

Well my $0.02. I agree. I think that for one the FCC should be either reorganized or aboished to some extent. The I idea of goverment charging rediculous fees to give you the right of broadcasting is unconstitutional. Now I could see them regualting so you don't overpower the airwaves with overmodualtion, and carving out a channel in the airwaves for you to DX on, but the fees should be like $25 flat. That's it. But some of these fees or overwhelming.

Also I think that the conglomerates should have to give up the stranglehold on AM/FM/TV stations. In the DC/Baltimore metro area (where I used to live) 4 or 5 companies owned 95% of all the stations. Therefore making them "cookie cutter" stations of the same blandness. If it went back to it essentials, independently owend w/ REAL DJ's (not randomly computer generated tracks). I worked for 98.1 WJJR in Rutland, VT. I wanted to do a slow jam show to compete in the late nite market. They said no because the only "live show" was the morning show. Everything else was controlled by the computer. How lame. Their should be a law against it.

Oh well, I didn't mean to blabber on and on, but I just feel very strong about the subject. This is why I want to put up a Urban Contemporary station in my area (Champlain Valley of NY/VT) since there is no such format in the area. Maybee put a little spice into the blandness. But I don't want to pay hundreds and thousands of dollars getting a liscense.

OK, so I want to run it on NiCads (the manual says you have to
buy NiCads "at user's risk" :@). WHERE'S THE CHARGER?
I see there's a pair of (what looks like) charging terminals
on the bottom .. what are these for (other than for burning your
own radio)?

Get 3 NiMH 1300mahr batteries from TechAmerica when you buy the radio. They also have a separate Eveready Battery Charger for $7.99 which will charge the batteries extrenally, just fine and you won't risk harming your radio

I personally, would recommend the ft470 from Yaesu. it is a compact
transceiver that allows keypad entry so you don't have to use the manual
tuning dial. YOu may also hook it up to a power supply so you don't have
to constantly recharge the battery.
In addition, you can hook it up to a telescopic antenna so you can extend
your range and still maintain portability.
There are sevral choices of vertical antennas you can choose if you want
to build a base station.
I hope this helps.

Just what do you think gives you that right? Another one of the current
generation that thinks everthing is "their right". Sorry, it dosen't
work that way, most things are not you right, but a privilege that must
be earned.

I feel the IC-746 Scope will be very much like the IC-756 except the
Scope will be faster
and have less resolution than the IC-756. I feel the Ic-746 will NOT BE
like the IC-706 MK II scope which is practically useless (a toy). Before
I decide which radio to buy(FT-847 or IC-746) I will put both radios
through the paces at the Local Ham Store.

There is an evaluation of this radio in a very recent QST, which compares
many. It says that the rig kind of grows on you.

I just received mine (440 version) a couple of days ago, and find its
controls to have been designed by the insane. And, as the article points
out, the manual is non-existent.

Also, if I am correct, it is not functioning correctly because the voltage
is dropping; yet the low-battery signal does not appear; in some sense, it
should not, because even under load I am still above the 3.6 volts which
the printout seems to allow. That voltage loss occurs much too soon after
I insert fully charged nicads.

I ordered the cigar-lighter power cord, which would sustain the voltage
better, but that item is back-ordered.

(So, any customers, before I return it?)

Subject: IC706

I would like to connect my home made antenna tuner to the IC706 and get
it working via the "tuner/call" button. Does anyone know the
specifications for the Accessory connector or the connector for AH-3?
How does the IC706 detect that a tuner is connected?
The manual is not very useful.

[my net address deleted because of spam]

Dear Mr. xxxxxx:

Thank you very much for your e-mail, dated November 26, 1997, requesting information on the FT-847.

Unfortunately, there is no English brochure available on the FT-847 yet, but one is expected shortly.

For your convenience, we invite you to contact our subsidiary, YAESU USA, at the following address. You will be able to obtain a brochure directly from them, once they become available. As well, they will be happy to help you with any concern or question that you may have.

YAESU USA

There are preamp projects in The Satellite Experimenter's Handbook, The
Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book,
among other places. There are also suitable designs in *older* ARRL Handbooks.
There was recently a MMIC preamp in QST, but that won't have a low enough
noise figure to improve on an ordinary receiver at 70 cm. A few suitable
preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers
circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and
Advanced Receiver Research are well known, and make good ones. Expect
to pay from $80 to nearly $200 for these, however. One of the few Hamtronics
kits worth buying is their helically filtered 70 cm preamp. This is a good
unit,
and fairly cheap too. Forget the Ramsey junk.

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant

carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side

brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

From: David Shenton <tabone@g-net.net>
Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

I think this is the link that you will be most interested in:
http://www.glatmos.com/products/data/thunder.html

I have a friend who manages the transmission and distribution power
grid for a large electric power company. He took me to the Control
Center one night during a thunderstorm, and showed me the lightning

detection system. Very impressive. The screen looked very similar to
the screen shot on this webpage.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>
> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
....
This is the Byte that tells the current Status (Hardware configuration) of

the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.

- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
---
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
---
^ Band-Set_Byte (Address 0CE7)

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database?
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any
specific country. That is why the ARS does not work any more, and not?
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

From: sca00135@mail.wvnet.EDU (Sam Hall)
Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with
requests for information. I have operated the 505 for a couple months and
offer the following as my initial impressions. I have been somewhat
hesitant reporting on the 505 as I don't want to mislead anyone about the
rig. Please accept the following for what it is and nothing more.
Remember, one man's trash is another man's treasure, what I like or
dislike may be totally different from another perspective. I bought the
505 primarily to remote control at a site 7 miles from my home. I am told
the telephone modem will be available after the first of 1998 and can't
wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any
sophisticated test equipment (only my eyes and ears) , my total operation
time amounts to about 10 hours involving DX, casual contesting and rag
chew. I operate about 90% CW and 10% SSB. When possible I tried to
compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very
good HF Transceiver. The look, feel and operation is "different", not
necessarily better or worse than top of the line YaWoodCom's, but

subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

I found a good page for the Yaesu FT-920, anyone got a good site for the
TS-870, which I just ordered from AES? Would like to get any comments/feedback
from people who have the radio.

>
>Mike, N4PDY

Mike,

the AVC only works on AM, not CW or SSB. Had a 110 for over four years
and no one could get that to work. I recall something in the fine
print on the manual. The '110 does not use a product detector like
upper grade radios do... therefore the AVC is prone to overload from
BFO leakage. I have an HQ-180 and it works fine in that one.

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to
look at a price thats posted, and then make assumptions about it's
fairness, with *no* knowlege whatsoever about the specific items
that is being sold. They feel justified in commenting in some very
negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this
example, $15 is what I had to pay for that manual, separate from
the R4B, and, I had to look for it for weeks. The fellow that I

bought it from answered and inquiry from me about something else,
and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer
the matching manual with the rig, which, I'm am also selling at my
cost, it is just that nice. I would personally prefer to keep the
manual for myself, but I figure that a guy that gets a shiney new
R4B will enjoy the experience even more with an
pristine manual. Bill, if you saw them you'd know, the fellow that
bought these two items for $215 will be a friend for life...

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias

correctly!

Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect the radio
to be available in the USA in Mid February 1998. I don't think it has aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380 for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same

IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP
Tuning " in the ausio section.

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP

Tuning " in the ausio section.

>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because both have their advantages and disadvantages. Nothing wrong with picking up the HT first. Since you mentioned you like hiking (far away from a repeater?) , I would steer or lean toward a radio that has the potential of putting out 5+ watts. This narrows down the field. At 5 watts, then I would see which radio has or can get the larger battery so you have more air time. No fun having a radio with 2-4 hours of battery life between recharges and be on a hike and run out of juice. This again narrows the choices.. Plan on getting an optional antenna cause the rubber duck antenna will work fine in cities but the further away you get, the worse the performance till nothing.. Do you have adequate 70cm repeaters in your area to warrent the dual bander? If not, you can save a bundle of money that could go toward the mobile, by buying a single band radio.. Buy a single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all beginners at one time. I would suggest joining a Ham club in your area and asking the members for their opinion and experiences and they would be glad to show you their radios up close and in person and tell you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and mobiles... Hummmm, not much help am I?? I have a mixture of all four brands if that tells you anything, and each one does something a little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things about both... Like I mentioned above, if you are hiking far away from repeaters, I would want a radio that puts out 5+ watts and have a relatively large battery capacity, with a telescoping antenna... Do these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

Subject: Surge supressor for breaker box?

I understand that there is a surge supressor available that is installed at
your homes breaker box. Does anyone out there know where I can get one of
these? I am going to have my house rewired soon and wnat to have one installed
at the
same time. Any info on this will be greatly appreciated.

Subject: Newbie Question / Mini receiver

Hello,

I_m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can_t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Richard

Hi,
I am looking for a heavy old nonwoking radio for my Son to play with!
Must be clean and safe: Knobs need to have set screws holding them on to
prevent removing and swallowing. He is only 21 months but loves to play
with my
working stuff.
I posted in boatanchor group first.
Thanks,
Jack

Date: 3 Dec 1997 04:44:59 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Much less than most folks think... Generally <50 watts.

> It just dawned on me when I was monitoring the airband, and I received

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

I also heard that Yaesu made the 8100 harder to modify. Not sure
about this though. I have an 8100 and there don't seem to be any mods
other than the MARS/CAP available.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've
seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

From: Phil Wheeler
Subject: QRP rig OHR100 vs. Norcal 40a

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good to deal with.

Phil

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty)
condition. Said to be in use when the Ham became silent key 6 years ago.
Would restore to new and has spare 3-400 Z tube as well as the one in it.
$450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1
with power supply in separate case that is a bit larger. Have Dow Key
relay box for use with older rigs. I wont say it is working now, but its
obvious that it has and nothing is burned or looks bad. Would consider
trades for newer amps or HF gear, Im just not a collector and already
have an Alpha. Thanks, feel free to inquire about possible trades.

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting
or anything else very serious. It was a nice upgrade for me from a TS-450.
For what I want to do, it is a very nice rig at the right price. I am able
to hear and work a lot more dx with the 920, and 6M is a lot of fun when the
band is open.

Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt
transceivers that put out signals in the 10 watt range. Commercial class
aircraft use more expensive radios that run on higher electrical system
voltages and put out considerably more power. Control towers generally run
low
power because the stations they are talking to are all in the local area and a
thousand feet or more up in the air. If you want to hear distant towers
clearly, you may need to install a directional antenna with a mast-mount
preamp.

Hope that helps.

>snip<

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

Subject: Impending HDTV....

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When that giant rolls over, all the lesser players have to pay attention. Of particular interest to amateurs, the final bandplan releases the spectrum currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed spectrum may be able to relax some of the pressures placed on amateur VHF/UHF allocations by the little LEOs, and others, desiring new spectrum below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable implications with regard to TVI susceptability. That also is of interest to amateurs. And it isn't all good news because broadcasters will be sharply reducing power, so over the air TV will become more of a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation and coding. But DTV will *not* use the sort of robust FEC which would make it immune to all types of interference (that would require more

bandwidth for the coding overhead than is available in a 6 MHz channel). And the 8VSB modulation chosen is also not an ideal choice for operation in the face of certain types of interference. If DTV is successful in luring many viewers away from cable, amateurs are bound to face new TVI challenges.

We may also see the reverse situation, IE DTVs interfering with amateur equipment. A DTV receiver will be more computer than TV, and we already know the RFI computers can generate. The sweep rates (and magnitude of sweep currents) for the large 16:9 HDTV displays will also produce a new level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be aware of how we are likely to be affected by these sweeping changes in the TV broadcast market. And we also have to be aware of who our new neighbors will be in the newly vacated TV spectrum. There may be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will have implications with regard to what will be cost effective for amateurs to adopt and adapt from it for our own uses. High speed RF modem technology will be sharply impacted by the mass market DTV receiver. A new generation of fast and cheap RF modems based on DTV technology could have a major impact on the sorts of operations amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current
large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

Tel 65-536-3559

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen

that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL

--------------54DA3C953D9A
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage
HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S

which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who has any experience with this rig to give me some additional feedback on it's performance and user satisfaction. Thanks in advance.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

My first real kit was a NorCal 40a. I had a few building problems of my own. I called the compamy up, after working with a local ham, and he tried to talk me through the problem. I had a bad solder joint, and we got it all fixed up.

Over all, very satified and would recommend Wilderness Radio to any one.

Brian, kf4frp

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to
look at a price thats posted, and then make assumptions about it's
fairness, with *no* knowlege whatsoever about the specific items
that is being sold. They feel justified in commenting in some very
negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this
example, $15 is what I had to pay for that manual, separate from
the R4B, and, I had to look for it for weeks. The fellow that I
bought it from answered and inquiry from me about something else,
and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer
the matching manual with the rig, which, I'm am also selling at my
cost, it is just that nice. I would personally prefer to keep the
manual for myself, but I figure that a guy that gets a shiney new
R4B will enjoy the experience even more with an
pristine manual. Bill, if you saw them you'd know, the fellow that
bought these two items for $215 will be a friend for life...

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias
correctly!

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect the radio
to be available in the USA in Mid February 1998. I don't think it has aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380 for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe that the FT-736
Satallite radio will be discontinued as soon as this radio hits the store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP
Tuning " in the ausio section.

boundary="------------320E4050252EDDF9CEAA1D07"

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this
scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP

Tuning " in the ausio section.

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4
hours of battery life between recharges and be on a hike and run out
of juice. This again narrows the choices.. Plan on getting an
optional antenna cause the rubber duck antenna will work fine in
cities but the further away you get, the worse the performance till
nothing.. Do you have adequate 70cm repeaters in your area to
warrent the dual bander? If not, you can save a bundle of money that
could go toward the mobile, by buying a single band radio.. Buy a
single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all
beginners at one time. I would suggest joining a Ham club in your
area and asking the members for their opinion and experiences and they
would be glad to show you their radios up close and in person and tell
you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and
mobiles... Hummmm, not much help am I?? I have a mixture of all four
brands if that tells you anything, and each one does something a
little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things
about both... Like I mentioned above, if you are hiking far away from
repeaters, I would want a radio that puts out 5+ watts and have a
relatively large battery capacity, with a telescoping antenna... Do
these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

Subject: Surge supressor for breaker box?

I understand that there is a surge supressor available that is installed at
your homes breaker box. Does anyone out there know where I can get one of
these? I am going to have my house rewired soon and wnat to have one installed
at the
same time. Any info on this will be greatly appreciated.

Subject: Newbie Question / Mini receiver

Hello,

I_m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can_t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Richard

Hi,
I am looking for a heavy old nonwoking radio for my Son to play with!
Must be clean and safe: Knobs need to have set screws holding them on to
prevent removing and swallowing. He is only 21 months but loves to play
with my
working stuff.
I posted in boatanchor group first.
Thanks,
Jack

There are preamp projects in The Satellite Experimenter's Handbook, The
Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book,
among other places. There are also suitable designs in *older* ARRL Handbooks.
There was recently a MMIC preamp in QST, but that won't have a low enough
noise figure to improve on an ordinary receiver at 70 cm. A few suitable
preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers
circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and
Advanced Receiver Research are well known, and make good ones. Expect
to pay from $80 to nearly $200 for these, however. One of the few Hamtronics
kits worth buying is their helically filtered 70 cm preamp. This is a good
unit,
and fairly cheap too. Forget the Ramsey junk.

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.

6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>
> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

--------------2428246C390A
Content-Type: text/plain; charset=us-ascii; name="Ft50mods.txt"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="Ft50mods.txt"

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==========
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in

> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)

- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
---
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I

---
^ Band-Set_Byte (Address 0CE7)

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database?
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any

specific country. That is why the ARS does not work any more, and not?
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue.

I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

>
>Mike, N4PDY

Mike,

the AVC only works on AM, not CW or SSB. Had a 110 for over four years
and no one could get that to work. I recall something in the fine
print on the manual. The '110 does not use a product detector like
upper grade radios do... therefore the AVC is prone to overload from
BFO leakage. I have an HQ-180 and it works fine in that one.

Subject: 2-meter transciever question

One of the best buys is the Alinco DR 140T. It is a bare bones transceiver
which works well. Kenwood is also marketing one for around $250 as is ICOM
with their IC-2000.

Date: 3 Dec 1997 04:44:59 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've
seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

From: Phil Wheeler
Subject: QRP rig OHR100 vs. Norcal 40a

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the
NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely
draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since
I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good
to deal with.

Phil

>specifications for the Accessory connector or the connector for AH-3?
>How does the IC706 detect that a tuner is connected?
>The manual is not very useful.
>
>Arne
>
>SM6VR
>

Arne,

I asked this same question of the newsgroup and got this reply:

Subj: IC-706 AH-3 connector
Date: 97-11-04 04:51:33 EST
From: jtn@te-cats.COM (John T. Nogatch)
To: jdonimi@aol.com

I investigated the AH-3 connector on the IC-706 so I could
make the TUNE button do something useful without an Icom tuner.
Eventually, I came up with a small circuit which plugs into
the AH-3 connection, and fools the IC-706 into thinking
there's a tuner connected. The TUNE button now puts it
into 10w CW keydown mode until pressed a second time,
regardless of the mode setting. I find this a great convenience.

The 4 pins are:
. ground

. 12v fused for 0.5a (?)

. TSTRT normally high, this pin pulses low twice when the
TUNE button is pressed, telling the tuner to start or stop.

. TKEY normally low if no tuner connected, in which case the
TUNE button is non-functional.
TKEY normally high is tuner is connected. After receiving the
TSTRT signal, the tuner may assert TKEY low to key the transmitter.

I don't remember which pin is which. After I got this circuit working,
I concentrated on making QSOs.

Note that the AH-3 connector doesn't work on 6m.

I have a Drake dream station for sale. TR-7 with NB,Fan,CW and SSB
filters,PS-7,SP-75 speech processor,MS-7 speaker,7077 Mic,R-7 receiver
that will xcv with TR-7. R-7 has NB,CW,SSB,AM filters, all cables. I
also have service kit with extender boards, tuning tools, and service
manuals on all. Everything is like new and works great. I really don't
need all this, but hate to break up. Will sell all for $1650 plus
shipping. This is a rare and complete station. Also have a MN-7 tuner
to match for another $150. 505-437-8658 or email.

Date: Tue, 02 Dec 1997 23:32:05 -0800
From: Ron Castro
Subject: FT-50R ARS Probs Fix!

Like many who hardware-modified their Yeasu FT-50R's for MARS/CAP xmit,
I noticed that my Automatic Repeater Shift (ARS) function had defaulted
to the European band plan, rendering it useless for US repeater
operations. I use the ADMS 1C programmer (v 1.04), but neglected to
save a template of the origional USA configuration. Even if I had, I
understand that making the hardware mod makes the file unusable.

Good news! Despite reports that the ARS function is "hosed" after the mod, it CAN be restored! To find out how, check out the FT-50R homepage at:
www.members.aol.com/aeimn/ft50/articles.txt
Look near the end for the Ingra-Beton article. The article shows how to use a hex-editor to change the .TPL file (although it works on .RDF files as well) to restore the functions, while retaining MARS/CAP xmit capability. I found that only ONE BYTE needed to be changed in my file to fix the problem, and although I have never edited a hex file before, it worked right away! Any hex editor can be used...I used XTREE Gold, but there are dozens of others out there, including the unfreindly DOS debug. Please read the disclaimers in the article.

One tip...read the article VERY carefully, make sure you FULLY understand it before proceeding, and if you are squemish about hex editing, talk to someone who knows about it to make sure you find the right addresses in your file the article refers to. Save a file that you know works with your radio as a back-up!

Three cheers for "Indi" for solving a problem that has stumped FT-50R users for a long time!

> Gary Coffman KE4ZV | You make it |mail to ke4zv@bellsouth.net
> 534 Shannon Way | We break it |
> Lawrenceville, GA | Guaranteed |
>

Hi Gary,
I agree with all your comments. On our local repeater, I was one of the people who very much wanted CTCSS to be retrofitted to the unit, so became involved in making it happen.

We are required, on 2m. repeaters, by our licence to have 1750Hz access. However, we can have CTCSS also. We have OR'd the two access modes, as you have mentioned and this gives all users an opportunity to access. CTCSS is far better, as in our application, the decoder module has a much smaller bandwidth than that required for use with 1750Hz (+/-25Hz over here for 1750) and thus an improved signal to noise ratio for detecting the access tone.
When CTCSS is detected, the squelch on the repeater is effectively off and mobile signals will 'swish' up and down rather then chop out and in with mobile flutter. The same applies in reverse on the amateurs rx.

The repeater does not generate CTCSS when giving its identification in beacon mode. Therefore with a decoder on the amateurs rx, they do not have to listen to the beacon. They only hear the repeater when someone access' it.

I appreciate that you will understand this, but these are the enhancements I was meaning in my first reply, that the average user see's as No Value

Add. They need to be convinced (not me Yves). In UK terms they ARE enhancements, but until people have seen/heard the benefits of CTCSS it is very hard to get them to understand the benefits.

Alan G.

Subject: What is the deal - Kachina 505DSP? Junk or what???

This is really kind of funny. I performed a search of all the archived news postings from this group on the Kachina 505, and of the 30 or so postings, 90%

of them where from folks begging for a review. I saw guys claim to have purchased 505's, offer side by side comparisons between the 505 and a FT1000MP

for instance, but they never produce crap. What gives? Is this rig such a piece of crap that no one want to discuss it, or better yet, compare it to anything? I've never seen a subject so avoided in my life. What gives Kachina owners? Don't want to discuss it? Waste of money? Greatest rig ever

made? Quiet, noisy, hard to use, easy to use, IF DSP suck, kicks butt, what? Blows the 1000MP away, can't touch the 870, makes the 756 look like a toy, can't even touch the audio dsp of the 920, what???????? Sorry to rant and rave, but I have 2k burning a hole in my back pocket, want to buy a new HF rig, but just can't decide, and certianly don't want to rule out a potential killer rig like the Kachina 505DSP! Thanks for listening, 73, Mike... WQ0N

Subject: 847 cost???

QST usually reviews a radio after it is in the market for 4-6 months. I
think the reason is to give the manufacturer a chance to correct
mistakes. MFj complained that the TNC 1278 go a bad review since it was
the first batch off the assembly line(trust me it wouldn't
have made a difference if it was 6 months later. Hee hee). If Both the
Icom IC-746 and
Yaesu FT-847 come out in February/March 1998 I would expect both to be
reviewed
by the Fall of 1998.

From: w5kft@nts-online.net (Bryan Edwards)
Subject: Alinco $88 handhelds

I called last Wednesday and ordered $88 UHF model by phone. It was
delivered on Monday, not bad considering no UPS deliveries on Thursday
and Friday. Also, the $88 included prepaid shipping. Where can you
beat a deal like that?? It is a great little radio, works great
keying our 443.450 repeater that is about 12-15 miles away (as long as
I am outside the steel roofed office building). Come on guys, give it
a break, its an $88 radio.

From: m_white@juno.com (Michael White)
Subject: FS: Vibroplex Iambic Deluxe paddles, plus matching keyer control panel

For sale: Vibroplex Iambic Deluxe paddles. All chrome parts and base with red finger paddles. In mint condition; entirely as new.

Includes an accessory panel for controlling a keyer. This is a small box that attaches on the side by means of existing screws on the bottom of the paddle; no modifications. The box has 4 small pushbuttons for controlling various functions of a keyer; you wire it up as needed. The box is very nicely chromed

and matches the paddle base exactly. The pushbuttons are red, matching the finger paddles.

I also have a very nice plastic cover for the paddle that I'll include. It has

my callsign neatly engraved in it, so you'll never forget who you bought it from :-)

$95 shipped UPS anywhere in the lower 48 states. Email if interested. Thanks.

Mike, N4PDY

If you can operate a screwdriver it is fairly easy. The procedure must
be followed exactly though to avoid a repeat of the problem. I will
e-mail it tomorrow when I get to the shop..

To mod the ic 32 for extended receive, just type in F-set until the
screen says PLACE, then set PLACE at 100, and that's it. Your
extended receive will work. try it!

YEASU FT920 TX OUT OF BAND

With the radio off, press[STEP] and [LOCK] (under VFO-A) and hold
these two keys in while you turn the raido on. Now release the two
keys.
Enter the following password: 0761161, then press [ENT].
Press [MENU],Rotate VFO B though the "U" settings till you get to the
"F" Menu (F-01 F-35).

TUNE to "F-35 your Display will say "DESTINA" PRESS ENTER
AND SELECT "OUTSIDE",Using VFO B.that is all there is to it!!!
THIS WILL LET YOU TX 1.8 TO 54MHZ,TO UNDO THE MOD SIMPLY SELECT F-35,
AND PUT IT BACK TO "USA"

The only other adjustments that are of any use is F-09 AM modultation.

After adjustments are made, Press [MENU] to save the new setting and,
exit to normal operation.

WARNING ANY OTHER ADJUSTMENT CAN AND WILL DEGRADE THE RADIO'S
PERFORMANCE.
I CANNOT BE RESPONSABLE FOR YOUR ACTIONS...

551. IC-746 Spectrum Scope Thoughts/Comments

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-06 00:00:00 UTC
From: Michael Aust <maust21401@earthlink.net>
Message-ID: <348A383A.68AD@earthlink.net>
Source record: 159913

The IC-746 is on the back cover of the AES catalog, it
really looks like the 706Mark II, but with tuner built in,
DSP, and a 100watt amp for 2meters, which is really that they
extened the hf to 6mtr PA to now to go from Hf to 2mtrs.

I think Icom would like to led you believe the Spectrun Scope
is real time(meanining you can watch the Spectrum Scope at the same
time while listening to the radio (exacly like the IC-756 or IC-781).
I seriously doubt that is the case.

To at the same time, in order to do this, they need two VCO's ,
one for listening, one for the scope.

The Spectrum Scope sweep is probably the same sweep speed as in
the IC-706 Mark II.

The 706 Mark II and IC-746 sweep is faster, than the IC-756, but
I think it is not a fair statement, since the IC-781 scope is near
real time, while the Ic-756 is a near second.

The Spectrum Scope is no Hewlett Packard Spectrum Analyzer, but
a handy gadget to see band activity.

Any other thought welcome.

73

Mike

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to look at a price thats posted, and then make assumptions about it's fairness, with *no* knowlege whatsoever about the specific items that is being sold. They feel justified in commenting in some very negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this example, $15 is what I had to pay for that manual, separate from the R4B, and, I had to look for it for weeks. The fellow that I bought it from answered and inquiry from me about something else, and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer the matching manual with the rig, which, I'm am also selling at my cost, it is just that nice. I would personally prefer to keep the manual for myself, but I figure that a guy that gets a shiney new R4B will enjoy the experience even more with an pristine manual. Bill, if you saw them you'd know, the fellow that bought these two items for $215 will be a friend for life...

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias
correctly!

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect the radio
to be available in the USA in Mid February 1998. I don't think it has aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380 for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe that the FT-736
Satallite radio will be discontinued as soon as this radio hits the store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP
Tuning " in the ausio section.

boundary="------------320E4050252EDDF9CEAA1D07"

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45 KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe that the FT-736

Satallite radio will be discontinued as soon as this radio hits the store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF and then "SLOPE DSP

Tuning " in the ausio section.

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4
hours of battery life between recharges and be on a hike and run out
of juice. This again narrows the choices.. Plan on getting an
optional antenna cause the rubber duck antenna will work fine in
cities but the further away you get, the worse the performance till
nothing.. Do you have adequate 70cm repeaters in your area to
warrent the dual bander? If not, you can save a bundle of money that
could go toward the mobile, by buying a single band radio.. Buy a
single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all
beginners at one time. I would suggest joining a Ham club in your
area and asking the members for their opinion and experiences and they
would be glad to show you their radios up close and in person and tell
you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and
mobiles... Hummmm, not much help am I?? I have a mixture of all four
brands if that tells you anything, and each one does something a
little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros

>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things
about both... Like I mentioned above, if you are hiking far away from
repeaters, I would want a radio that puts out 5+ watts and have a
relatively large battery capacity, with a telescoping antenna... Do
these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

Subject: Newbie Question / Mini receiver

Hello,

I_m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can_t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Subject: Looking for heavy old nonworking radio.

Hi,
I am looking for a heavy old nonwoking radio for my Son to play with!
Must be clean and safe: Knobs need to have set screws holding them on to
prevent removing and swallowing. He is only 21 months but loves to play
with my
working stuff.
I posted in boatanchor group first.
Thanks,
Jack

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting or anything else very serious. It was a nice upgrade for me from a TS-450. For what I want to do, it is a very nice rig at the right price. I am able to hear and work a lot more dx with the 920, and 6M is a lot of fun when the band is open.

From: k1bqt@aol.com (K1BQT)
Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt transceivers that put out signals in the 10 watt range. Commercial class aircraft use more expensive radios that run on higher electrical system voltages and put out considerably more power. Control towers generally run low
power because the stations they are talking to are all in the local area and a thousand feet or more up in the air. If you want to hear distant towers clearly, you may need to install a directional antenna with a mast-mount preamp.

Hope that helps.

>snip<

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained.
Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

Dick W0EX

Subject: Impending HDTV....

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When
that giant rolls over, all the lesser players have to pay attention. Of
particular interest to amateurs, the final bandplan releases the spectrum
currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed
spectrum may be able to relax some of the pressures placed on amateur
VHF/UHF allocations by the little LEOs, and others, desiring new spectrum
below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable
implications with regard to TVI susceptability. That also is of interest
to amateurs. And it isn't all good news because broadcasters will
be sharply reducing power, so over the air TV will become more of
a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation
and coding. But DTV will *not* use the sort of robust FEC which would
make it immune to all types of interference (that would require more
bandwidth for the coding overhead than is available in a 6 MHz channel).
And the 8VSB modulation chosen is also not an ideal choice for operation
in the face of certain types of interference. If DTV is successful in luring
many viewers away from cable, amateurs are bound to face new TVI
challenges.

We may also see the reverse situation, IE DTVs interfering with amateur
equipment. A DTV receiver will be more computer than TV, and we already
know the RFI computers can generate. The sweep rates (and magnitude of
sweep currents) for the large 16:9 HDTV displays will also produce a new
level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be
aware of how we are likely to be affected by these sweeping changes
in the TV broadcast market. And we also have to be aware of who our
new neighbors will be in the newly vacated TV spectrum. There may
be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will
have implications with regard to what will be cost effective for amateurs
to adopt and adapt from it for our own uses. High speed RF modem
technology will be sharply impacted by the mass market DTV receiver.
A new generation of fast and cheap RF modems based on DTV
technology could have a major impact on the sorts of operations
amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current

large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way.
I know that it can be done if one "activates" a jumper. But, there are
two questions: 1 - Where is the jumper? 2 - What are the programming
steps? (I believe that it is similar to programming a scanner, but I have
no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE
reply via e-mail (at least cc me via e-mail) as I do not have access to a
news server that carries this group.

Thanks,
Richard

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen
that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL
REPORT : INTRODUCTION TO THE FINANCIAL MARKETS & TRADING OPPORTUNITIES IN COMMODITY, CURRENCY & FINANCIAL FUTURES. (Available on request)

A little bit of Information on Phillip GNI Futures, Is a founding clearing member of Singapore International Monetary Exchange (http://www.simex.com) and

the futures arm of Phillip Securities PL, one of the major stock broking company in Sin
gapore
(http://www.phillipsecurities.com).

Established since 1983, Phillip Futures PL name now has been changed to Phillip GNI Futures PL, as Gerrard & National Inter Commodities PL (http://www.gni.co.uk) an SFA regulated broker, seek Phillip Futures for the Execution of Asian Stock
Index and other futures contracts.

Phillip GNI Futures offer you their services in

*STOCK INDEX : Nikkei 225, MSCI Taiwan Stock Index, Kuala Lumpur Composite Index, Hang Seng Stock Index
(Recommended at present), Standard & Poor 500, FTSE 100, NYSE Composite index. DJIA

CURRENCIES : Australian $, British Pound, Canadian $, DeutscheMark, Japanese Yen, Swiss Franc, French-Franc, New Zealand Dollar. (Coming up Singapore dollars & Malaysian Ringgit) Currency Crosses.

METALS : Aluminum, Copper, Gold, Silver, Palladium, Platinum.

INTEREST RATES : T-Bond, T-Bills, Euro-Dollar, Euro-Yen, Euro-DM, Japanese Gov't Bond, KLIBOR, German- Bunds, Italian Gov't Bond, Long Gilts, Short Sterling.

Oil : Crude Oil, Heating oil #2, Natural gas, Crude Palm oil, Brent Crude oil.

AGRICULTURES : Corn, Soybeans, Soybeans oil, Soybean meal, Oats, Wheat, Live Cattle, Lean Hogs, Feeder- Cattle, Lumber,
Pork Bellies, Cotton, Orange Juice, Cocoa, Sugar #11.

(Please note that all trading done with us is on a non-discretionary basis, which means all transactions done are only authorized by you, we don't offer managed Accounts as yet, and there is risk of loss in trading futures)

Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below). Would make an excellent portable backup, emergency or packet radio. The radio is in working condition, however, I do not have the antenna, charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and 147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the Amateur radio spectrum that I wish that there would be more testing that required code. GO CODE, GO CODE Onward and most of all upward learn it or stay on the frequencies that are more appropriate for you so that you can't propagate bad and poorly referenced information about code. Fortunately anyone that has done the code and is on the H.F. frequencies never complains about learning it, they may not use it but they don't complain. Notice the people who complain about it have to do it on the internet because the frequencies that they use won't get the job done otherwise, as for their belly-aching and complaining mentality so what, learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage
HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S
which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who
has any experience with this rig to give me some additional feedback on
it's performance and user satisfaction. Thanks in advance.

From: David Rogers <drogers0@mailexcite.com>
Subject: Seeking: 2-Meter and 440Mhz HT

If any one can offer me a Handheld Ham Radio that works at 2-Meters or
440-Mhz, I prefer a Radio Shack but all solid equipment is good.
I'm also looking for a set of Ham Radios that work at 1300-Mhz, for Data
Packet.

Thanks, E-Mail me if you have any information or suggestions.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

Three months old and absolutely as BRAND NEW> Package includes:

FT-50RD w/5 Watt FNB-41 Battery (still in package). Latest model out.
Extra FNB-41 5 Watt Battery (still in package)
Extra FNB-40 2 Watt Battery (the one I use with radio)
Maha MH-101-Y3 Deskton Drop-in Rapid Charger
CN-3 BNC to SMA adaptor

All accessories (usused) and packaging, warranty card, etc. The 2 FNB-41's are still in the box and un-used. Radio has been used for monitoring in the house only. Condition is GUARANTEED "as new". Will ship all for $400. I just don't have any interest in VHF?UHF anymore. Contact Van, W0NZV.

From: abtownes@hotmail.com
Message-ID: <881435905.16491@dejanews.com>
Source record: 159917

I believe there is no such thing as a factory-fresh
data file. You create data files from ADMS software
and upload them to the radio along with the template
file. You cannot download a data file. You do
download the template file. Template files
are not modifiable with ADMS software, but are with
a hex editor. You must save the datafile you uploaded
to use it again. Uploading a datafile while associating
it with a modified template file can cause trouble.
This is solvable though, following postings by
Ingra-Beton and others here. I takes a little more
editing of the template file.

if you goto your local radio shack you can still get the service manual
for it. wich has the standard user manual in it.

Subject: 2-meter transciever question

One of the best buys is the Alinco DR 140T. It is a bare bones transceiver
which works well. Kenwood is also marketing one for around $250 as is ICOM
with their IC-2000.
73's...Dick, K7RNZ

Date: 3 Dec 1997 04:44:59 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've
seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

Ed,

Please check out this page :

http://www.yaesu.com/ft847.html

And let us know if you still believe it's an '846.

73,

Mark

N4EOC

Germantown, MD

P.S.

Could there be 2 new rigs coming out? The '847 is the only
one discussed on the Yaesu site...

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

Subject: Help request for ICOM IC-T7a modes

I have problem with my radio, I can not to reach DTMF speed.
My speed is from 500 - 100 ms, but I need speed at least 50 Ms.
If you have solution for my problem send me on E-mail nedelja@eunet.yu,
or on news. Also if you have some other modification I will be
grateful for every information. I can send this one:

Subject: RE: Icom IC-T7A Mods?
In article 05101dcc@gfiber.halcyon.com, Gary P. Fiber
writes:
Hold the Moni and band buttons while powering up the radio, wiat for at
least 5 seconds before you release these buttons. Then press the band
button and see what happens. You will be pleased.
Gary
It has also been said that if you remove D15 on the logic board that
tx at 420 is possible

From: Phil Wheeler
Subject: QRP rig OHR100 vs. Norcal 40a

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the
NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely
draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since
I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good
to deal with.

Phil

Hello Corey,
I sure would like to know the version number of the CPU in that radio
and the serial number......
The mod does not work in 3 radios I have tried here. Beyond that,
Destina is displayed on F-33 not F-35.

There are preamp projects in The Satellite Experimenter's Handbook, The
Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book,
among other places. There are also suitable designs in *older* ARRL Handbooks.
There was recently a MMIC preamp in QST, but that won't have a low enough
noise figure to improve on an ordinary receiver at 70 cm. A few suitable
preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers
circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and
Advanced Receiver Research are well known, and make good ones. Expect
to pay from $80 to nearly $200 for these, however. One of the few Hamtronics
kits worth buying is their helically filtered 70 cm preamp. This is a good
unit,
and fairly cheap too. Forget the Ramsey junk.

Subject: FS: DSI 5612 Freq. counter (Digimax)

For Sale:

DSI Instruments - 5612 Frequency Counter (DSI is now Digimax):

- 9-digit display (7-seg. LED)
- Stable OCXO (Oven controlled crystal oscillator)
- Sensitivity adjustment with panel mounted potentiometer (knob adjust)
- Prescaler enable/disable
- Dual input -
Input 1 - 50Mhz to 1.2Ghz (1Hz to 1kHz resolution)
Input 2 - 50Hz to 50Mhz (0.1Hz to 10Hz resolution)
- External wall transformer supply, carry handle, made in USA.
- Prescaler circuit is improved for excellent 1.2Ghz sensitivity.

- In excellent electrical and mechanical condition, tested to 1.3 Ghz at

about 30mV sensitivity.

$110.00, you pay shipping. (with manual)

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.
3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be
seen in it's holder---most likely a black plastic holder. Replace the
battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a
pre-defined area which displays the results as a 3D image on a computer?
There used to be a company in Texas that supplied such a kit in the
early 1980's. It involved placing 4 RX masts around a town and combining
the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>
> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2

Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

--------------2428246C390A
Content-Type: text/plain; charset=us-ascii; name="Ft50mods.txt"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="Ft50mods.txt"

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)

To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
----
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
----
^ Band-Set_Byte (Address 0CE7)

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database?
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any
specific country. That is why the ARS does not work any more, and not?
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise

field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in

front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

>
>Mike, N4PDY

Mike,

the AVC only works on AM, not CW or SSB. Had a 110 for over four years
and no one could get that to work. I recall something in the fine
print on the manual. The '110 does not use a product detector like
upper grade radios do... therefore the AVC is prone to overload from
BFO leakage. I have an HQ-180 and it works fine in that one.

Un fortunately, some people are afraid of freedom/responsability. Pirate
radio is a freedom of speech issue. I live in the 5TH larest media
market, with approx. 150 stations to select from. The stations are owned
by 5 corprations!!!! Not much selection, all stations sound the same.
Same country music, same rock music, same SYNDICATED talk show host, not
much to choose from. Out of 150 stations.I like the idea of local radio
activity, not some body with family problems in kansas, calling
Dr.Laura! Sad day when certian Americians put down the Idea of freedom ,
after all Who said resticting the airwaves is constitutoinal, I have a
freedom of speech, and a RIGHT to use it in any way, I should not need a
licence to use that right (By the way, licence = money) Thank you for
your time,responses encouraged, after all I would not want to infringe
on you freedom to speech, and I do not recomend puting down any ideas
opposed to mine.

Bob,

Extra would be OK and expected. The outrageous amount extra that they
charge isn't! They usually pack pretty poorly too, while we are at
it. We got two heavy broadcast tape machines in at our business the
other day in flimsey (for 43lb. machines anyway!) 200lb. test boxes.
Amazingly they were OK. If they hadn't been UPS wouldn't and
shouldn't have covered the damage.

Best Wishes,

Jon Hall

>

The first thing to question here is if MBE and UPS both quoted on the same type of delivery service. MBE stores often try to seel customers Next Day, Next Day 2, or Priority Deliveries. Then they will come down to Select and Ground rates.

I just sent my Alinco DX-70T for repair this past monday. Prices started at $71 for Next Day and went down from there. I decided on a $31 Select as a quick way to hopefully get the radio back before the XMAS rush. Tracking it on the UPS web site showed it not only delivered, but a whole day early.

Just yesterday I sent another package at MBE and was equally pleased with the service. I brought in a shoebox with HT, charger, several batteries, etc. By he time I had filled out the forms the guy had wrapped everything in bubblewrap, put them back in the shoebox and had selected a new outter box and peanuts to pack it all in. They charged $4 in packing materials plus a $1.50 fee for packing service. With additional insurance and packing the total bill Was #21

Having used a private shipper before I am ver impressed with my local Mail Boxes ETC store. The big difference is in a reasonable packing fee, not to mention very quick work.

You might try Surplus Sales of Nebraska. They have stocked a large
supply of Collins parts in the past.

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to
look at a price thats posted, and then make assumptions about it's
fairness, with *no* knowlege whatsoever about the specific items
that is being sold. They feel justified in commenting in some very
negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this
example, $15 is what I had to pay for that manual, separate from
the R4B, and, I had to look for it for weeks. The fellow that I
bought it from answered and inquiry from me about something else,
and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer
the matching manual with the rig, which, I'm am also selling at my
cost, it is just that nice. I would personally prefer to keep the
manual for myself, but I figure that a guy that gets a shiney new
R4B will enjoy the experience even more with an
pristine manual. Bill, if you saw them you'd know, the fellow that
bought these two items for $215 will be a friend for life...

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias
correctly!

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is

assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

From: Felix
Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio
to be available in the USA in Mid February 1998. I don't think it has
aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next
to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ
IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same
IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF

and then "SLOPE DSP
Tuning " in the ausio section.

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this
scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP

Tuning " in the ausio section.

Colin R. Wright wrote:

In looking at the chatter on the newsgroup about
this rig, I was

wondering if anyone had any comments/answers on the following:

- Removeable faceplate: It looks like this is not going to be
an

option, but I didn't see an "official" stance.

- Dual-band receive (i.e., monitor 2m and 6m call frequencies

simultaneously): Again, nothing "official" that I can find in
the

newsgroup.

- 222/1296 capable: Is it possible that either/both of these bands

could be included in the US model as add-ons (or just plain built in)?

- Will this rig do Mode A and Mode K satellite functions (2m up/10m

down or 15m up/10m down)?

- Is the FT-736 being discontinued due to this radio?

Thanks in advance!

Colin, K4SSO

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4
hours of battery life between recharges and be on a hike and run out
of juice. This again narrows the choices.. Plan on getting an
optional antenna cause the rubber duck antenna will work fine in

cities but the further away you get, the worse the performance till nothing.. Do you have adequate 70cm repeaters in your area to warrent the dual bander? If not, you can save a bundle of money that could go toward the mobile, by buying a single band radio.. Buy a single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all beginners at one time. I would suggest joining a Ham club in your area and asking the members for their opinion and experiences and they would be glad to show you their radios up close and in person and tell you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and mobiles... Hummmm, not much help am I?? I have a mixture of all four brands if that tells you anything, and each one does something a little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things about both... Like I mentioned above, if you are hiking far away from repeaters, I would want a radio that puts out 5+ watts and have a relatively large battery capacity, with a telescoping antenna... Do these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

Subject: Newbie Question / Mini receiver

Hello,

I_m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can_t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Richard

Hi,
I am looking for a heavy old nonwoking radio for my Son to play with!
Must be clean and safe: Knobs need to have set screws holding them on to
prevent removing and swallowing. He is only 21 months but loves to play
with my
working stuff.
I posted in boatanchor group first.
Thanks,
Jack

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

From: kc5mdm@iglobal.net
Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty)
condition. Said to be in use when the Ham became silent key 6 years ago.
Would restore to new and has spare 3-400 Z tube as well as the one in it.
$450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1
with power supply in separate case that is a bit larger. Have Dow Key
relay box for use with older rigs. I wont say it is working now, but its
obvious that it has and nothing is burned or looks bad. Would consider
trades for newer amps or HF gear, Im just not a collector and already
have an Alpha. Thanks, feel free to inquire about possible trades.
Murray

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting
or anything else very serious. It was a nice upgrade for me from a TS-450.
For what I want to do, it is a very nice rig at the right price. I am able
to hear and work a lot more dx with the 920, and 6M is a lot of fun when the
band is open.

Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt
transceivers that put out signals in the 10 watt range. Commercial class
aircraft use more expensive radios that run on higher electrical system
voltages and put out considerably more power. Control towers generally run
low
power because the stations they are talking to are all in the local area and a
thousand feet or more up in the air. If you want to hear distant towers
clearly, you may need to install a directional antenna with a mast-mount
preamp.

Hope that helps.

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

Subject: Impending HDTV....

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When that giant rolls over, all the lesser players have to pay attention. Of particular interest to amateurs, the final bandplan releases the spectrum currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed spectrum may be able to relax some of the pressures placed on amateur VHF/UHF allocations by the little LEOs, and others, desiring new spectrum below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable implications with regard to TVI susceptability. That also is of interest to amateurs. And it isn't all good news because broadcasters will be sharply reducing power, so over the air TV will become more of a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation and coding. But DTV will *not* use the sort of robust FEC which would make it immune to all types of interference (that would require more

bandwidth for the coding overhead than is available in a 6 MHz channel). And the 8VSB modulation chosen is also not an ideal choice for operation in the face of certain types of interference. If DTV is successful in luring many viewers away from cable, amateurs are bound to face new TVI challenges.

We may also see the reverse situation, IE DTVs interfering with amateur equipment. A DTV receiver will be more computer than TV, and we already know the RFI computers can generate. The sweep rates (and magnitude of sweep currents) for the large 16:9 HDTV displays will also produce a new level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be aware of how we are likely to be affected by these sweeping changes in the TV broadcast market. And we also have to be aware of who our new neighbors will be in the newly vacated TV spectrum. There may be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will have implications with regard to what will be cost effective for amateurs to adopt and adapt from it for our own uses. High speed RF modem technology will be sharply impacted by the mass market DTV receiver. A new generation of fast and cheap RF modems based on DTV technology could have a major impact on the sorts of operations amateurs may pursue at VHF/UHF.

>Just watch it!

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current
large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way. I know that it can be done if one "activates" a jumper. But, there are two questions: 1 - Where is the jumper? 2 - What are the programming steps? (I believe that it is similar to programming a scanner, but I have no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE reply via e-mail (at least cc me via e-mail) as I do not have access to a news server that carries this group.

Thanks,
Richard

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

Tel 65-536-3559

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen

that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL

Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage
HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S

which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who has any experience with this rig to give me some additional feedback on it's performance and user satisfaction. Thanks in advance.

From: David Rogers <drogers0@mailexcite.com>
Subject: Seeking: 2-Meter and 440Mhz HT

If any one can offer me a Handheld Ham Radio that works at 2-Meters or 440-Mhz, I prefer a Radio Shack but all solid equipment is good.
I'm also looking for a set of Ham Radios that work at 1300-Mhz, for Data Packet.

Thanks, E-Mail me if you have any information or suggestions.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

Maybe what we need are a number of relatively inexpensive (under $150) kits
for this band.

From: Arne Nilsson <sm6vr.arne@mailbox.swipnet.se>
Subject: IC706

I would like to connect my home made antenna tuner to the IC706 and get
it working via the "tuner/call" button. Does anyone know the
specifications for the Accessory connector or the connector for AH-3?
How does the IC706 detect that a tuner is connected?
The manual is not very useful.

Dear Mr. xxxxxx:

Thank you very much for your e-mail, dated November 26, 1997, requesting
information on the FT-847.

Unfortunately, there is no English brochure available on the FT-847 yet,
but one is expected shortly.

For your convenience, we invite you to contact our subsidiary, YAESU
USA, at the following address. You will be able to obtain a brochure
directly from them, once they become available. As well, they will be

happy to help you with any concern or question that you may have.

Hello Corey,
I sure would like to know the version number of the CPU in that radio
and the serial number......
The mod does not work in 3 radios I have tried here. Beyond that,
Destina is displayed on F-33 not F-35.

There are preamp projects in The Satellite Experimenter's Handbook, The
Proceedings of the Central States VHF Society, and The VHF/UHF Dx Book,
among other places. There are also suitable designs in *older* ARRL Handbooks.
There was recently a MMIC preamp in QST, but that won't have a low enough
noise figure to improve on an ordinary receiver at 70 cm. A few suitable
preamps
have appeared in QEX. You really want a GASFET design. Far Circuits offers
circuit boards for some of these preamp projects.

There are a number of companies which sell preamps. SSB Electronics and
Advanced Receiver Research are well known, and make good ones. Expect
to pay from $80 to nearly $200 for these, however. One of the few Hamtronics
kits worth buying is their helically filtered 70 cm preamp. This is a good
unit,
and fairly cheap too. Forget the Ramsey junk.

Subject: How much power do aircrafts TX?

On 5 Dec 1997 04:27:41 GMT, kn6epsac@aol.com (KN6EPSac) wrote:

>Been curious about this for a long time. WHY is all aircraft Tx AM and not
FM?

It is primarily just a historical artifact. Back when they started putting
radios in airplanes, AM was the dominant voice mode, so the radios
were AM. Inertia, and a very large installed base, has kept it that way.
AM is generally "good enough" for air to ground communications, and
it does fit in a somewhat smaller amount of spectrum than FM.

There are a couple of other incidental benefits as well. The constant
AM carrier makes DFing fairly easy. And there is no FM capture
effect, so doubling is detectable, and often one can copy both signals
rather than just the stronger one. This has a safety benefit. AC could
switch to SSB, and they have for long HF circuits, but that loses the
ability to DF the signals easily because of the lack of a constant
carrier.

Replacing 570S Battery

Go to your local battery supplier and get a CR2032 Lithium Battery. RS
and most drug stores carry them.

Do the following in exact order.
1. Remove the top and bottom covers.
2. Remove the two brass-colored screws at each side of the top side
brackets holding the front panel to the main chassis. Loosen the two
brass-colored screws at the side bottom brackets (with a slot on each
side) holding the front panel.

3. Hook up the power supply to the radio and turn on the power supply.
4. Turn on the radio and then turn it off (leave the power supply on)
5. Slide the front panel forward and tilt it down and the battery can be seen in it's holder---most likely a black plastic holder. Replace the battery.
6. Turn on the radio and turn it off.
7. Replace screws and covers and you're back in business.

Subject: lightning strike detection

Does anyone know of a system for detecting lightning strikes within a pre-defined area which displays the results as a 3D image on a computer? There used to be a company in Texas that supplied such a kit in the early 1980's. It involved placing 4 RX masts around a town and combining the info from all 4 to generate a 3D map.
Any suggestions?

David Shenton.

Some FACTORY.TPL will not be usefull to you, you will probably
not be able to upload it (who knows what mod you are in)

> p.s. Yes, I did turn the squelch off when trying to upload.
> No hardware mods have been done.
>
> Any help would be appreciated.
>
> Larry
> N1ZGI

Do as follows:

Find e HEX editor.

1. Start the FT50 Programmer and save this as BLANK.RDF
(Start and save (BLANK.RDF is a empty .RDF))
2. Make a Template from your FT50, name it MY.TPL
3. Read from the MY.TPL the bytes on adress 05E2 and 05E3
(let's call them value1 and value2)
4. Edit the BLANK.TPL and set the byte on adress 05E2 to be
value1 and the byte on adress 05E3 to be value2
Change the first 3 letters in BLANK.RDF from RDF to TPL
5. Rename BLANK.RDF to BLANK.TPL
6. Upload the BLANK.TPL to the FT50

Everything will be normal now.

Don't play with the "Pull the cable out method"

Read the following info:

--------------2428246C390A
Content-Type: text/plain; charset=us-ascii; name="Ft50mods.txt"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="Ft50mods.txt"

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==========
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX

^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if
you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.

Example
.....
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.?
- power off, power on, now you have BAND_B2a, DONE.

and so on ...

Here are the MOD's (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
---
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I
---
^ Band-Set_Byte (Address 0CE7)

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 600-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country

your unit is configured (A,B,C,D & H) it is using the repeater database?
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any
specific country. That is why the ARS does not work any more, and not?
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

Date: 5 Dec 97 17:07:58 GMT
From: sca00135@mail.wvnet.EDU (Sam Hall)
Subject: Kachina comments

It seems like there is quite a bit of interest in the Kachina 505 with requests for information. I have operated the 505 for a couple months and offer the following as my initial impressions. I have been somewhat hesitant reporting on the 505 as I don't want to mislead anyone about the rig. Please accept the following for what it is and nothing more. Remember, one man's trash is another man's treasure, what I like or dislike may be totally different from another perspective. I bought the 505 primarily to remote control at a site 7 miles from my home. I am told the telephone modem will be available after the first of 1998 and can't wait to operate the 505 remotely.

First, the caveats, I am not an engineer, I have not used any sophisticated test equipment (only my eyes and ears) , my total operation time amounts to about 10 hours involving DX, casual contesting and rag chew. I operate about 90% CW and 10% SSB. When possible I tried to compare the 505 with a 1000MP sitting side by side in an A/B configuration.

Generally, the 505 is not Dick Tracy's wrist TV, what it is a very good HF Transceiver. The look, feel and operation is "different", not necessarily better or worse than top of the line YaWoodCom's, but subjectively different.

I can not hear any difference in the receiver sensitivity between the 505 and the 1000MP. The filters in the 505, ranging from 100 Hz to 3.5 KC are very effective and seem to be truly "brick wall" effective. The 505 filters are definitely better than the 1000MP. Off frequency interference heard on the 1000MP is totally eliminated with the 505. Also, the narrow

settings (100 and 200 Hz) seem to produce less "ringing" in the 505.

The variable AGC speed capability in the 505 is great. I had no idea what a difference AGC speed made on received signals and receive fatigue. I find myself often adjusting the AGC for given band conditions. Very good feature in the 505.

The DSP is a mixed bag. Describing the DSP operation is quite difficult. First, it is very effective in reducing noise levels. However, when engaged it makes the receive audio somewhat "strange" and difficult to understand weak SSB signals. The more I listen to it the better I can understand the SSB audio. Stronger SSB signals are much easier to listen to and understand. The DSP is wonderful for CW. There seems to be very little, if any, effect on the sound of a CW signal while considerably reducing the noise levels. There is a variable "Noise Reduction Level", but I can't tell much difference in the minimum and maximum settings. There does seem to be a correlation between the "Noise Reduction Level" and the AGC speed. I need to play with this combination a little more before I can form any opinion. Overall, I find the DSP very useful for SSB and outstanding for CW.

On the subject of noise, the 505 does not have a "Noise Blanker" as most other HF rigs have these days. Living in a high power line noise field, a "Noise Blanker" is critical for my operation. The lack of this feature in the 505 is definitely a minus for the rig. Also, I don't believe the notch filter in the 505 is as effective as the 1000MP. The 1000MP notch filter is not the best out there for my taste so the 505 is definitely lacking in that department. The DSP does lessen he power line noise, with the side effects stated.

One entirely subjective comparison between the 505 and the 1000MP is the overall receive audio. The general noise audio in the 505 sounds higher pitched and raspy to me, while the same noise level in the 1000MP sounds more "mellow" . For me, this results in the 1000MP being a little easier to listen to, especially in high noise and weak signal conditions. The "edge" is taken off the 505 by moving the IF shift -200Hz.. Probably shouldn't even comment on this point because it is entirely subjective and perhaps without merit.

The transmitter seems to be as advertised. I find my best audio reports are with the "Tx Eq" at the maximum bass setting with a Heil microphone. I haven't used the rig for SSB enough to comment, other than to say I have not had any negative audio reports.

The CW "Dynamics" adjustment is a very nice feature. I understand that the adjustment actually varies the CW waveform from soft to hard. CW ops will appreciate this feature. Also, the sidetone is activated by pressing the spacebar with the sidetone volume easily adjusted by keystroke or mouse. Much easier to spot the receiver on frequency than the 1000MP. The numerous other TX features of the 505 are all as advertised and don't need my impressions. The built in tuner is very fast and seems to work fine. The Smith Chart antenna impedance data seems to work fine and is a

feature I really like. Another feature I particularly enjoy is the "Band Sweep" display. Performs as advertised and is useful for quickly looking at band activity especially for 10 and 15 meters.

The control software is very, very good. I have used various CAT programs to control the 1000MP and other HF rigs with some programs being better than others. It is obvious the 505 software developers have spend a lot of time making the software intuitive and easy to use. I generally prefer keyboard control rather than mouse control. The keystrokes required to control the rig are minimal and quickly learned. Mouse control is point and click (and sometimes slide). The primary operating controls are accessible directly form the operating screen. Some lesser used controls are accessed only from drop down menus therefore requiring an extra keystroke or mouse click. I prefer every control being accessible directly from the operating screen and hope future software revisions provide for this. One point that deserves mentioning is the operation of the 505 is different than what you are used to with conventional radios. It took me several hours of operation to get the "feel" for using a keyboard to control a HF transceiver. Didn't really like it much at first (having used dials, knobs and switches for 35 years) but have now grown used to it and find in many respects it is easier to operate than the 1000MP. However, there is a certain primal quality to having the rig with it's knobs in front of you on the operating bench. Also, remember that you will have to have a computer monitor running at all times and if your monitor is like mine, it is RFI dirty. I find this a real problem and am in the process of trying everything I can to clear up some of the interference. There is an extension cable available for the 505 which would allow separation of the radio from the computer which may be one possible fix for monitor noise but I prefer to have the computer and rig together. If anyone has any advice as to a brand of monitor that is RFI free, I would really appreciate the information.

This has gone much longer than I had planned. Hope I have answered some questions. Overall, I find the 505 an excellent HF Transceiver with the exception of the notch filter, lack of noise blanker and pitch/tone (for lack of a better description) of general band noise. Many features of the 505 I like better than the 1000MP. The major pluses are the Band Pass Filters, DSP for CW operation, adjustable AGC, CW adjustments, Band Sweep, Smith Chart impedance data, American made with customer support that is truly exceptional, but that is another story.

I would be happy to answer any questions anyone might have and if you want to stop by my QTH in southern West Virginia for a hands on demonstration just drop me an EMail. 73's, Sam--K8WVA--

Neither does the radio cover the UK 4m band (70.0 to 70.5 Mhz).

>
>Mike, N4PDY

Mike,

the AVC only works on AM, not CW or SSB. Had a 110 for over four years
and no one could get that to work. I recall something in the fine
print on the manual. The '110 does not use a product detector like
upper grade radios do... therefore the AVC is prone to overload from
BFO leakage. I have an HQ-180 and it works fine in that one.

Richard,

Go ahead and get the Sony if you like it. My past experience with
their shortwave radios has been good. I'd much rather see you buy a Sony
as opposed to a Sangean unit. I have a Sangean ATS-803A (Realistic
DX-440) and it's a very nice radio, but I get interference something
horrible from our TV and FM transmitters. I live about 15 miles from the
antenna farm in Cedar Hill, Texas....that's really bad......Good Luck
with your choice....de Todd KB5TMD.

Date: 3 Dec 1997 04:44:59 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've
seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

From: Phil Wheeler
Subject: QRP rig OHR100 vs. Norcal 40a

Daniel,

I've built the NC-40A and the Sierra, as well as an OHR-400.

A big plus of the OHR I built was that the torroids came pre-wound; the
NorCal radios required me to wind the torroids (over 40 for the Sierra).

The OHR-100 may be easier for you to build, tho the NC-40A will likely
draw less power and be lighter (nice for backpacking!).

OHR-100 may also give you better freq coverage; dunno personally, since
I have not read the OHR-100 specs.

Both Wilderness Radio (NC-40A) and Oak Hills Radio (OHR) are very good
to deal with.

Phil

Subject: Packet Radio on IC T2A?

Hi,
Does anyone know if you can do packet radio on Icom T2A 2 metre radio?

End of Ham-Equip Digest V97 #1486
****

Date: Sat, 06 Dec 1997 21:46:34 -0800
From: Michael Aust
Subject: IC-746 Spectrum Scope Thoughts/Comments

The IC-746 is on the back cover of the AES catalog, it
really looks like the 706Mark II, but with tuner built in,
DSP, and a 100watt amp for 2meters, which is really that they
extened the hf to 6mtr PA to now to go from Hf to 2mtrs.

I think Icom would like to led you believe the Spectrun Scope
is real time(meanining you can watch the Spectrum Scope at the same
time while listening to the radio (exacly like the IC-756 or IC-781).
I seriously doubt that is the case.

To at the same time, in order to do this, they need two VCO's ,
one for listening, one for the scope.

The Spectrum Scope sweep is probably the same sweep speed as in
the IC-706 Mark II.

The 706 Mark II and IC-746 sweep is faster, than the IC-756, but
I think it is not a fair statement, since the IC-781 scope is near
real time, while the Ic-756 is a near second.

The Spectrum Scope is no Hewlett Packard Spectrum Analyzer, but
a handy gadget to see band activity.

Any other thought welcome.

73

Mike

Bill (N5WRX) -

Some guys on the net (the price police for example) are willing to
look at a price thats posted, and then make assumptions about it's
fairness, with *no* knowlege whatsoever about the specific items
that is being sold. They feel justified in commenting in some very
negative terms about something they truly don't know about.

I don't always get my parts in nice, matched sets. In this
example, $15 is what I had to pay for that manual, separate from
the R4B, and, I had to look for it for weeks. The fellow that I
bought it from answered and inquiry from me about something else,
and wasn't even planning on selling it until I asked.

Sooooo, as a *courtesy* to the fellow that buys my R4B, I offer
the matching manual with the rig, which, I'm am also selling at my
cost, it is just that nice. I would personally prefer to keep the
manual for myself, but I figure that a guy that gets a shiney new
R4B will enjoy the experience even more with an
pristine manual. Bill, if you saw them you'd know, the fellow that
bought these two items for $215 will be a friend for life...

No, it is Class C biased and will not do SSB as it normally is wired..
IF you wired a bias ckt to the base of the xstr, it would do Class B or
AB and work on SSB...but if you dont know how to do it, get someone
who DOES....you CAN and WILL blow the xstr up if you dont set the bias
correctly!

Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

From: Felix
Subject: FT-847 (again!)

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio
to be available in the USA in Mid February 1998. I don't think it has
aremote faceplate
or built in tuner. There is an optional "FC-20" tuner that will sit next
to the radio. No price
but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.
There are two optional Collins Mechanical filters in the second 45 KHZ
IF. One is
2.75 KHZ and the other one is 500 HZ. It appears this radio has the same
IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736
Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847
has some stuff specifically for satalite work (alpha Tagging)?
The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.
The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION and
has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746 has
a built in
AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP
Tuning " in the ausio section.

The Radio FT-847 is now on the Yaesu USA Web Page and it says to expect
the radio

to be available in the USA in Mid February 1998. I don't think
it has aremote faceplate

or built in tuner. There is an optional "FC-20" tuner that will sit
next to the radio. No price

but Yaesu makes a FC-10 for the FT-840 radio and that unit costs $380
for comparison.

There are two optional Collins Mechanical filters in the second 45
KHZ IF. One is

2.75 KHZ and the other one is 500 HZ. It appears this radio has the
same IF scheme as the FT-900CAT (70 MHZ 1st IF and 455 KHZ 2nd IF). I believe
that the FT-736

Satallite radio will be discontinued as soon as this radio hits the
store shelves. The FT847

has some stuff specifically for satalite work (alpha Tagging)?

The price I believe will be $1700 to $1800 USA Tuner $400 plus the
filters etc.

The Icom 746 will cost $1600 to $1700 USA and is TRIPLE CONVERSION
and

has 100 watts on 2 MTRS but no 70CM capabilities. ALso the ICOM 746
has a built in

AUTOTUNER plus a SPECTRUM SCOPE very much like the IC-756 but this
scope

operates faster but has less resolution. Also, the IC-746 has TWIN
PASSBAND TUNING inthe IF stages. THe Yaesu has IF shift for the 2nd IF
and then "SLOPE DSP

Tuning " in the ausio section.

Colin R. Wright wrote:

In looking at the chatter on the newsgroup about
this rig, I was

wondering if anyone had any comments/answers on the following:

- Removeable faceplate: It looks like this is not going to be
an

option, but I didn't see an "official" stance.

- Dual-band receive (i.e., monitor 2m and 6m call frequencies

simultaneously): Again, nothing "official" that I can find in
the

newsgroup.

- 222/1296 capable: Is it possible that either/both of these bands

could be included in the US model as add-ons (or just plain built in)?

- Will this rig do Mode A and Mode K satellite functions (2m up/10m

down or 15m up/10m down)?

- Is the FT-736 being discontinued due to this radio?

Thanks in advance!

Colin, K4SSO

Subject: HELP!! I need some advice on my first radio (HT) purchase!

KB4UTZ@yahoo.com wrote:

>I need some help from those of you with handy-talkie (HT) experience.

>I just passed my Tech Plus exam and am now in the process of choosing my
>first radio. I enjoy hiking, camping, and backpacking so I am currently
>leaning toward getting a dual 2m/70cm HT rig as opposed to a mobile rig. I
>do plan on listening/using the radio during my daily commute of about 25
>miles into metro Atlanta (Georgia) also though.

Kirby,

You will "sooner" than "later" acquire both a HT and a mobile because
both have their advantages and disadvantages. Nothing wrong with
picking up the HT first. Since you mentioned you like hiking (far
away from a repeater?) , I would steer or lean toward a radio that has
the potential of putting out 5+ watts. This narrows down the field.
At 5 watts, then I would see which radio has or can get the larger
battery so you have more air time. No fun having a radio with 2-4
hours of battery life between recharges and be on a hike and run out
of juice. This again narrows the choices.. Plan on getting an
optional antenna cause the rubber duck antenna will work fine in
cities but the further away you get, the worse the performance till
nothing.. Do you have adequate 70cm repeaters in your area to
warrent the dual bander? If not, you can save a bundle of money that
could go toward the mobile, by buying a single band radio.. Buy a
single band radio(s) now and expand into the 70cm band later?

>My specific questions are:

>1. What radio would you recommend for a 2m/70cm beginner like me? Mobile
>or handheld? Why?

See my statement above. You will eventually get both. We were all
beginners at one time. I would suggest joining a Ham club in your
area and asking the members for their opinion and experiences and they
would be glad to show you their radios up close and in person and tell
you all the pros-cons of each...

>2. Depending upon the answer to #1, what radio(s) would you recommend and
>why?

Icom, Yaseu, Kenwood, Allinco all make good radios, both HT's and
mobiles... Hummmm, not much help am I?? I have a mixture of all four
brands if that tells you anything, and each one does something a
little better than the others, but none are bad.

>3. As I stated before, I am leaning toward a handheld... in particular
>possibly either the Yaesu FT-50RD or the Kenwood TH-G71A since they both
>have the MIL-STD 810 rating. Would either of these two radios be a good
>choice? Would one be preferable over the other? Why? What are the pros
>and cons of each radio? Or... should I forget these two radios and
>consider something else altogether?

Good choices. I have not owned either, but have heard good things
about both... Like I mentioned above, if you are hiking far away from
repeaters, I would want a radio that puts out 5+ watts and have a
relatively large battery capacity, with a telescoping antenna... Do
these models have that ability??? Check the catelogs.

>4. Are there certain radio manufacturers that I should stick with (or
>conversely avoid) in consideration of radio quality, frequency of repairs
>needed, etc.?

Icom, Yaseu, Kenwood, Allinco all make good radios.

>Thank you in advance for any assistance you can provide.

>Kirby Davis (KB4UTZ)

Subject: Newbie Question / Mini receiver

Hello,

I_m a complete beginer to shortwave, but I did like to buy a very
small receiver for traveling.

I want to use it, to be informed in remote places and countrys where
you can_t rely on public avaible informations.

I could get a Sony ICF-SW 1E, which has the size i would like, but is
it a good shortwave receiver?

Are there alternatives to this receiver?

Richard

Hi,
I am looking for a heavy old nonwoking radio for my Son to play with!
Must be clean and safe: Knobs need to have set screws holding them on to
prevent removing and swallowing. He is only 21 months but loves to play
with my
working stuff.
I posted in boatanchor group first.
Thanks,
Jack

I have a pristine ICOM 775 DSP serial number 1948 with both CW and both SSB filters, voice synth unit and high stability crystal unit. I also have an SM-20 mic and the matching SP-20 speaker. This a top of the line radio that I've had since new, and I'll sell for $2,500 everything included or $2,300 for the radio only without the SM-20 and SP-20. You pay actual shipping.

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

Subject: FS: Hallicrafters "Loudenboomer Mk II a Amp

This amp has been stored for a while but is in real nice (dusty)
condition. Said to be in use when the Ham became silent key 6 years ago.
Would restore to new and has spare 3-400 Z tube as well as the one in it.
$450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1
with power supply in separate case that is a bit larger. Have Dow Key
relay box for use with older rigs. I wont say it is working now, but its
obvious that it has and nothing is burned or looks bad. Would consider
trades for newer amps or HF gear, Im just not a collector and already
have an Alpha. Thanks, feel free to inquire about possible trades.

Subject: FT-920 vs FT1000mp

I bought the FT-920 and really like it. Of course I don't do any contesting or anything else very serious. It was a nice upgrade for me from a TS-450. For what I want to do, it is a very nice rig at the right price. I am able to hear and work a lot more dx with the 920, and 6M is a lot of fun when the band is open.

Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt transceivers that put out signals in the 10 watt range. Commercial class aircraft use more expensive radios that run on higher electrical system voltages and put out considerably more power. Control towers generally run low
power because the stations they are talking to are all in the local area and a thousand feet or more up in the air. If you want to hear distant towers clearly, you may need to install a directional antenna with a mast-mount preamp.

Hope that helps.

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

Subject: Impending HDTV....

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When
that giant rolls over, all the lesser players have to pay attention. Of
particular interest to amateurs, the final bandplan releases the spectrum
currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed
spectrum may be able to relax some of the pressures placed on amateur
VHF/UHF allocations by the little LEOs, and others, desiring new spectrum
below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable
implications with regard to TVI susceptability. That also is of interest
to amateurs. And it isn't all good news because broadcasters will
be sharply reducing power, so over the air TV will become more of
a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation
and coding. But DTV will *not* use the sort of robust FEC which would
make it immune to all types of interference (that would require more
bandwidth for the coding overhead than is available in a 6 MHz channel).
And the 8VSB modulation chosen is also not an ideal choice for operation
in the face of certain types of interference. If DTV is successful in luring
many viewers away from cable, amateurs are bound to face new TVI
challenges.

We may also see the reverse situation, IE DTVs interfering with amateur
equipment. A DTV receiver will be more computer than TV, and we already
know the RFI computers can generate. The sweep rates (and magnitude of
sweep currents) for the large 16:9 HDTV displays will also produce a new
level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be
aware of how we are likely to be affected by these sweeping changes
in the TV broadcast market. And we also have to be aware of who our
new neighbors will be in the newly vacated TV spectrum. There may
be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will
have implications with regard to what will be cost effective for amateurs
to adopt and adapt from it for our own uses. High speed RF modem
technology will be sharply impacted by the mass market DTV receiver.
A new generation of fast and cheap RF modems based on DTV
technology could have a major impact on the sorts of operations
amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current

large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way.
I know that it can be done if one "activates" a jumper. But, there are
two questions: 1 - Where is the jumper? 2 - What are the programming
steps? (I believe that it is similar to programming a scanner, but I have
no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE
reply via e-mail (at least cc me via e-mail) as I do not have access to a
news server that carries this group.

Thanks,

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

(whether you are concerned investor/hedger or speculator, this info can change your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply rooted affair with their economic background, as well as their future prospects, expectation of further defaults by banks and companies exposed to Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of local Asian currencies. The Hong Kong dollar, been the only one not affected as yet, due to excessive monitoring of levels by the HKMA, speculation has now risen
that the next couple of weeks should show the HK dollar its proper level, to some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter whether Equity, Debt, Agricultural, Asian, European, North American, where-so-ever-what-so-ever, When badly affected Asian markets collapse, they send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be deriving their profits from Asia, selling or buying products & services with Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL

Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
+ HI/LO power switch
+ External Mic/Speaker
+ 11v, 500ma NICAD battery (last replaced 9/14/91)

Crytals included: 146.520, 146.670, 147.285, 147.165, 146.625 and
147.060 MHz

$35 plus shipping

If you're interested, please send e-mail to gabrown@bellsouth.net

From: Eric Trowbridge <jbart@bigsky.net>
Subject: GO CODE !!! GO CODE !!!

I am so happy that code is a requirement for the best portions of the
Amateur radio spectrum that I wish that there would be more testing that
required code. GO CODE, GO CODE Onward and most of all upward learn it
or stay on the frequencies that are more appropriate for you so that you
can't propagate bad and poorly referenced information about code.
Fortunately anyone that has done the code and is on the H.F. frequencies
never complains about learning it, they may not use it but they don't
complain. Notice the people who complain about it have to do it on the
internet because the frequencies that they use won't get the job done
otherwise, as for their belly-aching and complaining mentality so what,
learn code or stay off H.F. simple isn't it. GO CODE !!! GO CODE !!!

Eric KC7YGH
Code knowledge and proud of it!!!

From: moler@battelle.org
Subject: Opinions of TS-680

I'm considering purchase of a Kenwood TS-680S. This is a general coverage
HF transceiver and covers 160m-6m. It is the twin to the Kenwood TS-140S
which doesn't cover 6m.

I have seen the review done in QST in Oct 1988, but I'd like anyone who
has any experience with this rig to give me some additional feedback on
it's performance and user satisfaction. Thanks in advance.

Most large electrical supply houses will carry them. The one I like is made
by Delta Arrestors of Big Spring Texas. Cheap and effective. But there are
others.

>We thank you for your support of our products. We remain,
>
>Yours very truly,
>
>YAESU MUSEN CO., LTD.

Perhaps the reason they couldn't provide English information on the FT 847
is because they are marketing an FT 846 here in the US ??

I always heard a picture is worth a thousand words, and I have seen
pictures (not drawings) of the FT 846.

Looks to me like Yeasu Marketing doesn't know what their own manufacturing
is doing.

Date: 3 Dec 1997 04:44:59 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: 17.9 MHz IF?

Just opened up the case of a Motorola HT, operating on 138.960 MHz.
The rcv crystal is marked 52286.66 (=52.28666 MHz). It's third multiple
lands at ~156.86 MHz. This implies the rcvr's IF is 17.9 MHz. Is this
a common IF for Mot VHF-high band gear?

Will this radio be easy to recrystal for 146 MHz?

(The transmit crystal is marked 46.320 MHz; the frequencies of these
crystals are not fundamental, correct?)

Thanks in advance!
Jeff KH2PZ

Gary, I guess you didn't comprehend the basic message in my unofficial
communique. I'll reiterate, don't give them any ideas or ammunition in
they're quest for the domination of the worlds communications.
Bill Gates likes to play monopoly not as a board game, but as a global
game.

Isn't just amazing how much range one can get out of a radio when it's
antenna is at 10 or 20 Thousand Feet, even with just a few watts.

Procomm, Procomm Plus, Telex, QModem, or ANY other Terminal program will
get the job done. However... you may be required to tell the program
just what COM port and IRQ the TNC is on. The same advice holds true
for PaKet, TPK, WinPack, Sally, etc. The ONLY terminal program that I've
seen that was really fussy was Kantronic's Kanterm that comes packaged
with their TNC's. Wants to see COM 1 or COM 2 only.

I had the same problem. Was a bad plated through hole on the bias
board. Easy fix. The board is the oone next to the final cage. Pull
the tubes and check the bias voltage. You will find it on one side of
the board and not the other.

Later.

From: k1bqt@aol.com (K1BQT)
Subject: How much power do aircrafts TX?

Hi--

Depends upon the type of aircraft. Small private aircraft use small 12-volt
transceivers that put out signals in the 10 watt range. Commercial class
aircraft use more expensive radios that run on higher electrical system
voltages and put out considerably more power. Control towers generally run
low
power because the stations they are talking to are all in the local area and a
thousand feet or more up in the air. If you want to hear distant towers
clearly, you may need to install a directional antenna with a mast-mount
preamp.

Hope that helps.

>snip<

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality

prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained. Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

On Tue, 02 Dec 1997 12:21:22 -0600, K0HB@JUNO.COM wrote:

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When that giant rolls over, all the lesser players have to pay attention. Of particular interest to amateurs, the final bandplan releases the spectrum currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed spectrum may be able to relax some of the pressures placed on amateur VHF/UHF allocations by the little LEOs, and others, desiring new spectrum below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable implications with regard to TVI susceptability. That also is of interest to amateurs. And it isn't all good news because broadcasters will be sharply reducing power, so over the air TV will become more of a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation and coding. But DTV will *not* use the sort of robust FEC which would make it immune to all types of interference (that would require more bandwidth for the coding overhead than is available in a 6 MHz channel). And the 8VSB modulation chosen is also not an ideal choice for operation in the face of certain types of interference. If DTV is successful in luring many viewers away from cable, amateurs are bound to face new TVI challenges.

We may also see the reverse situation, IE DTVs interfering with amateur equipment. A DTV receiver will be more computer than TV, and we already know the RFI computers can generate. The sweep rates (and magnitude of sweep currents) for the large 16:9 HDTV displays will also produce a new level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be
aware of how we are likely to be affected by these sweeping changes
in the TV broadcast market. And we also have to be aware of who our
new neighbors will be in the newly vacated TV spectrum. There may
be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will
have implications with regard to what will be cost effective for amateurs
to adopt and adapt from it for our own uses. High speed RF modem
technology will be sharply impacted by the mass market DTV receiver.
A new generation of fast and cheap RF modems based on DTV
technology could have a major impact on the sorts of operations
amateurs may pursue at VHF/UHF.

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of

sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

>other countries implementing this standard?

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is

way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three
standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current
large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Subject: Programming a Regency RH256B VHF 2-way?????

Hello filks,

I need some assistance with self-programming a Regency RH256B VHF 2-way.
I know that it can be done if one "activates" a jumper. But, there are
two questions: 1 - Where is the jumper? 2 - What are the programming
steps? (I believe that it is similar to programming a scanner, but I have
no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. PLEASE reply via e-mail (at least cc me via e-mail) as I do not have access to a news server that carries this group.

Thanks,
Richard

TV sound is 25 kHz deviation, which requires a receiver bandwidth of 55 kHz.
FM broadcast is 75 kHz deviation, which requires a receiver bandwidth of
165 kHz, and is spaced on 200 kHz channel centers to provide some guard
band protection. The FT50 wide-FM mode can handle TV sound, but is too
narrow for FM broadcast. That should make it satisfactory for Wx sat pix.

Tel 65-536-3559

(whether you are concerned investor/hedger or speculator, this info can change
your strategy on the way you do your investments)

The aftermath of regional Asian stock markets, is going to have a much deeply
rooted affair with their economic background, as well as their future
prospects, expectation of further defaults by banks and companies exposed to
Forex & equity e
xposure is on the cards.

Some have connected these problems with major hedge fund aggressive selling of
local Asian currencies. The Hong Kong dollar, been the only one not affected
as yet, due to excessive monitoring of levels by the HKMA, speculation has now
risen
that the next couple of weeks should show the HK dollar its proper level, to
some dealers its seen as HK$ 10-15 to the greenbuck (US=1), once its current
peg gives way.

Now where does the forces of Chain reaction leaves the other markets no matter
whether Equity, Debt, Agricultural, Asian, European, North American,
where-so-ever-what-so-ever, When badly affected Asian markets collapse, they
send a chill thr
ough major Stock Exchanges around the globe, there has always been
a relatively of connections as for example a company in Europe or USA may be
deriving their profits from Asia, selling or buying products & services with

Asia. Billion dollar fund management advisers dump stocks on a regional basis, and look
out for warning signs on a global basis, this fact is evident by looking at the 87 crash or this year's 1997 repeat.

Portfolio's are re-positioned for long term prospects, or for the better of risk management, with this complete change of strategy, where does all this big money do to the unexposed Investor, it could either be an great opportunity or disast
er for the uninformed
investor.

There are ways and means whereby an investor can protect his exposure by trading Futures contracts with PHILLIP GNI FUTURES PTE LTD, AND FOR THIS WE HAVE A SPECIAL
REPORT : INTRODUCTION TO THE FINANCIAL MARKETS & TRADING OPPORTUNITIES IN COMMODITY, CURRENCY & FINANCIAL FUTURES. (Available on request)

Subject: Butternut 2mtr Tuning?

Hello,

I have a Butternut 2meter trombone base antenna, but I am having trouble getting the SWR down. Does anyone have the tuning information for the gamma match?

Any information would be appreciated.

Thanks!

This is a multi-part message in MIME format.

--------------54DA3C953D9A
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

FOR SALE: Wilson Mark IV VHF Handheld Transceiver ($35 + shipping)

This is an older VHF (2 meter) ham radio (see attached picture below).
Would make an excellent portable backup, emergency or packet radio. The
radio is in working condition, however, I do not have the antenna,
charger or owner's manual. It features:

+ 6 channels (crystal controlled -- see frequencies below)
+ Tone squelch decode
+ DTMF keypad (touch tone dialer)
